AGENDA
CAPITOLA PLANNING COMMISSION
Thursday, June 4, 2020 – 7:00 PM

Chairperson Ed Newman
Commissioners Courtney Christiansen
Mick Routh
TJ Welch
Peter Wilk

NOTICE OF REMOTE ACCESS ONLY:

In accordance with the current Shelter in Place Order from Santa Cruz County Health Services and Executive Order N-29-20 from the Executive Department of the State of California, the Planning Commission meeting will not be physically open to the public and in person attendance cannot be accommodated.

To watch:
2. Spectrum Cable Television channel 8
3. Zoom Meeting (link and phone numbers below)

To participate remotely and make public comment:
1. Send email:
   a. As always, send additional materials to the Planning Commission via planningcommission@ci.capitola.ca.us by 5 p.m. the Wednesday before the meeting and they will be distributed to agenda recipients.
   b. During the meeting, send comments via email to publiccomment@ci.capitola.ca.us
      ▪ Identify the item you wish to comment on in your email’s subject line. Emailed comments will be accepted during the Public Comments meeting item and for General Government / Public Hearing items.
      ▪ Emailed comments on each General Government/ Public Hearing item will be accepted after the start of the meeting until the Chairman announces that public comment for that item is closed.
      ▪ Emailed comments should be a maximum of 450 words, which corresponds to approximately 3 minutes of speaking time.
      ▪ Each emailed comment will be read aloud for up to three minutes and/or displayed on a screen.
      ▪ Emails received by publiccomment@ci.capitola.ca.us outside of the comment period outlined above will not be included in the record.
2. Zoom Meeting (Via Computer or Phone)
   a. Please click the link below to join the meeting:
      - https://us02web.zoom.us/j/82577336097?pwd=Q0ZpQTJTOWkyZ3h1dXF5Y1Jib0ozUT09 (link is external)
      - If prompted for a password, enter 818089
      - Use participant option to “raise hand” during the public comment period for the item you wish to speak on. Once unmuted, you will have up to 3 minutes to speak
   b. Dial in with phone:
      - Before the start of the item you wish to comment on, call any of the numbers below. If one is busy, try the next one
        - 1 669 900 6833
        - 1 408 638 0968
        - 1 346 248 7799
        - 1 253 215 8782
        - 1 301 715 8592
        - 1 312 626 6799
        - 1 646 876 9923
      - Enter the meeting ID number: 825 7733 6097
      - When prompted for a Participant ID, press #
      - Press *6 on your phone to “raise your hand” when the Chairman calls for public comment. It will be your turn to speak when the Chairman unmutes you. You will hear an announcement that you have been unmuted. The timer will then be set to 3 minutes.

REGULAR MEETING OF THE PLANNING COMMISSION - 7 PM

All correspondences received prior to 5:00 p.m. on the Wednesday preceding a Planning Commission Meeting will be distributed to Commissioners to review prior to the meeting. Information submitted after 5 p.m. on that Wednesday may not have time to reach Commissioners, nor be read by them prior to consideration of an item.

All matters listed on the Regular Meeting of the Capitola Planning Commission Agenda shall be considered as Public Hearings.

1. ROLL CALL AND PLEDGE OF ALLEGIANCE

2. ORAL COMMUNICATIONS
   A. Additions and Deletions to Agenda
   B. Public Comments

   Short communications from the public concerning matters not on the Agenda. All speakers are requested to print their name on the sign-in sheet located at the podium so that their name may be accurately recorded in the Minutes.

   C. Commission Comments
   D. Staff Comments

3. PUBLIC HEARINGS

   Public Hearings are intended to provide an opportunity for public discussion of each item listed as a
Public Hearing. The following procedure is as follows: 1) Staff Presentation; 2) Public Discussion; 3) Planning Commission Comments; 4) Close public portion of the Hearing; 5) Planning Commission Discussion; and 6) Decision.

A. 208 Fanmar Way #19-0295 APN: 035-151-13
Design Permit for a second story addition with a variance for the required parking space dimensions and required driveway landscape area for a single-family residence located within the RM-LM (Multi-Family Residential Low-Medium Density) zoning district.
This project is in the Coastal Zone but does not require a Coastal Development Permit.
Environmental Determination: Categorical Exemption
Owner: Brooke Johnson
Representative: Richard Emigh, Filed: 06.19.19

B. 207 Oakland Avenue #19-0739 APN: 036-123-06
Design Permit, secondary dwelling unit, and fence height exception for the remodel of three residential structures, including an addition to one structure. The proposal includes a change in the number of dwelling units to comply with current zoning standards, with a reduction of one duplex and two single-family residences to one single-family residence, one secondary dwelling unit, and one detached living space. The project is located within the R-1 (Single-Family Residential) zoning district.
This project requires a Coastal Development Permit which is appealable to the California Coastal Commission after all possible appeals are exhausted through the City.
Environmental Determination: Categorical Exemption
Owner: Jason Nielsen
Representative: Derek Van Alstine, Filed: 12.16.2019

C. 203 Esplanade #20-0160 APN:035-211-04
Conditional Use Permit and Design Permit for a take-out window for Zelda’s Restaurant located within the CV (Central Village) zoning district.
This project is in the Coastal Zone but does not require a Coastal Development Permit.
Environmental Determination: Categorical Exemption
Property Owner: Jill Ealy
Representative: Jill Ealy Filed: 05.14.2020

D. 1400 Wharf Road #20-0141 APN: 034-072-01&02
Design Permit, Conditional Use Permit, and Initial Study/Mitigated Negative Declaration for the rehabilitation and repair of the historic Capitola Wharf located within the PF (Public Facilities) zoning district.
This project requires a Coastal Development Permit issued by the California Coastal Commission which is appealable.
Environmental Determination: Mitigated Negative Declaration
Property Owner: City of Capitola
Representative: Kailash Mozumder, Filed: 04.29.2020

4. DIRECTOR’S REPORT
5. COMMISSION COMMUNICATIONS
6. ADJOURNMENT
APPEALS: The following decisions of the Planning Commission can be appealed to the City Council within the (10) calendar days following the date of the Commission action: Conditional Use Permit, Variance, and Coastal Permit. The decision of the Planning Commission pertaining to an Architectural and Site Review Design Permit can be appealed to the City Council within the (10) working days following the date of the Commission action. If the tenth day falls on a weekend or holiday, the appeal period is extended to the next business day.

All appeals must be in writing, setting forth the nature of the action and the basis upon which the action is considered to be in error, and addressed to the City Council in care of the City Clerk. An appeal must be accompanied by a five hundred dollar ($500) filing fee, unless the item involves a Coastal Permit that is appealable to the Coastal Commission, in which case there is no fee. If you challenge a decision of the Planning Commission in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this agenda, or in written correspondence delivered to the City at, or prior to, the public hearing.

Notice regarding Planning Commission meetings: The Planning Commission meets regularly on the 1st Thursday of each month at 7 p.m. in the City Hall Council Chambers located at 420 Capitola Avenue, Capitola.

Agenda and Agenda Packet Materials: The Planning Commission Agenda and complete Agenda Packet are available on the Internet at the City's website: www.cityofcapitola.org. Need more information? Contact the Community Development Department at (831) 475-7300.

Agenda Materials Distributed after Distribution of the Agenda Packet: Materials that are a public record under Government Code § 54957.5(A) and that relate to an agenda item of a regular meeting of the Planning Commission that are distributed to a majority of all the members of the Planning Commission more than 72 hours prior to that meeting shall be available for public inspection at City Hall located at 420 Capitola Avenue, Capitola, during normal business hours.

Americans with Disabilities Act: Disability-related aids or services are available to enable persons with a disability to participate in this meeting consistent with the Federal Americans with Disabilities Act of 1990. Assisted listening devices are available for individuals with hearing impairments at the meeting in the City Council Chambers. Should you require special accommodations to participate in the meeting due to a disability, please contact the Community Development Department at least 24 hours in advance of the meeting at (831) 475-7300. In an effort to accommodate individuals with environmental sensitivities, attendees are requested to refrain from wearing perfumes and other scented products.

Televised Meetings: Planning Commission meetings are cablecast "Live" on Charter Communications Cable TV Channel 8 and are recorded to be replayed on the following Monday and Friday at 1:00 p.m. on Charter Channel 71 and Comcast Channel 25. Meetings can also be viewed from the City's website: www.cityofcapitola.org.
STAFF REPORT

TO: PLANNING COMMISSION
FROM: COMMUNITY DEVELOPMENT
DATE: JUNE 4, 2020
SUBJECT: 208 Fanmar Way #19-0295 APN: 035-151-13

Design Permit for a second story addition with a variance for the required parking space dimensions and required driveway landscape area for a single-family residence located within the RM-LM (Multi-Family Residential Low-Medium Density) zoning district. This project is in the Coastal Zone but does not require a Coastal Development Permit.

Environmental Determination: Categorical Exemption
Owner: Brooke Johnson
Representative: Richard Emigh, Filed: 06.19.19

APPLICANT PROPOSAL
The applicant is proposing 345 square feet of first- and second-story additions on a nonconforming single-family residence located at 208 Fanmar Way within the RM-LM (Multiple-Family Low-Medium Density) zoning district. The applicant is seeking a variance to the required parking space dimensions and the required driveway landscape area.

BACKGROUND
On April 22, 2020, the Architectural and Site Review Committee reviewed the application and provide the applicant with the following direction:

Public Works Representative, Kailash Mozumder: asked if the stormwater calculations reflected the latest proposal and inquired about the current and proposed drainage and infiltration methods. The applicant verified the stormwater calculations, stated the existing French drain will remain and the permeable surface area will increase, and informed Mr. Mozumder that the site does not have a history of puddling and the existing French drain functions effectively handle stormwater. Mr. Mozumder asked that details be provided for the new permeable pavers.

Building Department Representative, Robin Woodman: had no comments.

Local Architect, Frank Phantom: approved of the design overall and noted that the structure’s center-lot location and the proposed windows do not impose on neighbor privacy. Mr. Phantom noted that the second-floor walls do not appear to scale.

Assistant Planner, Sean Sesanto: requested that the applicant verify the bathroom window placement on the second floor and verify the wall heights shown on the elevations.
Following the Architecture and Site Review meeting, the applicant submitted a revised plan set with the correct second-story bathroom window placement and second-floor wall height.

**Development Standards**

The following table outlines the zoning code requirements for development in the RM-LM Zoning District. Development of single-family homes in the RM-LM Zoning District is governed by the process and standards contained in Chapter 17.15, “R-1 Single Family Residence District.” The applicant is seeking a variance to the required parking space dimensions and the required driveway landscape area.

DISCUSSION
The lot is located on Fanmar Way, which runs between Capitola Avenue and Monterey Avenue in the upper Capitola Village. The lot is surrounded by one- and two-story single-family homes. The existing residence is a nonconforming one-story single-family residence. The applicant is proposing to construct a second story with alterations to the first floor. The proposed remodel will have stucco siding on the first story and wood shingle siding on the second story. The remodel will have a gabled composition roof and a 56-square-foot second-story front deck overlooking Fanmar Way.

Nonconforming
The existing structure is located within the first-story side setback and the rear yard setback. The existing structure does not comply with the setback regulations of the zoning code and therefore is a legal non-conforming structure. Pursuant to code section 17.72.070, an existing non-complying structure that will be improved beyond 80% of the present fair market value of the structure may not be made unless the structure is brought into compliance with the current zoning regulations. The applicant has submitted a construction cost breakdown demonstrating that the new addition is 70% of the present fair market value of the structure.

Variance - Parking
The proposed 1,045-square-foot residence is required to have two parking spaces, neither of which must be covered. Each space must be at least nine feet wide by eighteen feet in length. The proposed uncovered parking includes one seven-foot-five-inch wide by seven feet deep space and one eight feet wide by eighteen feet deep space.

In the front setback area, the driveway is required to have two feet of landscaping adjacent to the side property line. The proposed parking area does not include the required two-foot landscaping strip in the front setback area along the side property line.

The applicant is seeking approval of a variance to allow an addition of more than 10% without meeting the minimum parking space dimensions and the required driveway landscaping area.

Pursuant to §17.66.090, the Planning Commission, on the basis of the evidence submitted at the hearing, may grant a variance permit when it finds:

A. That because of special circumstances applicable to subject property, including size, shape, topography, location or surroundings, the strict application of this title is found to deprive subject property of privileges enjoyed by other properties in the vicinity and under identical zone classification;

B. That the grant of a variance permit would not constitute a grant of special privilege inconsistent with the limitations upon other properties in the vicinity and zone in which subject property is situated.

In relation to variance finding A, the subject property is relatively small by Capitola standards (1,804 square feet) with a narrow street frontage of 25 feet. The average front property width on the north side of Fanmar Way is approximately 33 feet. The existing driveway’s substandard.

<table>
<thead>
<tr>

<td>2 uncovered</td>
</tr>
<tr>
<td>*Required uncovered spaces must be 9 ft. wide by 18 ft. deep.</td>
<td>Required</td>
</tr>
</tbody>
</table>
dimensions and lack of a landscaping strip are typical of the neighborhood. Due to the property size and the width along the street frontage, the strict application of parking standards would deprive the subject property of privileges enjoyed by other properties in the vicinity and under identical zone classification.

To analyze whether or not the approval of a variance would be a grant of special privilege inconsistent with the limitation upon other properties in the vicinity and zone in which the property is situated (variance finding B), staff reviewed characteristics and lot dimensions of properties on the north side of the Fanmar Way block, consisting of sixteen properties. The property is the smallest lot among those observed with one of the narrowest street widths. Only six of the observed sixteen appear to comply with the required minimum parking space dimensions and provide the required two feet of landscaping in the driveway in the front setback area. The grant of a variance would not constitute a grant of special privilege because less than half of the neighborhood meets the parking dimensions and landscaping area.

**CEQA**
Section 15301(e) of the CEQA Guidelines exempts additions to existing structures provided that the addition will not result in an increase of more than 50 percent of the floor area of the structure before the addition. The proposed additions total 346 square feet, which is 49.3 percent. No adverse environmental impacts were discovered during review of the proposed project.

**RECOMMENDATION**
Staff recommends the Planning Commission approve project application #19-0295 based on the following Conditions and Findings for Approval.

**CONDITIONS OF APPROVAL**

1. The project approval consists of construction of a 345-square-foot second-story addition with a variance to allow an addition of more than 10% without meeting minimum parking space dimensions and to not provide the required driveway landscaping area. The maximum Floor Area Ratio for the 1,804-square-foot property is 58% (1,046 square feet). The total FAR of the project is 57.9% with a total of 1,045 square feet, compliant with the maximum FAR within the zone. The proposed project is approved as indicated on the final plans reviewed and approved by the Planning Commission on June 4, 2020, except as modified through conditions imposed by the Planning Commission during the hearing.

2. Prior to construction, a building permit shall be secured for any new construction or modifications to structures authorized by this permit. Final building plans shall be consistent with the plans approved by the Planning Commission. All construction and site improvements shall be completed according to the approved plans.

3. At time of submittal for building permit review, the Conditions of Approval must be printed in full on the cover sheet of the construction plans.

4. At time of submittal for building permit review, Public Works Standard Detail SMP STRM shall be printed in full and incorporated as a sheet into the construction plans. All construction shall be done in accordance with the Public Works Standard Detail BMP STRM.

5. Prior to making any changes to approved plans, modifications must be specifically requested and submitted in writing to the Community Development Department. Any
significant changes to the size or exterior appearance of the structure shall require Planning Commission approval.

6. Prior to issuance of building permit, a landscape plan shall be submitted and approved by the Community Development Department. The landscape plan can be produced by the property owner, landscape professional, or landscape architect. Landscape plans shall reflect the Planning Commission approval and shall identify type, size, and location of species and details of any proposed (but not required) irrigation systems.

7. Prior to issuance of building permit, all Planning fees associated with permit #19-0295 shall be paid in full.

8. Prior to issuance of building permit, the developer shall pay Affordable housing in-lieu fees as required to assure compliance with the City of Capitola Affordable (Inclusionary) Housing Ordinance.

9. Prior to issuance of a building permit, the applicant must provide documentation of plan approval by the following entities: Santa Cruz County Sanitation Department, Soquel Creek Water District, and Central Fire Protection District.

10. Prior to issuance of building permits, a drainage plan, grading, sediment and erosion control plan, shall be submitted to the City and approved by Public Works. The plans shall be in compliance with the requirements specified in Capitola Municipal Code Chapter 13.16 Storm Water Pollution Prevention and Protection.

11. Prior to issuance of building permits, the applicant shall submit a stormwater management plan to the satisfaction of the Director of Public Works which implements all applicable Post Construction Requirements (PCRs) and Public Works Standard Details, including all standards relating to low impact development (LID).

12. Prior to any land disturbance, a pre-site inspection must be conducted by the grading official to verify compliance with the approved erosion and sediment control plan.

13. Prior to any work in the City road right of way, an encroachment permit shall be acquired by the contractor performing the work. No material or equipment storage may be placed in the road right-of-way.

14. During construction, any construction activity shall be subject to a construction noise curfew, except when otherwise specified in the building permit issued by the City. Construction noise shall be prohibited between the hours of nine p.m. and seven-thirty a.m. on weekdays. Construction noise shall be prohibited on weekends with the exception of Saturday work between nine a.m. and four p.m. or emergency work approved by the building official. §9.12.010B

15. Prior to a project final, all cracked or broken driveway approaches, curb, gutter, or sidewalk shall be replaced per the Public Works Standard Details and to the satisfaction of the Public Works Department. All replaced driveway approaches, curb, gutter or sidewalk shall meet current Accessibility Standards.

16. Prior to issuance of a Certificate of Occupancy, compliance with all conditions of approval shall be demonstrated to the satisfaction of the Community Development Director. Upon evidence of non-compliance with conditions of approval or applicable
municipal code provisions, the applicant shall remedy the non-compliance to the satisfaction of the Community Development Director or shall file an application for a permit amendment for Planning Commission consideration. Failure to remedy a non-compliance in a timely manner may result in permit revocation.

17. This permit shall expire 24 months from the date of issuance. The applicant shall have an approved building permit and construction underway before this date to prevent permit expiration. Applications for extension may be submitted by the applicant prior to expiration pursuant to Municipal Code section 17.81.160.

18. The planning and infrastructure review and approval are transferable with the title to the underlying property so that an approved project may be conveyed or assigned by the applicant to others without losing the approval. The permit cannot be transferred off the site on which the approval was granted.

19. Upon receipt of certificate of occupancy, garbage and recycling containers shall be placed out of public view on non-collection days.

20. Prior to issuance of building permits, the building plans must show that the existing overhead utility lines will be underground to the nearest utility pole.

**DESIGN PERMIT FINDINGS**

A. The project, subject to the conditions imposed, secures the purposes of the Zoning Ordinance, General Plan, and Local Coastal Plan. Community Development Staff, the Architectural and Site Review Committee, and the Planning Commission have all reviewed the project. With a variance to allow an addition of more than 10% without meeting minimum parking space dimensions and to not provide the required driveway landscaping area, the proposed remodel of an existing single-family residence complies with the development standards of the Multi-Family Residential Low-Medium Density District.

B. The project will maintain the character and integrity of the neighborhood. Community Development Staff, the Architectural and Site Review Committee, and the Planning Commission have all reviewed the application for the remodel of an existing single-family residence. The design of the home with stucco and wood shingle siding, a gabled composition roof, and second-story front deck will fit in nicely with the existing neighborhood. The project will maintain the character and integrity of the neighborhood.

**VARIANCE FINDINGS**

A. Special circumstances applicable to the subject property, including size, shape, topography, location or surroundings, exist on the site and the strict application of this title is found to deprive subject property of privileges enjoyed by other properties in the vicinity and under identical zone classification;

The special circumstance applicable to the subject property is that the existing property is only 1,804 square feet in size and has a street frontage of 25 feet, below the City average width of 40 feet and the neighborhood average of 33 feet. The existing driveway’s substandard dimensions and lack of a landscaping strip are typical of the neighborhood. Due to the property size and width along the street frontage, the strict application of the parking standards would deprive the subject property of privileges enjoyed by other properties in the vicinity and under identical zone classification.
B. The grant of a variance would not constitute a grant of a special privilege inconsistent with the limitation upon other properties in the vicinity and zone in which subject property is situated.
The subject property is the smallest lot on the north side of the Fanmar Way block, consisting of sixteen properties. Among those properties, the subject property also has one of the narrowest street widths. Only six of the observed sixteen properties appear to comply with the minimum parking space dimensions and provide the required two feet of landscaping in the driveway in the front setback area. The grant of this variance would not constitute a special privilege because many Fanmar Way properties do not meet these parking standards.

CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) FINDINGS
A. This project is categorically exempt under Section 15301(e) of the California Environmental Quality Act and is subject to Section 753.5 of Title 14 of the California Code of Regulations.
Section 15301(e) of the CEQA Guidelines exempts additions to existing structures provided that the addition will not result in an increase of more than 50 percent of the floor area before the addition, or 2,500 square feet, whichever is less. This project involves a 345-square-foot addition, or 49.3 percent of the existing structure, within the RM-LM (Multi-Family Residential Low-Medium) zoning district. No adverse environmental impacts were discovered during review of the proposed project.

May 26, 2020

Mr. Sean Sesanto
Assistant Planner
City of Capitola
Capitola, CA 95010

My name is Gordon van Zuiden. My wife, Michele and I live at 206 Fanmar Way in Capitola and I met you last Friday afternoon, May 22nd, when you were placing the Notice of Public Hearing sign on 208 Fanmar Way, our neighbor for design permit #19-0295.

My wife and I went to visit the design architect, Richard Emigh, that afternoon to pick up a set of the proposed design plans. The purpose of this email is to notify you and the planning commission of our very significant concerns over the height, size, and scope of this proposed second floor addition. We will also submit these concerns in writing during the June 7th planning meeting at 7PM that evening.

Here are our primary concerns:

1. This large second story edition on the smallest, most narrow lot in this section of Fanmar Way not only disrupts the character and feel of the street's profile, but the fact that the proposed second story addition is 10' in height, 20% higher than the bottom floor gives the structure a distinctly top heavy feel. Compounding this top heavy appearance is the fact that the A framed roof slope is much steeper than the roof slope shown for the bottom floor street projection.

2. We also have concerns that the daylight plane of winter sunlight that we enjoy will be significantly obscured by the height of this second floor addition. Was this calculated when this addition was designed?

3. We have a roof deck garden that overlooks the ocean. This tall second story addition will obscure almost all of that view, significantly effecting the value of our property which we have enjoyed for almost 30 years.

4. The proposed 25' height is not in keeping with the street profile of the local neighboring homes. Most of these homes are historic homes (our Sears built home is listed on page 177 in the Historic Context Statement for the City of Capitola, completed in 2004 by Carolyn Swift) and all are well over 50 years old. Several of our immediate neighbors homes are bungalow style Sears built homes and they represent the charm and character of the old Capitola Village. In fact, almost all of these homes have been significantly remodeled in the last several years and kept their single story character. Our immediate neighbor on the southern border of our home at 204 Fanmar recently rebuilt his home and kept it as an attractive, single story home. Across the street at 203 and 209 Fanmar remodels that preserved their historic charm were recently completed while maintaining their single story appearance.
5. We are confident that we are not the only neighbors with these serious concerns. Are you planning on placing story poles up this week so that other neighbors can visually see the extent and scope of this proposed second story addition?

*Second story design modification proposal:*

Even with all the aforementioned significant concerns, Michele and I are friends with our neighbor Brooke and we would like to maintain that friendship. We understand and respect her need for a second floor kitchen but ask that the height be reduced by 5' by reducing the second story addition height to a standard 8' ceiling and the roof pitch to have a gentler 4.25:12 pitch to match the first floor roof pitch. This height reduction would help to retain our ocean view, preserve more of our winter sunlight, and keep the home's appearance more in line with the street's character.

We would also ask that the second story addition start 4' farther back from the street and align with the back of the home to preserve more of the bungalow feel of the home from the street view and allow more winter afternoon sunlight into our west facing living room and bedroom windows. All of these requests do not impact at all the overall square footage addition that Brooke is requesting for her second floor kitchen.

*Sean, since time is of the essence, my wife and I would like to receive your response to these concerns and our suggested design compromise by Thursday, Mat 28th.* Based on your response we can determine if we will hire a land use attorney to represent our interests at the June 7th planning meeting.

Thank you for your time and prompt attention to this matter.

Sincerely,

Gordon and Michele van Zuiden
206 Fanmar Way
Capitola, CA
May 28, 2020

Mr. Sean Sesanto
Assistant Planner
City of Capitola
Capitola, CA 95010

Sean,

Thank you very much for your timely responses to our concerns over the second story addition at 208 Fanmar Way, Capitola.

Another concern that we have for the record is the request from the applicant for a parking dimension variance. The Capitola residential building code states that a minimum of 9' of width is required for uncovered parking. The current width of the applicant’s driveway is only 7' 5” to 8' 1” wide, almost 20% less than code. Our own sedan cars measure almost 7’ wide which would yield less than .5 feet of space on either side of a parked car in the applicant’s current driveway.

As a result of this narrow driveway our adjacent flagstone driveway has been repeatedly damaged by vehicles trying to squeeze onto the applicants driveway and crushing our flagstone pavers and/or defacing them (photos will be sent to you on or before Monday).

We ask that if the applicant receives approval to significantly remodel her current home and replace it with a new 2 story home that this new home foundation perimeter adhere to the 9' parking width dimension code set forth by Capitola. If not, we will continue to have damage done to our existing driveway with very little recourse.

Thank you for your time and consideration of this matter.

Sincerely,

Gordon and Michele van Zuiden
206 Fanmar Way
Capitola, CA
STAFF REPORT

TO:         PLANNING COMMISSION
FROM:      COMMUNITY DEVELOPMENT
DATE:  JUNE 4, 2020
SUBJECT:  207 Oakland Avenue  #19-0739  APN: 036-123-06

Design Permit, secondary dwelling unit, and fence height exception for the remodel of three residential structures, including an addition to one structure. The proposal includes a change in the number of dwelling units to comply with current zoning standards, with a reduction of one duplex and two single-family residences to one single-family residence, one secondary dwelling unit, and one detached living space. The project is located within the R-1 (Single-Family Residential) zoning district.
This project requires a Coastal Development Permit which is appealable to the California Coastal Commission after all possible appeals are exhausted through the City.
Environmental Determination: Categorical Exemption
Owner: Jason Nielsen
Representative: Derek Van Alstine, Filed: 12.16.2019

APPLICANT PROPOSAL
The applicant is proposing to modify the existing property with four residential units to a single-family home with one secondary dwelling unit. Specifically, the application would convert a duplex into a single-family residence, convert a 514-square-foot single-family residence into a secondary dwelling unit, and convert a 601-square-foot single-family residence into a detached living space. The proposal includes first- and second-story additions to the single-family residence, for a net increase of 131 square feet, and the construction of two new accessory structures: a shed and a covered gateway. The applicant is also requesting an exception to the fence height limit. With approval of a fence height exception, the application complies with all development standards of the R-1 zone.

BACKGROUND
On September 27, 1979, the property’s land use activity first became nonconforming (multi-family residential, with four residential units on the property) when the zoning changed to R-1 (Single-Family Residential).

On February 9, 1988, City Council reviewed and denied an amortization extension request.

On March 11, 2020, the Architectural and Site Review Committee reviewed application #19-0739 and provided the applicant with the following direction:
Public Works Representative, Kailash Mozumder: inquired about the current and proposed drainage, noting the flat lot and semi-permeable pavers. The applicant stated that the lot currently drains to the street, there is no on-site puddling, and the proposed drainage will probably utilize drainage swales.

Building Department Representative, Robin Woodman: noted that the walls and openings along property lines may require higher ratings for fire safety.

Local Architect, Frank Phantom: approved of the design and the separation of parking from the home and provided color wheel samples.

Assistant Planner, Sean Sesanto: stated that, prior to Planning Commission, the proposed fence may only be six feet tall, or eight feet tall provided the top two feet of fence be made of lattice or other open material.

Following the Architecture and Site Review meeting, the applicant requested a fence height exception to allow a solid eight-foot wall.

Development Standards
Tables outlining the zoning code requirements for development in the R-1 Zoning District and how they apply to each of the three structures are attached. The three structures are nonconforming, and the nonconformities are described in the “Nonconforming Structures” section below. The modifications to the three structures proposed under application #19-0739 comply with the development standards for the R-1 (Single-Family Residential) zoning district. The cumulative floor area ratio (FAR) for the project is included in the development standards table below.

DISCUSSION
The existing residential units at 207 Oakland Avenue consist of a two-story duplex and two single-story, single-family residences. The applicant is proposing to convert the duplex into a single-family residence, convert one existing single-family residence into a secondary dwelling unit, and convert the other existing single-family residence into a detached living space for a combined floor area ratio (FAR) of 2,198 square feet. The lot is surrounded by one- and two-story single-family homes within the Depot Hill neighborhood.

The modifications to the new single-family dwelling unit include replacing a rear second-story deck with a new bathroom. The detached living space will have a single bathroom but will not be permitted to have a kitchen. The proposed exterior changes to all structures will be of matching
Spanish-style, featuring clay tile roofs, stucco siding, and a mix of rectangular and arched windows. A stucco wall is proposed to surround the rear portion of the property and includes a 52-square-foot covered gateway accessory structure. A second accessory structure, an 80-square-foot shed, is exempt from the FAR calculation pursuant to Capitola Municipal Code (CMC) §17.15.030(C)(2).

**Fence Exception**
Fences behind both the front setback line and any residential building may be built to a maximum of height of eight feet, provided that the top two feet of the fence be made of lattice of other open material. The applicant is requesting a fence height of eight feet that maintains the solid stucco material above six feet. Pursuant to CMC §17.54.020(B), the Planning Commission may approve alternative locations, height, and material for fences. The fence complies with all other standards. The applicant is requesting the exception to compliment the Spanish-style architecture with a traditional solid stucco wall.

**Parking**
Residential lots with a floor area between 2,001 square feet up to 2,600 square feet are required to provide three spaces, one of which must be covered. The lot currently has four uncovered spaces and therefore is considered nonconforming. Pursuant to CMC §17.51.135(B), no additional parking shall be required for reconstruction or structural alteration of an existing residential structure, so long as the floor area of the structure is not increased by more than ten percent of the existing gross floor area. The existing gross floor area of the three structures will not increase by more than ten percent, so the applicant is not required to provide one covered parking space.

**Nonconforming Activities**
Currently the lot activities are nonconforming due to the existence of four dwelling units (multi-family use), which constitute a nonconforming activity that must be discontinued by the amortization period of September 27, 2029, which is fifty years from the date the use first became nonconforming, unless an amortization period extension is granted by the Capitola City Council. The applicant proposes converting the uses to one single-family dwelling unit, one secondary dwelling unit, and one detached living space, which would bring the use on the site into compliance with the current zoning.

**Nonconforming Structures**
Each of the three residential structures are also nonconforming due to their locations in the required setback. Pursuant to CMC §17.72.070, an existing non-complying structure that will be improved beyond 80% of present fair market value of the structure may not be made unless the structure is brought into compliance with the current zoning regulations. The applicant has submitted construction cost breakdowns (Attachment 6) for each of the three structures demonstrating that each structure is not improved beyond 80% of the present fair market value. A list of the nonconformities and improvement values, provided below:

**Existing Duplex/Proposed Primary Single-Family Residence – Building A**
The duplex is nonconforming because the east and north elevations encroach into the required front and side setbacks. The construction cost breakdown demonstrates the improvements are 65.4 percent of the present market value.

**Existing Single-Family Residence/Proposed Detached Living Space – Building B**
The unit is nonconforming because the west and north elevations encroach into the required rear and side setbacks. The construction cost breakdown demonstrates the improvements are 49.9 percent of the present market value.
Existing Single-Family Residence/Proposed Secondary Dwelling Unit – Building C

The unit is nonconforming because the south elevation encroaches into the required side setback. The construction cost breakdown demonstrates the improvements are 49.9 percent of the present market value.

Secondary Dwelling Unit

The proposal includes the conversion of an existing nonconforming single-story, single-family residence into a detached 500-square-foot secondary dwelling unit. The proposed secondary dwelling unit is permitted in the R-1 zoning district on a lot 5,000 square feet or larger in conjunction with a primary single-family dwelling. Changes to the structure’s exterior include the addition of a covered porch and Spanish style exterior matching the single-family residence and the detached living space. The proposed secondary dwelling unit complies with all applicable regulations under CMC Chapter 17.99.

CEQA

Section 15303 of the CEQA Guidelines exempts new construction or conversion of small structures. This project involves the conversion of a duplex to a single-family residence, conversion of a single-family residence to a secondary dwelling unit, the conversion of a single-family dwelling into a detached living space, and the construction of two accessory structures within the R-1 (single-family residence) Zoning District. No adverse environmental impacts were discovered during review of the proposed project.

RECOMMENDATION

Staff recommends the Planning Commission approve project application #19-0739 based on the following Conditions and Findings for Approval.

CONDITIONS OF APPROVAL

1. The project approval consists of a remodel of three residential structures, including an addition to one structure that will increase the total floor area by 131 square-feet, and a fence height exception allowing a solid 8-foot-high wall even with the front façade of the single-family residence. The proposal includes a change in the number of dwelling units, with a reduction of one duplex and two single-family residences to one single-family residence, one secondary dwelling unit, and one detached living space. The maximum Floor Area Ratio for the 5,500 square foot property is 60% (3,300 sq. ft.). The total FAR of the project is 40% with a total of 2,198 square feet, compliant with the maximum FAR within the zone. The proposed project is approved as indicated on the final plans reviewed and approved by the Planning Commission on June 4, 2020, except as modified through conditions imposed by the Planning Commission during the hearing.

2. Prior to construction, a building permit shall be secured for any new construction or modifications to structures authorized by this permit. Final building plans shall be consistent with the plans approved by the Planning Commission. All construction and site improvements shall be completed according to the approved plans.

3. At time of submittal for building permit review, the Conditions of Approval must be printed in full on the cover sheet of the construction plans.

4. At time of submittal for building permit review, Public Works Standard Detail SMP STRM shall be printed in full and incorporated as a sheet into the construction plans. All construction shall be done in accordance with the Public Works Standard Detail BMP STRM.
5. Prior to making any changes to approved plans, modifications must be specifically requested and submitted in writing to the Community Development Department. Any significant changes to the size or exterior appearance of the structure shall require Planning Commission approval.

6. Prior to issuance of building permit, a landscape plan shall be submitted and approved by the Community Development Department. The landscape plan can be produced by the property owner, landscape professional, or landscape architect. Landscape plans shall reflect the Planning Commission approval and shall identify type, size, and location of species and details of any proposed (but not required) irrigation systems.

7. Prior to issuance of building permit, all Planning fees associated with permit #19-0739 shall be paid in full.

8. Prior to issuance of building permit, the developer shall pay Affordable housing in-lieu fees as required to assure compliance with the City of Capitola Affordable (Inclusionary) Housing Ordinance.

9. Prior to issuance of a building permit, the applicant must provide documentation of plan approval by the following entities: Santa Cruz County Sanitation Department, Soquel Creek Water District, and Central Fire Protection District.

10. Prior to issuance of building permits, a drainage plan, grading, sediment and erosion control plan, shall be submitted to the City and approved by Public Works. The plans shall be in compliance with the requirements specified in Capitola Municipal Code Chapter 13.16 Storm Water Pollution Prevention and Protection.

11. Prior to issuance of building permits, the applicant shall submit a stormwater management plan to the satisfaction of the Director of Public Works which implements all applicable Post Construction Requirements (PCRs) and Public Works Standard Details, including all standards relating to low impact development (LID).

12. Prior to any land disturbance, a pre-site inspection must be conducted by the grading official to verify compliance with the approved erosion and sediment control plan.

13. Prior to any work in the City road right of way, an encroachment permit shall be acquired by the contractor performing the work. No material or equipment storage may be placed in the road right-of-way.

14. During construction, any construction activity shall be subject to a construction noise curfew, except when otherwise specified in the building permit issued by the City. Construction noise shall be prohibited between the hours of nine p.m. and seven-thirty a.m. on weekdays. Construction noise shall be prohibited on weekends with the exception of Saturday work between nine a.m. and four p.m. or emergency work approved by the building official. §9.12.010B

15. Prior to a project final, all cracked or broken driveway approaches, curb, gutter, or sidewalk shall be replaced per the Public Works Standard Details and to the satisfaction of the Public Works Department. All replaced driveway approaches, curb, gutter or sidewalk shall meet current Accessibility Standards.
16. Prior to issuance of a Certificate of Occupancy, compliance with all conditions of
approval shall be demonstrated to the satisfaction of the Community Development
Director. Upon evidence of non-compliance with conditions of approval or applicable
municipal code provisions, the applicant shall remedy the non-compliance to the
satisfaction of the Community Development Director or shall file an application for a
permit amendment for Planning Commission consideration. Failure to remedy a non-
compliance in a timely manner may result in permit revocation.

17. This permit shall expire 24 months from the date of issuance. The applicant shall have
an approved building permit and construction underway before this date to prevent
permit expiration. Applications for extension may be submitted by the applicant prior to
expiration pursuant to Municipal Code section 17.81.160 (Coastal).

18. The planning and infrastructure review and approval are transferable with the title to the
underlying property so that an approved project may be conveyed or assigned by the
applicant to others without losing the approval. The permit cannot be transferred off the
site on which the approval was granted.

19. Upon receipt of certificate of occupancy, garbage and recycling containers shall be
placed out of public view on non-collection days.

20. The floor area for the secondary dwelling unit shall not exceed 500 square feet.

21. At time of submittal for building permit review, a water will serve letter for the second
dwelling unit must be submitted to the City.

22. Before obtaining a building permit for a secondary dwelling unit, the property owner shall
file with the county recorder a declaration of restrictions containing a reference to the
deed under which the property was acquired by the present owner and stating that:
   a. The secondary dwelling unit shall not be sold separately;
   b. The unit is restricted to the approved size;
   c. The administrative review or the design permit, whichever applies, for the secondary
dwelling unit shall be in effect only so long as the owner of record occupies either the
   main residence or the secondary dwelling unit;
   d. The above declarations are binding upon any successor in ownership of the
   property. Lack of compliance shall be cause for code enforcement and/or revoking
   the administrative review or the architecture and site review permit, whichever
   applies;
   e. The deed restrictions shall lapse upon removal of the secondary dwelling unit.

**DESIGN PERMIT FINDINGS**

A. The project, subject to the conditions imposed, secures the purposes of the
   Zoning Ordinance, General Plan, and Local Coastal Plan.
   Community Development Staff, the Architectural and Site Review Committee, and the
   Planning Commission have all reviewed the project. The proposed remodel of three
   structures and reduction of dwelling units comply with the development standards of the
   Single-Family Residential District. Specifically, all of the requirements of Capitola
   Municipal Code §17.99.050 have been met. The project secures the purposes of the
   Zoning Ordinance, General Plan, and Local Coastal Plan.

B. The project will maintain the character and integrity of the neighborhood.
Community Development Staff, the Architectural and Site Review Committee, and the Planning Commission have all reviewed the application. The design of the three Spanish-style residential structures with matching clay tile roofs, stucco siding, and mix of rectangular and arched windows, will fit in nicely with the existing neighborhood. The project will maintain the character and integrity of the neighborhood.

CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) FINDINGS
A. This project is categorically exempt under Section 15303 of the California Environmental Quality Act and is subject to Section 753.5 of Title 14 of the California Code of Regulations.

Section 15303, specifically subsections (a) and (e) of the CEQA Guidelines exempts new construction or conversion of small structures from one use to another where only minor modifications are made in the exterior of the structure. This project involves the remodel of three structures with an addition to one structure and the reduction of total dwelling units from one duplex and two single-family residences to one single-family residence, one secondary dwelling unit, and one detached living space within the R-1 (Single-Family Residential) zoning district. No adverse environmental impacts were discovered during review of the proposed project.

COASTAL FINDINGS
D. Findings Required.
1. A coastal permit shall be granted only upon adoption of specific written factual findings supporting the conclusion that the proposed development conforms to the certified Local Coastal Program, including, but not limited to:
   a. A statement of the individual and cumulative burdens imposed on public access and recreation opportunities based on applicable factors identified pursuant to subsection (D)(2) of this section. The type of affected public access and recreation opportunities shall be clearly described;
   b. An analysis based on applicable factors identified in subsection (D)(2) of this section of the necessity for requiring public access conditions to find the project consistent with the public access provisions of the Coastal Act;
   c. A description of the legitimate governmental interest furthered by any access conditioned required;
   d. An explanation of how imposition of an access dedication requirement alleviates the access burdens identified.

   • The proposed development conforms to the City’s certified Local Coastal Plan (LCP). The specific, factual findings, as per CMC Section 17.46.090(D) are as follows:

2. Require Project-Specific Findings. In determining any requirement for public access, including the type of access and character of use, the city shall evaluate and document in written findings the factors identified in subsections (D)(2)(a) through (e), to the extent applicable. The findings shall explain the basis for the conclusions and decisions of the city and shall be supported by substantial evidence in the record. If an access dedication is required as a condition of approval, the findings shall explain how the adverse effects which have been identified will be alleviated or mitigated by the dedication. As used in this section, “cumulative effect” means the effect of the individual project in combination with the effects of past projects, other current projects, and probable future projects, including development allowed under applicable planning and zoning.
a. Project Effects on Demand for Access and Recreation. Identification of existing and
open public access and coastal recreation areas and facilities in the regional and
local vicinity of the development. Analysis of the project’s effects upon existing public
access and recreation opportunities. Analysis of the project’s cumulative effects upon
the use and capacity of the identified access and recreation opportunities, including
public tidelands and beach resources, and upon the capacity of major coastal roads
from subdivision, intensification or cumulative buildout. Projection for the anticipated
demand and need for increased coastal access and recreation opportunities for the
public. Analysis of the contribution of the project’s cumulative effects to any such
projected increase. Description of the physical characteristics of the site and its
proximity to the sea, tideland viewing points, upland recreation areas, and trail
linkages to tidelands or recreation areas. Analysis of the importance and potential of
the site, because of its location or other characteristics, for creating, preserving or
enhancing public access to tidelands or public recreation opportunities;

- The proposed project is located at 207 Oakland Avenue. The home is not located
  in an area with coastal access. The home will not have an effect on public trails
  or beach access.

b. Shoreline Processes. Description of the existing shoreline conditions, including
beach profile, accessibility and usability of the beach, history of erosion or accretion,
character and sources of sand, wave and sand movement, presence of shoreline
protective structures, location of the line of mean high tide during the season when
the beach is at its narrowest (generally during the late winter) and the proximity of
that line to existing structures, and any other factors which substantially characterize
or affect the shoreline processes at the site. Identification of anticipated changes to
shoreline processes at the site. Identification of anticipated changes to shoreline
processes and beach profile unrelated to the proposed development. Description
and analysis of any reasonably likely changes, attributable to the primary and
cumulative effects of the project, to: wave and sand movement affecting beaches in
the vicinity of the project; the profile of the beach; the character, extent, accessibility
and usability of the beach; and any other factors which characterize or affect
beaches in the vicinity. Analysis of the effect of any identified changes of the project,
alone or in combination with other anticipated changes, will have upon the ability of
the public to use public tidelands and shoreline recreation areas;

- The proposed project is located along 207 Oakland Avenue. No portion of the
  project is located along the shoreline or beach.

c. Historic Public Use. Evidence of use of the site by members of the general public for
a continuous five-year period (such use may be seasonal). Evidence of the type and
character of use made by the public (vertical, lateral, blufftop, etc., and for passive
and/or active recreational use, etc.). Identification of any agency (or person) who has
maintained and/or improved the area subject to historic public use and the nature of
the maintenance performed and improvements made. Identification of the record
owner of the area historically used by the public and any attempts by the owner to
prohibit public use of the area, including the success or failure of those attempts.
Description of the potential for adverse impact on public use of the area from the
proposed development (including but not limited to, creation of physical or
psychological impediments to public use);
• There is not a history of public use on the subject lot.

d. Physical Obstructions. Description of any physical aspects of the development which block or impede the ability of the public to get to or along the tidelands, public recreation areas, or other public coastal resources or to see the shoreline;

• The proposed project is located on private property on 207 Oakland Avenue. The project will not block or impede the ability of the public to get to or along the tidelands, public recreation areas, or views to the shoreline.

e. Other Adverse Impacts on Access and Recreation. Description of the development’s physical proximity and relationship to the shoreline and any public recreation area. Analysis of the extent of which buildings, walls, signs, streets or other aspects of the development, individually or cumulatively, are likely to diminish the public’s use of tidelands or lands committed to public recreation. Description of any alteration of the aesthetic, visual or recreational value of public use areas, and of any diminution of the quality or amount of recreational use of public lands which may be attributable to the individual or cumulative effects of the development.

• The proposed project is located on private property that will not impact access and recreation. The project does not diminish the public’s use of tidelands or lands committed to public recreation nor alter the aesthetic, visual, or recreational value of public use areas.

3. Required Findings for Public Access Exceptions. Any determination that one of the exceptions of subsection (F)(2) applies to a development shall be supported by written findings of fact, analysis and conclusions which address all of the following:

a. The type of access potentially applicable to the site involved (vertical, lateral, bluff top, etc.) and its location in relation to the fragile coastal resource to be protected, the agricultural use, the public safety concern, or the military facility which is the basis for the exception, as applicable;

b. Unavailability of any mitigating measures to manage the type, character, intensity, hours, season or location of such use so that agricultural resources, fragile coastal resources, public safety, or military security, as applicable, are protected;

c. Ability of the public, through another reasonable means, to reach the same area of public tidelands as would be made accessible by an accessway on the subject land.

• The project is not requesting a Public Access Exception, therefore these findings do not apply.

4. Findings for Management Plan Conditions. Written findings in support of a condition requiring a management plan for regulating the time and manner or character of public access use must address the following factors, as applicable:

a. Identification and protection of specific habitat values including the reasons supporting the conclusions that such values must be protected by limiting the hours, seasons, or character of public use;

• The project is located in a residential area without sensitive habitat areas.

b. Topographic constraints of the development site;
- The project is located on a flat lot.

c. Recreational needs of the public;
   - The project does not impact the recreational needs of the public.

d. Rights of privacy of the landowner which could not be mitigated by setting the project back from the access way or otherwise conditioning the development;

e. The requirements of the possible accepting agency, if an offer of dedication is the mechanism for securing public access;

f. Feasibility of adequate setbacks, fencing, landscaping, and other methods as part of a management plan to regulate public use.

5. **Project complies with public access requirements, including submittal of appropriate legal documents to ensure the right of public access whenever, and as, required by the certified land use plan and Section 17.46.010 (coastal access requirements);**
   - No legal documents to ensure public access rights are required for the proposed project.

6. **Project complies with visitor-serving and recreational use policies;**

   **SEC. 30222**
   The use of private lands suitable for visitor-serving commercial recreational facilities designed to enhance public opportunities for coastal recreation shall have priority over private residential, general industrial, or general commercial development, but not over agriculture or coastal-dependent industry.

   - The project involves a single-family residence, a secondary unit, and a detached living space on a residential lot of record.

   **SEC. 30223**
   Upland areas necessary to support coastal recreational uses shall be reserved for such uses, where feasible.

   - The project involves a single-family residence, a secondary unit, and a detached living space on a residential lot of record.

   c) Visitor-serving facilities that cannot be feasibly located in existing developed areas shall be located in existing isolated developments or at selected points of attraction for visitors.

   - The project involves a single-family residence, a secondary unit, and a detached living space on a residential lot of record.

7. **Project complies with applicable standards and requirements for provision of public and private parking, pedestrian access, alternate means of transportation and/or traffic improvements;**
The project involves the remodel of three residential structures. The project complies with applicable standards and requirements for provision for parking, pedestrian access, alternate means of transportation, and/or traffic improvements.

8. **Review of project design, site plan, signing, lighting, landscaping, etc., by the city’s architectural and site review committee, and compliance with adopted design guidelines and standards, and review committee recommendations;**
   - The project complies with the design guidelines and standards established by the Municipal Code.

9. **Project complies with LCP policies regarding protection of public landmarks, protection or provision of public views; and shall not block or detract from public views to and along Capitola’s shoreline;**
   - The project will not negatively impact public landmarks and/or public views. The project will not block or detract from public views to and along Capitola’s shoreline.

10. **Demonstrated availability and adequacy of water and sewer services;**
    - The project is located on a legal lot of record with available water and sewer services.

11. **Provisions of minimum water flow rates and fire response times;**
    - The project is located 0.5 miles from the Central Fire Protection District Capitola Station. Water is available at the location.

12. **Project complies with water and energy conservation standards;**
    - The project is for a single-family residence, a secondary unit, and a detached living space. The GHG emissions for the project are projected at less than significant impact. All water fixtures must comply with the low-flow standards of the Soquel Creek Water District.

13. **Provision of park dedication, school impact, and other fees as may be required;**
    - The project will be required to pay appropriate fees prior to building permit issuance.

14. **Project complies with coastal housing policies, and applicable ordinances including condominium conversion and mobile home ordinances;**
    - The project does not involve a condo conversion or mobile homes.

15. **Project complies with natural resource, habitat, and archaeological protection policies;**
    - Conditions of approval have been included to ensure compliance with established policies.

16. **Project complies with Monarch butterfly habitat protection policies;**
• The project is outside of any identified sensitive habitats, specifically areas where Monarch Butterflies have been encountered, identified and documented.

17. Project provides drainage and erosion and control measures to protect marine, stream, and wetland water quality from urban runoff and erosion;
   • Conditions of approval have been included to ensure compliance with applicable erosion control measures.

18. Geologic/engineering reports have been prepared by qualified professional for projects in seismic areas, geologically unstable areas, or coastal bluffs, and project complies with hazard protection policies including provision of appropriate setbacks and mitigation measures;
   • Geologic/engineering reports have been prepared by qualified professionals for this project. Conditions of approval have been included to ensure the project applicant shall comply with all applicable requirements of the most recent version of the California Building Standards Code.

19. All other geological, flood and fire hazards are accounted for and mitigated in the project design;
   • Conditions of approval have been included to ensure the project complies with geological, flood, and fire hazards and are accounted for and will be mitigated in the project design.

20. Project complies with shoreline structure policies;
   • The proposed project is not located along a shoreline.

21. The uses proposed are consistent with the permitted or conditional uses of the zoning district in which the project is located;
   • This use is an allowed use consistent with the R-1 (Single-Family Residential) zoning district.

22. Conformance to requirements of all other city ordinances, zoning requirements, and project review procedures; and
   • The project conforms to the requirements of all city ordinances, zoning requirements, and project development review and development procedures.

23. Project complies with the Capitola parking permit program as follows:
   a. The village area preferential parking program areas and conditions as established in Resolution No. 2596 and no permit parking of any kind shall be allowed on Capitola Avenue.
   b. The neighborhood preferential parking program areas are as established in Resolution Numbers 2433 and 2510.
   c. The village area preferential parking program shall be limited to three hundred fifty permits.
Neighborhood permit areas are only in force when the shuttle bus is operating except that:

i. The Fanmar area (Resolution No. 2436) program may operate year-round, twenty-four hours a day on weekends,

ii. The Burlingame, Cliff Avenue/Grand Avenue area (Resolution No. 2435) have year-round, twenty-four hour per day “no public parking.”

e. Except as specifically allowed under the village parking program, no preferential residential parking may be allowed in the Cliff Drive parking areas.

f. Six Depot Hill twenty-four minute “Vista” parking spaces (Resolution No. 2510) shall be provided as corrected in Exhibit A attached to the ordinance codified in this section and found on file in the office of the city clerk.

g. A limit of fifty permits for the Pacific Cove parking lot may be issued to village permit holders and transient occupancy permit holders.

h. No additional development in the village that intensifies use and requires additional parking shall be permitted. Changes in use that do not result in additional parking demand can be allowed and exceptions for onsite parking as allowed in the land use plan can be made.

- The project site is not located within the area of the Capitola parking permit program.

### Building Information

**Project Description:**
- Remodel of three existing buildings consisting of Building A: 900 sq.ft., Building B: 601 sq.ft., and Building C: 507 sq.ft. Building C square footage reducing to 499 sq.ft. Bringing the total remodel area to 2,000 square feet.
- Remodel to include interiors, new roofs, new exterior siding, and new windows and doors.
- Building A adding 145 sq.ft. new heated square footage.
- Convert existing duplex (Building A) to a single family dwelling, remove kitchen from Building B and convert Building C into an accessory dwelling unit.

SUBJECT: 203 Esplanade #20-0160 APN:035-211-04

Conditional Use Permit and Design Permit for a take-out window for Zelda’s Restaurant located within the CV (Central Village) zoning district. This project is in the Coastal Zone but does not require a Coastal Development Permit.

Environmental Determination: Categorical Exemption
Property Owner: Jill Ealy
Representative: Jill Ealy Filed: 05.14.2020

APPLICANT PROPOSAL
The applicant is requesting a Conditional Use Permit (CUP) and Design Permit for a take-out window at Zelda’s Restaurant located at 110 Esplanade in the CV (Central Village) zoning district. The proposed use is consistent with the General Plan and Zoning Ordinance with the issuance of a Conditional Use Permit.

BACKGROUND
On May 12, 2020, the City received an application for a Conditional Use Permit and Design Permit for a take-out window at Zelda’s Restaurant in response to the “Order of the County Health Officer to Shelter in Place (effective May 1, 2020)” (Order) due to the Novel Coronavirus Disease 2019 (“COVID-19”). The restaurant has been operating under the Order with curbside pickup service only. In anticipation of the restaurant opening at decreased capacity, the owner is seeking a take-out window to allow customers that do not want to eat in the restaurant to pick up food while maintaining safe distancing at the front door.

DISCUSSION
Zelda’s Restaurant is located on the Esplanade adjacent to Tacos Morenos and My Thai Beach. There is beach access between Zelda’s and My Thai Beach. Zelda’s is unique in that the parcel wraps around the parcel with Tacos Morenos, with the restaurant on the west side and a large outdoor dining deck located on the east side directly adjacent to the Capitola Beach.

The applicant is requesting approval of a CUP to a take-out window along the front façade of the building adjacent to the front door. The proposal includes replacing the existing 3 foot 8-inch by 3 foot 8-inch picture window with a single-hung, double-paned, Tuscany window of the exact same proportions (Attachment 2). The window is located in front of the existing interior coffee bar. The owner plans to serve coffee beverages, some grab-and-go items, as well as items off the main menu (Attachment 1).
In response to the Order, the owner will place social distancing markers along the front walkway to que patrons to stand six feet apart. Also, as restaurants are preparing to open with decreased occupancy due to required separation between tables, the take-out window will provide a safe alternative to dining inside the restaurant during the current Order.

Conditional Use Permit
A take-out window in the Central Village requires a CUP. Also, the structure at 203 Esplanade is historic. Any modification to a historic structure requires a CUP. The proposed take-out window is subject to the following considerations in the zoning code.

17.60.030 Considerations
A. In considering an application for a conditional use, the planning commission shall give due regard to the nature and condition of all adjacent uses and structures. In issuing a conditional use permit, the commission may impose requirements and conditions with respect to location, design, siting, maintenance and operation of the use in addition to those expressly provided in this chapter for the particular use, as may be necessary for the protection of the adjacent properties and in the public interest.

B. In approving a use permit, the commission may include such conditions as the commission deems reasonable and necessary under the circumstances to preserve the integrity and character of the district and to secure the general purposes of this title, the general plan, and the local coastal program. Such conditions, without limiting the discretion and authority of the commission, may include time limitations, further architectural and site review, street dedication, and street and drainage improvements.

C. In considering an application for a conditional use involving a material change of an historic feature the planning commission shall weigh the benefits of the proposed change against the detriment to the public welfare caused by a change in the feature. In approving any such change, the commission shall make one of the following findings:

1. The action proposed will not be significantly detrimental to the historic feature in which the change in use is to occur; or
2. The applicant has demonstrated that denial of the application would result in hardship that is so substantial as to outweigh the corresponding benefit to the public of maintenance to the historic feature or structure.

The proposed to-go window is located along the Espanade sidewalk and will have impacts to pedestrian circulation and create increased demand on the public trash receptacles. The proposal includes mitigation measures for circulation through the introduction of social distancing markers along the front walkway to que patrons to stand six feet apart along the building frontage. A safe path of travel along the sidewalk will be maintained with no impacts to Americans with Disabilities Act (ADA) requirements. In terms of impacts on the public trash receptacles, a condition of approval has been added requiring the restaurant to pay a trash impact fee beginning one year after the current shelter in place has been lifted if the use is to continue. The impact fee will mitigate the increased demand on the public trash receptacles.

The proposal is minor in terms of modifications to the historic structure. The existing picture will be replaced and only change in function through the introduction of the double hung window. The proposal has been reviewed for consistency with the Secretary of Interior Standards by staff and is found to be in compliance. Specifically, the proposal complies with standards one, nine, and ten as stated below and followed by staff analysis:
1. A property shall be used for its historic purpose or be placed in a new use that requires minimal change to the defining characteristics of the building and its site and environment.

Staff Analysis: Incorporation of a double hung window to allow a new use is a minor change that will not have a negative impact on the historic characteristics of the building or site.

9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.

Staff Analysis: The alteration to the window does not destroy historic materials that characterize the property. The window being replaced is not an original window, and the replacement window will match the existing window opening in size.

10. New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

Staff Analysis: The window alteration will not impact the essential form and integrity of the historic property.

**CEQA**

Section 15331 of the CEQA Guidelines exempts projects limited to maintenance, repair, stabilization, rehabilitation, restoration, preservation, conservation or reconstruction of historical resources in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings. City staff reviewed the project for compatibility with the Secretary of the Interior's Standards for Rehabilitation (Standards) and found that the proposed take-out window complies with the Standards. Specifically the project complies with Standards 1, 9, and 10. Therefore, the project qualifies for this CEQA exemption. No adverse environmental impacts were discovered during project review by either the Planning Department Staff or the Planning Commission.

**RECOMMENDATION**

Staff recommends the Planning Commission approve application #20-0160, subject to the following conditions and based upon the following findings:

**CONDITIONS OF APPROVAL**

1. The project approval consists of the replacement of an existing window in a commercial structure with a restaurant use (Zelda's Restaurant) with a take-out window. The proposed project is approved as indicated on the final plans reviewed and approved by the Planning Commission on June 4, 2020, except as modified through conditions imposed by the Planning Commission during the hearing.

2. If the take-out window is in use on year after the Shelter in Place Order has been lifted, the use will be required to pay an annual trash impact fee.

3. The restaurant owner is responsible for maintaining ADA path of travel along the Esplanade sidewalk.
4. Prior to construction, a building permit shall be secured for any new construction or modifications to structures authorized by this permit. Final building plans shall be consistent with the plans approved by the Planning Commission. All construction and site improvements shall be completed according to the approved plans.

5. At time of submittal for building permit review, the Conditions of Approval must be printed in full on the cover sheet of the construction plans.

6. Prior to making any changes to approved plans, modifications must be specifically requested and submitted in writing to the Community Development Department. Any significant changes to the size or exterior appearance of the structure shall require Planning Commission approval.

7. Prior to issuance of building permit, all Planning fees associated with permit #20-0160 shall be paid in full.

8. Prior to issuance of a building permit, the applicant must provide documentation of plan approval by the following entities: Santa Cruz County Sanitation Department, Soquel Creek Water District, and Central Fire Protection District.

9. Prior to any work in the City road right of way, an encroachment permit shall be acquired by the contractor performing the work. No material or equipment storage may be placed in the road right-of-way.

10. During construction, any construction activity shall be subject to a construction noise curfew, except when otherwise specified in the building permit issued by the City. Construction noise shall be prohibited between the hours of nine p.m. and seven-thirty a.m. on weekdays. Construction noise shall be prohibited on weekends with the exception of Saturday work between nine a.m. and four p.m. or emergency work approved by the building official. §9.12.010B

11. Compliance with all conditions of approval shall be demonstrated to the satisfaction of the Community Development Director. Upon evidence of non-compliance with conditions of approval or applicable municipal code provisions, the applicant shall remedy the non-compliance to the satisfaction of the Community Development Director or shall file an application for a permit amendment for Planning Commission consideration. Failure to remedy a non-compliance in a timely manner may result in permit revocation.

12. This permit shall expire 24 months from the date of issuance. The applicant shall have an approved building permit and construction underway before this date to prevent permit expiration. Applications for extension may be submitted by the applicant prior to expiration pursuant to Municipal Code section 17.81.160.

13. The planning and infrastructure review and approval are transferable with the title to the underlying property so that an approved project may be conveyed or assigned by the applicant to others without losing the approval. The permit cannot be transferred off the site on which the approval was granted.

**DESIGN PERMIT FINDINGS**

A. The application, subject to the conditions imposed, will secure the purposes of the Zoning Ordinance and General Plan. Community Development Department Staff and the Planning Commission have reviewed...
the application and determined that a conditional use permit may be granted for a take-out window in an existing commercial structure with an existing restaurant use (Zelda’s) within the CV Zoning District. The use meets the intent and purpose of the Central Village Zoning District. Conditions of approval have been included to ensure that the use is consistent with the Zoning Ordinance and General Plan.

**B. The application will maintain the character and integrity of the neighborhood.**

Community Development Department Staff and the Planning Commission have reviewed the proposed take-out window use and determined that the use complies with the applicable provisions of the Zoning Ordinance and maintain the character and integrity of this area of the City. Conditions of approval have been included to carry out these objectives.

**CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) FINDINGS**

**A. This project is categorically exempt under Section 15331 of the California Environmental Quality Act and is not subject to Section 753.5 of Title 14 of the California Code of Regulations.**

Section 15331 of the CEQA Guidelines exempts projects limited to maintenance, repair, stabilization, rehabilitation, restoration, preservation, conservation or reconstruction of historical resources in a manner consistent with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings. City staff reviewed the project for compatibility with the Secretary of the Interior’s Standards for Rehabilitation (Standards) and found that the proposed take-out window complies with the Standards. Specifically, the project complies with Standards 1, 9, and 10. Therefore, the project qualifies for this CEQA exemption. No adverse environmental impacts were discovered during project review by either the Planning Department Staff or the Planning Commission.

**CONDITIONAL USE PERMIT FINDINGS**

**A. The action proposed will not be significantly detrimental to the historic feature in which the change in use is to occur.**

The proposal is minor in terms of modifications to the historic structure. The existing picture window will be replaced with a single-hung, double-paned, Tuscany window and only change in function through the introduction the take-out food use. The proposal has been reviewed for consistency with the Secretary of Interior Standards (Standards) by staff and is found to be in compliance. Specifically, the proposal complies with Standards 1, 9, and 10. The action proposed will not be significantly detrimental to the historic feature in which the change in use is to occur.

**ATTACHMENTS:**

2. 203 Esplanade - Proposed Take-Out Window Specs - 05.13.2020

Prepared By: Katie Herlihy
Community Development Director
May 26, 2020

To Whom It May Concern:

I am writing regarding a take-out window permit for Zeldas Restaurant. The window closest to the front door would be replaced with a single hung double paneled Tuscany window measuring 44 inches by 44 inches. The area is currently our coffee bar and is open during dining hours, generally 7am – 10pm. We sell coffee beverages, some grab and go items, as well as prepare our desserts in said area. The coffee bar is already operated by several employees that prepare items to be served to tables in addition to customers walking up and just wanting a cup of coffee and a muffin to go.

We anticipate the area being used much as it already is, only instead of lining up in the restaurant as they have in the past, customers can socially distance themselves while lining up outside close the building. I have ordered social distance markers and will place them in front of the window and properly spaced to the right, away from the front door. We will also be adding additional grab and go items such as breakfast burritos, cups and bowls of chowder, etc.

Although we anticipate opening in the next couple weeks, we know we will be doing with significantly less tables and sales. We hope a take-out window could provide us with an additional income stream as well as way to offer our food and beverage to customers not comfortable dining in. These are obviously uncharted times and as such I don’t really know how a take-out window will be received by our customer or its functionality for the restaurant. I do know that I am committed to it for a minimum of a year. I understand that if the take-out window remains after the pandemic that we will be required to pay an annual fee for garbage.

Thank you for your time,

Jill Ealy.

Attachment: 203 Esplanade - Proposed Take-Out Window Specs - 05.13.2020 (203 Esplanade)
STAFF REPORT

TO: PLANNING COMMISSION

FROM: COMMUNITY DEVELOPMENT

DATE: JUNE 4, 2020

SUBJECT: 1400 Wharf Road #20-0141 APN: 034-072-01&02

Design Permit, Conditional Use Permit, and Initial Study/Mitigated Negative Declaration for the rehabilitation and repair of the historic Capitola Wharf located within the PF (Public Facilities) zoning district.

This project requires a Coastal Development Permit issued by the California Coastal Commission which is appealable.

Environmental Determination: Mitigated Negative Declaration

Property Owner: City of Capitola

Representative: Kailash Mozumder, Filed: 04.29.2020

APPLICANT PROPOSAL

The City of Capitola is proposing a 7,400 square-foot widening of the existing Capitola Wharf, a new 400 square-foot restroom facility to replace the existing restroom facility on the wharf, a new restroom facility at the base of the wharf, a new security gate, and modifications to the wharf entrance gates and trestle circulation. The Capitola Wharf is located at 1400 Wharf Road in the PF (Public Facilities) zoning district.

BACKGROUND

The Capitola Wharf was constructed in 1857 and has been modified, repaired, and rebuilt multiple times. The most recent structural changes were in 1981, where significant portions of the Wharf were replaced, and during the in 2019-2020 storm season, where the Wharf required emergency repairs due to wave damage. Uses for the wharf varied during its early existence, but since the 1920s it has been utilized for sport fishing and recreation. In 1999, the Capitola City Council adopted the Historic Structures List, which identified the Capitola Wharf as a historic structure.

On May 13, 2020, the Architectural and Site Review Committee reviewed application #20-0141 and provided the applicant with the following direction:

Public Works Representative, Kailash Mozumder: informed the Committee that the 30-day California Environmental Quality Act (CEQA) comment period for the project ended on May 9, 2020, and that comments had been received from the California Coastal Commission (CCC) and the California Department of Fish and Wildlife (DFW).

Building Department Representative, Robin Woodman: stated that the guardrail height will not be an issue and that all other aspects of the project can be addressed during building permit
phase. Ms. Woodman informed the applicant that a lower guardrail could potentially be used for Americans with Disability Act (ADA) fishing access and that any single-use restrooms must be ADA-accessible and gender neutral.

Local Architect, Frank Phantom: approved of the design. Mr. Phantom inquired as to why the new piles are all vertical rather than splayed, similar to the existing piles and Mr. Mozumder clarified that new piles will be vertical but the jacketed steel piles will remain slanted.

Local Architectural Historian, Carolyn Swift: inquired about whether the memorial entry gate will be retained, even though it is not historic, and was informed by Mr. Mozumder that the memorial gate will remain, but the security gate will be replaced. Mrs. Swift stated that she appreciated the effort that was made to maintain the historic appearance of the wharf and that she agreed with architectural historian Leslie Dill’s recommendations.

Assistant Planner, Sean Sesanto: had no comments.

DISCUSSION
The Capitola Wharf is located next to the Capitola Village within the Capitola Beach Cultural Landscape District and adjacent to the Venetian Historic District. The Village is one of the original settlement areas and has a high concentration of historic structures. The Wharf begins at the terminus of Wharf Road and spans approximately 866 feet in length. The Wharf is publicly accessed by foot travel but is also accessed by motor vehicles primarily for handicap access and boat launching. The Wharf contains several small structures, including two commercial structures, a restroom facility, a boat ramp, and an entrance gate.

Design Permit
The applicant is proposing to widen the existing 20-foot-wide trestle by 16 feet for a total width of 36 feet. The expanded portion would match the initial 85 feet of the trestle. The expansion would increase the wharf area by approximately 7,400 square feet, includes a separation of travel for pedestrians and vehicles, and would utilize wooden materials compatible with the existing design supported by 120 new fiberglass piles with polyethylene sleeves.

Other features of the proposal include a new metal security gate situated before the wharf restaurant and adjacent structures, modifications to the existing decorative entrance gate, a new bathroom at the foot of the wharf, and replacement of the existing bathroom facility behind the restaurant. The new metal security gate will match the existing one but span the width of the expanded wharf. The new decorative entrance gate will match the style of the existing one but be modified to span the width of the expanded wharf. Initial design elements for the new and replacement bathroom facilities include vertical wooden batten siding with stainless steel metal roof and doors. The final bathroom design will maintain a utilitarian aesthetic that is differentiated from the historic elements of the wharf itself.

Conditional Use Permit
The proposed project includes significant alterations to the historic Capitola Wharf structure at 1400 Wharf Road. Significant alterations to a historic structure require approval of a Conditional Use Permit by the Planning Commission. Also, historic resources are identified as environmental resources within the California Environmental Quality Act (CEQA). Any modification to a historic resource must comply with the Secretary of Interior Standards for Rehabilitation before a Mitigated Negative Declaration (MND) for the project can be adopted.

Architectural Historian Leslie Dill reviewed the project and identified the following character-defining features of the wharf:
1. The location and orientation, including the connection to the end of Wharf Road.
2. The visually abundant round wooden piles, some in a regular pattern and some irregular.
3. The continuous-height wood-plank deck, at the height of the end of Wharf Road.
4. Its narrower entrance width and wider end (a design effected during the 1950s).
5. The inclusion of hoists and other technical boating and fishing equipment.

Ms. Dill found that the proposed wharf rehabilitation, additions, and alterations have been designed to comply as well as feasible with the Standards. Four project elements did not include detailed elevations or complete details due to the public bidding process and were outlined in Standards 6 and 9 as warranting further study to assess historical compatibility. With the recommended review of the following design elements prior to construction, Ms. Dill found the proposal to be substantially compatible with the Secretary of the Interior's Standards:

- The exterior of the new and repaired piles are of compatible texture and finish.
- The prefabricated restrooms are of compatible design, scale, materials, and location.
- The modified entrance gates utilize appropriate design, scale, and materials.
- The new security gates utilize appropriate design, scale, and materials.

The historic report is included as Attachment 3.

Staff included Condition of Approval #2 requiring the final plans be reviewed by the Community Development Director for consistency with the Secretary of Interior Standards 6 and 9 prior to building plan approval.

Flood Zone
The project is located within the 100-year flood zone, based on the Federal Emergency Management Agency (FEMA) 2016 map. However, the project does not involve increasing conditioned/habitable space. The project consists primarily of structural and public access improvements. As part of the project, utility lines would be relocated to above the wharf deck, reducing likelihood of sustaining wave damage.

Coastal Permit
The California Coastal Commission’s (CCC) is responsible for authorizing the Coastal Development Permit (CDP) for the entirety of the proposed project because the entire wharf is located within the Commission’s retained coastal permitting jurisdiction. A Coastal Development Application is required through the CCC subsequent to the Capitola’s adoption of the IS/MND.

CEQA
This project is subject to the requirements of the California Environmental Quality Act (CEQA). The City of Capitola is the lead agency for the proposed project.

Under §15070 of the CEQA Guidelines, a public agency shall prepare or have prepared a proposed negative declaration or mitigated negative declaration for a project subject to CEQA when:

a) The initial study shows that there is no substantial evidence, in light of the whole record before the agency, that the project may have a significant effect on the environment, or
b) The initial study identifies potentially significant effects, but:
   1. Revisions in the project plans or proposals made by, or agreed to by the applicant before a proposed mitigated negative declaration and initial study are
released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur, and
2. There is no substantial evidence, in light of the whole record before the agency, that the project as revised may have a significant effect on the environment.

An Initial Study and Mitigated Negative Declaration (IS/MND) was prepared by Moffat & Nichol (Attachment 1). The IS/MND determined that the proposed project could result in potentially significant effects on biological resources, cultural resources, hydrology and water quality, and noise, but that the potential impacts could be reduced to less than significant with mitigation measures.

A Mitigation Monitoring and Reporting Program (MMRP) was prepared pursuant to Section 21081.6 of the California Public Resources Code, which requires public agencies to “adopt a reporting and monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment” (Appendix F of Attachment 1).

A Notice of Intent to Adopt a Mitigated Negative Declaration (NOI) was circulated for a 30-day public review period between April 9, 2020 and May 9, 2020 (Attachment 4). Comments were received from the California Department of Fish and Wildlife (DFW) and the California Coastal Commission (CCC).

The DFW letter provided context regarding their role as a Trustee Agency under CEQA, provided a summary of the marine resources in California’s central coast and Monterey Bay and their associated commercial and recreational value, and expressed concerns about the treated timber piles and the nesting bird survey proposed for the project. In response, mitigation measures MM HWQ-2 and MM BIO-4 were modified to reflect the proposed DFW changes.

The CCC letter: (1) provided clarification on the CCC’s jurisdictional authority over the Project; (2) summarized attributes of the Project that fulfill Coastal Act objectives related to public access, recreation, and fishing; (4) requested that the proposed restrooms, security gate, and entryway should be designed to be aesthetically pleasing and to maximize public view opportunities; (5) stated a preference for vibratory pile installation over impact pile driving installation to minimize sediment dispersal and noise impacts on marine mammals; and (6) inquired about the life expectancy of the proposed project elements. In response, Table 1 and Section 3.4 of the IS/MND were modified to include stronger language about the CCC’s coastal permitting jurisdiction over the project. The City response also noted CCC concerns, identified areas of the IS/MND that addressed the other concerns, and answered the additional questions.

The DFW and CCC comment letters and full responses are included in Appendix G of Attachment 1.

Prior to approving a project, the decision-making body of the lead agency shall consider the proposed negative declaration or mitigated negative declaration together with any comments received during the public review process. The decision-making body shall adopt the proposed negative declaration or mitigated negative declaration only if it finds on the basis of the whole record before it (including the initial study and any comments received), that there is no substantial evidence that the project will have a significant effect on the environment and that the negative declaration or mitigated negative declaration reflects the lead agency’s independent judgment and analysis. The lead agency shall also adopt a program for reporting
on or monitoring the changes which it has either required in the project or made a condition of approval to mitigate or avoid significant environmental effects.

The Mitigation Monitoring and Reporting Program (MMRP) prepared for the project addresses potentially significant impacts related to biological resources, cultural resources, hydrology and water quality, and noise and includes mitigation measures that will mitigate or avoid significant effects on the environment. The MMRP is included as Appendix F of Attachment 1.

**RECOMMENDATION**
Staff recommends the Planning Commission review the application and approve project #20-0141 based on the following Conditions of Approval and Findings.

**CONDITIONS OF APPROVAL**

1. The project approval consists of a Design Permit, Conditional Use Permit, and Initial Study/Mitigated Negative Declaration for the rehabilitation and repair of the historic Capitola Wharf, including a 7,400 square-foot widening of the existing Capitola Wharf, construction of a new 400-square-foot restroom facility at the base of the wharf, replacement of the existing restroom facility on the wharf, construction of a new security gate, and modifications to the wharf entrance gates and trestle circulation. The proposed project is approved as indicated on the final plans reviewed and approved by the Planning Commission on June 4, 2020, except as modified through conditions imposed by the Planning Commission during the hearing.

2. Final plans are subject to review and approval by the Community Development Director for consistency with the Secretary of the Interior’s Standards for Rehabilitation. Specifically, based on the recommendations in the architectural historian’s report, the Community Development Director shall review the following elements for compatibility with the historic resource:
   a. Texture and finish of proposed exterior of the new piles and repaired piles
   b. Design, scale, materials, location, etc., of the prefabricated restrooms
   c. Design, scale, materials, etc., of the altered entrance gates: scale, materials, etc.
   d. Design, scale, materials, etc., of the new security gates

3. The applicant shall comply with the Mitigation Monitoring and Reporting Program (MMRP) in Appendix F of the Initial Study and Mitigated Negative Declaration prepared by Moffat and Nichol in June 2020.

4. Prior to construction of any occupied building, a building permit shall be secured for any new construction or modifications to structures authorized by this permit. Final building plans shall be consistent with the plans approved by the Planning Commission. All construction and site improvements shall be completed according to the approved plans.

5. At time of submittal for building permit review, the Conditions of Approval must be printed in full on the cover sheet of the construction plans.

6. Prior to issuance of a building permit, the applicant must provide documentation of plan approval by the following entities: Santa Cruz County Sanitation Department, Soquel Creek Water District, and Central Fire Protection District.

7. During construction, any construction activity shall be subject to a construction noise curfew, except when otherwise specified in the building permit issued by the City. Construction noise shall be prohibited between the hours of nine p.m. and seven-thirty a.m. on weekdays. Construction noise shall be prohibited on weekends with the
exception of Saturday work between nine a.m. and four p.m. or emergency work approved by the building official. §9.12.010B

8. This permit shall expire 48 months from the date of issuance. The applicant shall have an approved building permit and construction underway before this date to prevent permit expiration. Applications for extension may be submitted by the applicant prior to expiration pursuant to Municipal Code section 17.81.160.

DESIGN PERMIT FINDINGS

A. The project, subject to the conditions imposed, secures the purposes of the Zoning Ordinance, General Plan, and Local Coastal Plan.
Community Development Staff, the Architectural and Site Review Committee, and the Planning Commission have all reviewed the project. The proposed 7,400 square-foot widening of the existing Capitola Wharf, construction of a new 400-square-foot restroom facility at the base of the wharf, replacement of the existing restroom facility on the wharf, construction of a new security gate, and modifications to the wharf entrance gates and trestle circulation comply with the development standards of the PF (Public Facilities) zoning district. The project secures the purpose of the Zoning Ordinance, General Plan, and Local Coastal Plan.

B. The project will maintain the character and integrity of the neighborhood.
Community Development Staff, the Architectural and Site Review Committee, and the Planning Commission have all reviewed the project. The proposed 7,400 square-foot widening of the existing Capitola Wharf, construction of a new 400-square-foot restroom facility at the base of the wharf, replacement of the existing restroom facility on the wharf, construction of a new security gate, and modifications to the wharf entrance gates and trestle circulation will fit nicely with the existing neighborhood and the surrounding coastal area. The project will maintain the character and integrity of the neighborhood.

CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) FINDINGS

A Mitigated Negative Declaration has been prepared based upon the findings of an Initial Study which identified that the project may have a significant effect on the environment. The Mitigated Negative Declaration was circulated for a 30-day public review period between April 9, 2020 and May 9, 2020. Based on the analysis in the IS/MND and the comments received, a Mitigation Monitoring and Reporting Program (MMRP) was included in the IS/MND as Appendix F. The Planning Commission finds, on the basis of the whole record before it (including the initial study and any comments received), that there is no substantial evidence that the project will have a significant effect on the environment and that the negative declaration or mitigated negative declaration reflects the lead agency’s independent judgment and analysis. The MMRP has been incorporated into the conditions of approval by reference to ensure that impacts are reduced to a less than significant level.

CONDITIONAL USE PERMIT FINDINGS

A. The action proposed will not be significantly detrimental to the historic feature in which the change in use is to occur.
Architectural Historian Leslie Dill reviewed the project for compatibility with the Secretary of the Interior’s Standards for Rehabilitation and found that, with the recommended future review of four components of the design, the Capitola Wharf Resiliency and Public Access Improvement Project is substantially compatible with the Secretary of the
Interior’s Standards for the Treatment of Historic Properties. The architectural historian also found that the project can be found to preserve substantially the historic integrity of the historic resource and of the identified Capitola Beach Cultural Landscape District. The Planning Commission reviewed the project and weighed the benefits of the proposed change against the detriment to the public welfare caused by a change in the feature and found that the project will not be significantly detrimental to the historic feature in which the change in use is to occur.

INTRODUCTION

1.1 Summary

The City of Capitola (City) has determined that the proposed Capitola Wharf Resiliency, Public Access, and New Restroom Project (Project), and the required discretionary actions of the City for the Project, require compliance with the guidelines and regulations of the California Environmental Quality Act (CEQA). This Initial Study and Mitigated Negative Declaration (IS/MND) addresses the direct, indirect, and cumulative environmental effects associated with the proposed Project.

This IS/MND has been prepared in conformance with the California Environmental Quality Act of 1970, as amended (Public Resources Code Sections 21000 et seq.); Section 15070 of the State Guidelines for Implementation of the California Environmental Quality Act of 1970 (“CEQA Guidelines”), as amended (CCR, Title 14, Chapter 3, Section 15000 et seq.), and applicable requirements of the Lead Agency, the City of Capitola (https://www.cityofcapitola.org/communitydevelopment/page/permit-information-and-guidance).

This IS/MND has determined that the proposed Project would result in potentially significant environmental impacts; however, mitigation measures are proposed that would reduce any potentially significant impact to less than significant levels. As such, an IS/MND is deemed as the appropriate document to provide the necessary environmental evaluations and clearance. Minor revisions to the Draft IS/MND were made in this Final IS/MND for purposes of clarification on pile installation methodology and in response to comments received during the public review period. Such revisions are shown as underlined where additions are made and shown as strike through where deletions are made with the exception of the cover page, headers/footers and updated table of contents. Comments received during public review did not identify any new or potentially significant environmental impacts beyond those already covered in the circulated Draft IS/MND. In response to comments received by the California Department of Fish and Wildlife, mitigation measure MM BIO-4 regarding nesting bird surveys was revised and mitigation measure MM HWQ-2 regarding use of treated timber piles has been added. Potential impacts remain less than significant. The comment letters are included as a new Appendix G.

1.2 Statutory Authority and Requirements

In accordance with CEQA (Public Resources Code Sections 21000-21177) and pursuant to Section 15063 of the CEQA Guidelines set forth at Title 14 of the California Code of Regulations (CCR), the City is the Lead Agency for the Project undergoing environmental review in this document. Acting in the capacity of CEQA Lead Agency, the City is required to undertake the preparation of an Initial Study (IS) to provide the City with information to use as the basis for determining whether an Environmental Impact Report (EIR), Negative Declaration (ND), or Mitigated Negative Declaration (MND) would be appropriate for providing the necessary environmental documentation for the proposed Project.

The purpose of an IS is to: (1) identify potential environmental impacts; (2) provide the Lead Agency with information to use as the basis for deciding whether to prepare an EIR or ND; (3) enable the project
sponsor/applicant or Lead Agency to modify a project, mitigating adverse impacts before an EIR is prepared; (4) facilitate environmental assessment early in the design of a project; (5) provide documentation of the factual basis for the finding in a ND that a project would not have a significant environmental effect; (6) eliminate needless EIRs; (7) determine whether a previously prepared EIR could be used for a project; and (8) assist in the preparation of an EIR, if required, by focusing the EIR on the effects determined to be significant, identifying the effects determined not to be significant, and explaining the reasons for determining that potentially significant effects would not be significant.

Section 15063 of the CEQA Guidelines identifies global disclosure requirements for inclusion in an IS. Pursuant to those requirements, an IS must include: (1) a description of the project, including the location of the project; (2) an identification of the environmental setting; (3) an identification of environmental effects by use of a checklist, matrix or other method, provided that entries on a checklist or other form are briefly explained to indicate that there is some evidence to support the entries; (4) a discussion of ways to mitigate significant effects identified, if any; (5) an examination of whether the project is compatible with existing zoning, plans, and other applicable land use controls; and (6) the name of the person or persons who prepared or participated in the preparation of the IS.

According to Section 15065(a) of the CEQA Guidelines, an EIR must be prepared for a project if any of the following conditions occur:

- The project has the potential to: substantially degrade the quality of the environment; substantially reduce the habitat of a fish or wildlife species; cause a fish or wildlife population to drop below self-sustaining levels; threaten to eliminate a plant or animal community; substantially reduce the number or restrict the range of an endangered, rare, or threatened species; or eliminate important examples of the major periods of California history or prehistory.

- The project has the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals.

- The project has possible environmental effects that are individually limited but cumulatively considerable. “Cumulatively considerable” means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.

- The environmental effects of a project will cause substantial adverse effects on human beings, either directly or indirectly.

According to Section 15070(a) of the CEQA Guidelines, a ND is deemed appropriate if the IS shows that there is no substantial evidence, in light of the whole record before the Lead Agency, that the project may have a significant effect on the environment.

According to Section 15070(b), a MND is deemed appropriate if it identifies potentially significant effects, but:
• Revisions in the project plans or proposals made by or agreed to by the sponsor/applicant before a proposed IS/MND is released for public review would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur; and

• There is no substantial evidence, in light of the whole record before the agency, that the project as revised may have a significant effect on the environment.

1.3 Intended Uses of this Initial Study and Mitigated Negative Declaration

This IS/MND is intended to be an informational document for the City as Lead Agency, the general-public, and for responsible agencies to review and use when approving subsequent discretionary actions for the Project. The resulting documentation is not a policy document, and its approval and/or certification neither presupposes nor mandates any actions on the part of those agencies from whom permits and other discretionary approvals would be required.

The Notice of Intent (NOI) to Adopt a MND and supporting analysis is subject to a 30-day public and agency review period (April 9, 2020 to May 9, 2020). During this review, comments on the document should be addressed to the City. Following review of any comments received, the City will consider these comments as a part of this Project’s environmental review and include them with the IS/MND documentation for consideration by the Capitola Planning Commission and City Council if needed. This document is available at the City Community Development Department, 420 Capitola Avenue, Capitola, CA 95010.

1.4 Supportive Documentation

1.4.1 Tiered Documents

As permitted in Section 15152(a) of the CEQA Guidelines, information and discussions from other documents can be included into this document. Tiering is defined as follows:

“Tiering refers to using the analysis of general matters contained in a broader EIR (such as the one prepared for a general plan or policy statement) with later EIRs and negative declarations on narrower projects; incorporating by reference the general discussions from the broader EIR; and concentrating the later EIR or negative declaration solely on the issues specific to the later project.”

For this document, the Capitola General Plan Update (Capitola 2019), referred to as the General Plan, serves as the broader document since it analyzes the entire City that contains the Project site. However, as discussed, site-specific impacts, which this broader document could not adequately address, are provided in this IS/MND for certain issue areas. This IS/MND evaluates each of those site-specific environmental issue areas and will rely upon analysis contained within the General Plan and General Plan Update EIR with respect to remaining issue areas where appropriate.
Tiering also allows this document to comply with Section 15152(b) of the CEQA Guidelines, which discourages redundant analyses, as follows:

“Agencies are encouraged to tier the environmental analyses which they prepare for separate but related projects including the general plans, zoning changes, and development projects. This approach can eliminate repetitive discussion of the same issues and focus the later EIR or negative declaration on the actual issues ripe for decision at each level of environmental review. Tiering is appropriate when the sequence of analysis is from an EIR prepared for a general plan, policy or program to an EIR or negative declaration for another plan, policy, or program of lesser scope, or to a site-specific EIR or negative declaration.”

Section 15152(d) of the CEQA Guidelines further states:

“Where an EIR has been prepared and certified for a program, plan, policy, or ordinance consistent with the requirements of this section, any lead agency for a later project pursuant to or consistent with the program, plan, policy, or ordinance should limit the EIR or negative declaration on the later project to effects which:

1. Were not examined as significant effects on the environment in the prior EIR; or

2. Are susceptible to substantial reduction or avoidance by the choice of specific revisions in the project, by the imposition of conditions, or other means.”

1.4.2 Incorporation by Reference

Incorporation by reference is a procedure for reducing the size of environmental documents and is most appropriate for including long, descriptive, or technical materials that provide general background information but do not contribute directly to the specific analysis of the project itself. This procedure is particularly useful when an EIR or ND relies on a broadly drafted EIR for its evaluation of cumulative impacts of related projects. (Las Virgenes Homeowners Federation v. County of Los Angeles (1986) 177 Cal.App.3d 300.) If an EIR or ND relies on information from a supporting study that is available to the public, the EIR or ND cannot be deemed unsupported by evidence or analysis (San Francisco Ecology Center v. City and County of San Francisco (1975) 48 Cal.App.3d 584, 595.). This document incorporates by reference the document from which it is tiered, the Capitola General Plan Update (Capitola 2019) and General Plan Update EIR (Capitola 2013).

When an EIR or ND incorporates a document by reference, the incorporation must comply with Section 15150 of the CEQA Guidelines as follows:

The incorporated document must be available to the public or be a matter of public record (CEQA Guidelines Section 15150(a)). The General Plan is available, along with this document, at the City Community Development Department, 420 Capitola Avenue, Capitola, CA 95010.
This document must be available for inspection by the public at an office of the lead agency (CEQA Guidelines Section 15150(b)). This document is available at the City Community Development Department, 420 Capitola Avenue, Capitola, CA 95010.

This document must summarize the portion of the document being incorporated by reference or briefly describe information that cannot be summarized. Furthermore, this document must describe the relationship between the incorporated information and the analysis in the General Plan (CEQA Guidelines Section 15150(c)). As discussed above, the General Plan addresses the entire City and provides background and inventory information and data which apply to the Project site. Incorporated information and/or data will be cited in the appropriate sections.

This document must include the State identification number of the incorporated document (CEQA Guidelines Section 15150(d)). The State Clearinghouse Number for the General Plan EIR is 2013072002.

The material to be incorporated in this document will include general background information (CEQA Guidelines Section 15150(f)).

1.4.3 Technical Studies

This IS/MND also utilizes information provided in the following documents:

- Capitola Wharf Department of Parks and Recreation Primary Record (Dill, Leslie. 2019a)
- Proposed Replacement Pile Material, Capitola Wharf Rehabilitation Project, Initial Secretary of the Interior’s Standard Review (Dill, Leslie. 2019b)
2.0 INITIAL STUDY / ENVIRONMENTAL CHECKLIST

2.5 Project Location

The Project site is in the City of Capitola, Santa Cruz County, California (Figure 1: Regional and Vicinity Map, Figure 2: Project Location Map, and Figure 3: Project Boundaries).

2.6 General Plan / Zoning Designations

Land Use Designation: Parks and Open Space (P/OS) (Capitola Land Use Map 2010).

General Plan Zoning: Public Facility (PF); Central Village (CV); Residential Overlay; Transient Rental Overlay (Capitola Zoning Map 2018).

2.7 Environmental Setting and Surrounding Land Uses

The Project is located at the Capitola Wharf (Wharf) in the City of Capitola, Santa Cruz County, California. The Wharf extends from Capitola Beach into Monterey Bay and supports one lane of both vehicular and foot traffic. Vehicular and foot traffic is not separated. The Wharf is primarily used for recreational activities and contains a bait shop, boat rentals, boat launch, restaurant, restroom facilities on the backside of the restaurant, and fish cleaning stations. Motor vehicle access is open to the public and primarily serves public boat launching, handicap parking, and restaurant employee and patron parking. A floating dock with access onto the Wharf is available in the summer.
The Wharf is approximately 866 feet long from the Wharf foot, where it connects to the road and beach parking area, to the Wharf face, and can be divided into two sections: the trestle and Wharf head. The Wharf trestle is approximately 543 feet long. The trestle is approximately 20 feet wide for the majority of the trestle. There is a small 85-foot-long section at the front of the trestle that is approximately 36 feet wide. The trestle connects the shore to the larger Wharf head, which is approximately 323 feet long and 60 feet wide. The restaurant, boat rentals, boat launch, summer dock, parking area, and restroom facilities are located on the Wharf head.

The Wharf is supported on piles that are 12 to 14-inch diameter creosote treated timbers aligned in rows (“bents”) perpendicular to the Wharf centerline at 12-foot nominal spacing. There are typically three piles per bent along the trestle, and six piles at the Wharf head. The Wharf head also includes twelve 14-inch diameter steel piles (six plumb and six batter) at the face. These steel piles were installed to increase the stiffness of the Wharf end to resist wave forces and resulting deflection. The piles support timber cap (10 x 12) beams (pile caps) that span across the bent. The caps support stringers (6 x 12) that support the Wharf decking (3 x 12). Photograph 2 shows the structural framing configuration.

The Wharf is zoned as “Public Use.” To the east of the Wharf the beachfront area is zoned as Parks and Open Space. To the east and west of the Wharf the area is zoned as “Neighborhood Mixed Use,” which generally supports a mix of residential, hotel, and commercial uses. There is residential housing immediately to the west of the Wharf. Further north, past Cliff Drive, the area is zoned for Single-Family Residential.

2.8 Project Background

The elevation of the Wharf’s deck structure, 20 feet Mean Lower Low Water (MLLW), is below the crest elevation of incoming waves that are experienced during large storm events. As a result, the Wharf is at risk of being damaged by relatively frequent storms. The Wharf experiences damage to the supporting foundation piles in winter storms when floating logs batter the piles. Depending on the severity of the storm, the resulting damage can require Wharf closure. The section of the pier containing the narrow trestle with only three supporting piles per row is the most susceptible element to damage that has historically required Wharf closure (Photograph 2). Wharf closures can happen up to two times a year and can have negative impacts on the community through loss of business and through restriction of over water access along the Wharf, which is a regular activity for many residents and visitors. Wharf widening is proposed as a measure to increase resiliency to future pile damage.

Wharf widening would also improve public access and safety by allowing for separate vehicle and pedestrian travel areas. Currently, approximately 458 linear feet of the existing Wharf structure is 20 feet wide. This current configuration creates pedestrian and vehicle conflicts for pier users and vehicles traveling between the Wharf foot and Wharf head.

Capitola Beach and the Wharf also currently lack adequate restroom facilities to serve beach goers and Wharf-users. The only existing restrooms serving these populations is the bathroom at the back of the restaurant, which is outdated and difficult to find. During the summer months porta potties are added at
the beach end of the Wharf. The addition of restroom facilities would better accommodate residents and visitors by providing improved access to restroom facilities.

2.9 Project Description

The proposed Project would increase Wharf resiliency and improve public safety by expanding a section of the Wharf’s existing narrow trestle system and by completing necessary repairs (Appendix A). The Project would also provide improved public access with an expanded bridge deck that reduces pedestrian and vehicular conflicts and by constructing two new restroom facilities for beach and Wharf users.

Wharf expansion would add resiliency to the most vulnerable portion of the Wharf that has sustained the most critical damage in the past. Expansion would include a new composite pile and timber structure expansion area. The new expansion area would widen the trestle 16 feet for approximately 458 feet. This would widen the trestle to 36 feet to match the first 85-foot long portion of the trestle at the foot of the Wharf. Up to 120, 16-inch composite (fiberglass) piles would be added as part of the expansion. Fiberglass piles would have High-density polyethylene (HDPE) sleeves to provide UV and battering protection. The timber decking expansion area would be constructed with Ammoniacal Copper Zinc Arsenate (ACZA) treated timber. The expansion would result in an overwater increase of approximately 7,400 square feet. As part of the expansion, two separate travel areas would be created, one for pedestrians and one for vehicles. This is anticipated to improve public access and safety.

Existing deteriorated Wharf elements would be repaired and/or replaced as needed. Maintenance and repairs would include:

- Approximately 21, 12-inch damaged creosote treated piles would be repaired or replaced with 12-inch round timber or fiberglass piles;
- The 12 steel piles at the Wharf head would be repaired by either splicing on new steel pipe to the existing piles above the bay bottom, or by placing fiberglass jackets around these piles and grouting the inside;
- The exposed existing ACZA treated timber decking (approximately 26,500 square feet) would be replaced and 4,500 square feet of ACZA treated timber decking would be placed on top of the decking to serve as vehicle runners;
- Up to 260 linear feet of pile caps and 680 linear feet of stringers would be replaced;
- The hoist landing area would be repaired by replacing damaged timber or fiberglass members and metal connection hardware in kind; and
- Wharf utilities (water, sewer, and electric) would be relocated above deck to protect the utility lines from wave damage. They would be placed within the brace of the rail system, similar to the existing gas line.
The Project also proposes public use and access improvements including the following:

- A new security gate (used to maintain the existing operations schedule) on the trestle where the foot of the Wharf meets the head of the Wharf;
- Modification of the decorative Wharf gate at the foot of the Wharf near the shore;
- Pedestrian improvements such as improved lighting and increased number and size of benches; and
- The bathroom at the Wharf head behind the restaurant would be replaced. A new bathroom at the Wharf foot would be constructed.

Once Project construction is complete, the Wharf would continue to operate similar to existing conditions. No change in use or intensity of use is proposed or anticipated.

**Construction Methods**

Wharf widening, repairs, and improvements would be completed concurrently. Total Project duration is anticipated to take up to 9 months. Construction work would occur Monday through Friday, 8:00 AM to 5:00 PM and Saturday from 9:00 AM to 4:00 PM. Construction would be prohibited between the hours of 9:00 PM and 7:30 AM on weekdays. Construction noise would be prohibited on weekends with the exception of Saturday work between 9:00 AM and 4:00 PM (Capitola Municipal Code 2019). Work that depends on the low tide cycle may be permitted outside of these hours with approval from the City and a minimum of 5 days advance request. The Wharf would be closed during construction due to the risk of construction hazards. The work would be performed during the off season (approximately September through May) to restore public access for the following busy summer season.

The proposed Project would require the use of cranes, diesel hammers, and vibratory hammers, and hydraulic jets for pile driving, power chain saws, pneumatic tools, and electric power and hand tools. Work would be performed from the Wharf deck, to the maximum extent practical, with small boat assistance as needed. A barge-mounted crane may be used if selected by the construction contractor. Pile jacketing and steel pile repair may be performed from a small boat and with a diver as needed.

Staging would occur on the deck of the Wharf or on a floating barge. Construction equipment and materials would be transported via a truck on the Wharf deck or by barge. The use of a barge is not anticipated but may be preferred by the selected contractor. Construction methods for the proposed widening, repairs, and improvements are described in further detail below.

**Wharf Widening**

The widening would require the use of cranes, diesel hammer, and vibratory hammers, and hydraulic jets for pile driving, power chain saws, pneumatic tools, and electric power and hand tools. The piles
would be composite material (fiberglass) installed primarily with a vibratory hammer, and, if needed, an impact hammer for the last few feet. Dense layers of sand have been observed beneath the Wharf, which could make pile driving difficult and time consuming. The inclusion of hydraulic jetting as another pile driving method allows the selected contractor to modify their pile driving methods if deemed necessary during construction. Hydraulic jetting works by directing pressurized water flow down the pile to the soils directly beneath it. Hydraulic jetting liquefies the soils at the pile tip reducing friction and causing the pile to descend downwards under its own weight. Hydraulic jetting can be used to decrease pile driving time and the number of impact blows required to drive piles. A combination of vibratory, hydraulic jetting, and impact pile driving may, therefore, be used.

Fiberglass piles would have High-density polyethylene (HDPE) sleeves. Work would be performed from the Wharf deck with a crane and pile driver, to the maximum extent practical, with small boat assistance as needed. A barge-mounted crane with pile driving hammer may be used if selected by the construction contractor. Pile driving activities are anticipated to last two (2) to three (3) months to complete both the Wharf Widening and Repairs described in the section below.

Repairs

Damaged piles (timber and steel) would be repaired by installing a fiberglass jacket around the pile. Fiberglass jackets would be filled with marine grade grout to fill the deteriorated section and seal off the pile from the bay water. The jacket would be sealed within the bay water and extend above high tide to allow grout placement without any grout coming into contact with the bay water. Pile jacket installation would be performed by a small boat and diver. Grout would be injected by a sealed hose pumping the grout from above or from the shore.

Piles that are missing or severely deteriorated would be restored by driving a new pile adjacent to, or in the place of the damaged pile. New piles would be fiberglass or timber. Timber piles would be ACZA treated piles with an inert polyurea coating (e.g. Thunderbolt Industries) prior to installation. A combination of vibratory, hydraulic jetting, and impact pile driving may, be used. Timber or fiberglass piles would be driven with an impact hammer.

Improvements

The new restrooms at the Wharf head and foot are modular and primarily fabricated offsite. They would be delivered to the site by truck and installed at the Wharf with hand tools and power tools. Public benches would also be constructed using hand tools and power tools.

The new security gate and most of the decorative gate would be constructed of metal and fabricated offsite. They would be delivered to the site by truck and installed at the Wharf with a small crane, power tools, and hand tools.

Personnel and Equipment List
Approximately 15 workers are anticipated to be onsite depending on construction stage and associated equipment use. The personnel and pieces of equipment listed below could be used at any time during the 9-month duration of the Project.

- Impact pile driver
- Vibratory pile driver/extractor
- Hydraulic jet for pile driving
- Pneumatic tools
- Power (electric and gas) saws
- Power tools
- Hand tools
- Cranes
- Small boat
- A barge-mounted crane (if selected by the construction contractor)
- A diver (as needed)
- Floating barge for staging (use of a barge is not anticipated but may be preferred by the selected contractor)
- Trucks for transportation of construction equipment and materials

2.10 Other Permits and Approvals

This IS/MND is intended to be an informational document for the City, as Lead Agency, to review and use when approving subsequent discretionary actions for this Project. Table 1 provides a potential, but not exhaustive, list of other responsible agencies, trustee agencies, and/or entities that may rely upon this IS/MND to grant subsequent discretionary approvals and/or permits, where applicable, related to Project implementation.

### 2.11 Consultation with California Native American Tribe(s)

Coordination between Moffatt & Nichol (M&N) and the City occurred in January 2020 to identify any tribes that have previously requested to be notified about City projects under AB 52. This coordination effort found that no tribes have requested notification with the City under AB 52. Because no tribes have requested notification or consultation, the City is not required to consult under AB 52.
2.12 Environmental Factors Potentially Affected

All potential environmental impacts listed below are addressed in this IS. Those that are checked below have been identified as involving at least one impact that is a “Potentially Significant Impact” as indicated by the checklist on the following pages for which mitigation measures have been identified to reduce the impact to less than significant.

- Aesthetics
- Agriculture and Forestry Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Geology/Soils
- Greenhouse Gas Emissions
- Hazards & Hazardous Materials
- Hydrology/Water Quality
- Land Use/Planning
- Mineral Resources
- Noise
- Population/Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities/Service Systems
- Wildfire
- Mandatory Findings of Significance

2.13 Determination (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed Project COULD NOT have a significant effect on the environment, and
a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures described on an
attached sheet (Appendix F) have been added to the Project. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed Project MAY have a significant effect on the environment, and an
ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed Project MAY have a “potentially significant impact” or “potentially
significant unless mitigated” on the environment, but at least one effect 1) has been adequately
analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed
by mitigation measures based on the earlier analysis as described on attached sheets, if the effect is
a “potentially significant impact” or “potentially significant unless mitigated.” An
ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that
remain to be addressed.

☐ I find that although the proposed Project could have a significant effect on the environment, there WILL NOT be a significant effect in this case because all potentially significant effects (a)
have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have
been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures
that are imposed upon the proposed Project, nothing further is required.

Title: Public Works Project Manager
3.0 ENVIRONMENTAL ANALYSIS

The environmental analysis provided below in Section 3.0 is patterned after the IS Checklist recommended by the CEQA Guidelines, as amended, and used by the City in its environmental review process. For the environmental review undertaken as part of this IS preparation, a determination that there is a potential for significant effects indicates the need to more fully analyze the Project’s impacts and to identify mitigation.

For the evaluation of potential impacts, the questions in the IS Checklist are stated and an answer is provided according to the analysis undertaken as part of this IS. The analysis considers the short-term, long-term, direct, indirect, and cumulative impacts of the Project. However, as mentioned above, operational changes to the Wharf are not proposed and, therefore, long-term operational impacts are not anticipated. There are four possible responses to each question:

- **No impact.** The Project would not have any measurable environmental impact on the environment.

- **Less than significant impact.** The Project would have the potential to impact the environment, although this impact would be negligible, it would be below established thresholds that are considered to be significant and/or would be reduced to less than significant with the implementation of established plans, policies, procedures and/or regulations.

- **Less than significant with mitigation.** The Project would have the potential to generate impacts, which may be considered as a significant effect on the environment, although mitigation measures or changes to the Project’s physical or operational characteristics would reduce these impacts to levels that are less than significant.

- **Potentially significant impact.** The Project could have impacts that may be considered significant and, therefore, additional analysis is required to identify mitigation measures that could reduce potentially significant impacts to less than significant levels.

The following is a discussion of potential Project impacts as identified in the Initial Study/Environmental Checklist. Explanations are provided for each item.
Aesthetics

Except as provided in Public Resources Code Section 21099, would the Project:

<table>

<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
<tr>
<td>d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?</td>
<td>☐</td>
<td>☐</td>
<td>☒</td>
</tr>
</tbody>
</table>

3.1 Aesthetics

a) Would the Project have a substantial adverse effect on a scenic vista?

*Less than significant impact.* There are no officially designated scenic vistas or view corridors in the City (City of Capitola 2013). Public views of the Wharf and backdrop of Monterey Bay are available from Capitola Beach and from nearby roadways including Cliff Drive, Esplanade, and Monterey Avenue. None of these views would be impacted with the Project’s proposed trestle and bridge deck widening or with the proposed construction of two small restroom facilities. Construction equipment would temporarily be visible on the Wharf deck during construction; however, this potential visual impact would be short-term and minor. Therefore, potential impacts are considered less than significant, and no mitigation is required.

b) Would the Project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

*No impact.* There are no officially designated scenic highways within the city limits of Capitola (City of Capitola 2013). Highway 1 is eligible to become officially designated but is located over 0.85 mile from the Project site. In addition, no damage to a scenic resource including tree removal or rock removal are proposed. No impacts would occur and no mitigation is required.
c) Would the Project substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the Project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

No impact. The proposed Project would result in very minor changes to the Wharf’s existing structure with the trestle and bridge deck widening and with the construction of two small restroom facilities. These proposed changes are anticipated to be barely noticeable and have no impact on the existing visual character of the Wharf or on existing public views from the community. In addition, the proposed Project is consistent with the current zoning of the Project site, which is zoned as PF. No impact is anticipated, and no mitigation is required.

d) Would the Project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

No impact. The Project proposes no new sources of substantial light or glare. No new structures are proposed with highly lit or reflective surfaces that could impact day or nighttime views. The new restroom facilities would have lighting consistent with building code standards and existing Wharf lighting. No construction nightwork is proposed that would require the use of lighting work areas. No impacts are anticipated and no mitigation is required.

Cumulative Impacts

No impact. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant aesthetic impact in consideration of the proposed Project. No impacts are anticipated, and no mitigation is required.

Avoidance, Minimization, and/or Mitigation Measures

No significant impacts were identified and no mitigation measures are required.

Capitola General Plan Update (City of Capitola 2019); General Plan Update EIR (City of Capitola 2013).
Agricultural and Forest Resources

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board.

3.2 Agricultural and Forest Resources

a) Would the Project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

**No impact.** The Project footprint is confined to the existing Wharf and immediately adjacent tidal lands. No upland work is proposed. According to the California Department of Conservation (CDC) Farmland Mapping and Monitoring Program’s California Important Farmland Finder, adjacent land is classified as Urban Built-up Land (CDC 2019). The Project site would not be located on or encroach upon Prime
Farmland, Unique Farmland, or Farmland of Statewide Importance. No existing or planned farming operations occur here. Impacts are not anticipated and no mitigation is required.

b) Would the Project conflict with existing agriculture zoning for agricultural use, or a Williamson Act contract?

**No impact.** There are no Williamson Act contracts within the Project site or City’s greater planning area (City of Capitola 2013). The Project site is not located on land designated or zoned for agricultural use. The zoning for the Project site is Public Facility (PF) (City of Capitola 2018); therefore, the Project would not conflict with zoning for agricultural use or a Williamson Act contract. No impacts are anticipated, and no mitigation is required.

c) Would the Project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

**No impact.** As previously discussed, the zoning for the Project site is PF (City of Capitola 2018). The Project site is not located on or adjacent to land designated for forest land, timberland, or timberland zoned timberland production. No impacts are anticipated and no mitigation is required.

d) Would the Project result in the loss of forest land or conversion of forest land to non-forest use?

**No impact.** See discussion under 3.2.c) above.

e) Would the Project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

**No impact.** As previously discussed, the Project site neither contains forest land nor forest resources. As also discussed above, no existing or planned farming operations occur in or adjacent to the Project site. Therefore, impacts are not anticipated and no mitigation is required.

**Cumulative Impacts**

**No impact.** No agricultural or forest resources are present. No potential for cumulative impacts exists.

**Avoidance, Minimization and/or Mitigation Measures**

No significant impacts were identified and no mitigation measures are required.

**Sources**

Air Quality

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. – Would the Project:

<table>
<thead>
<tr>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
</table>

a) Conflict with or obstruct implementation of the applicable air quality plan?

b) Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard.

c) Expose sensitive receptors to substantial pollutant concentrations?

d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?

3.3 Air Quality

The Project is located within the North Central Coast Air Basin (NCCAB). Air quality in the NCCAB is influenced by airflow patterns associated with inland and ocean temperatures. Warmer temperatures in inland valley areas in the Monterey Bay area can increase the ground temperature and intensify onshore airflow during the afternoon and evening. Occasionally the airflow is reversed, and weak offshore winds are created. When this occurs, the air mass can be held in place by the Pacific High-Pressure Cell, which can cause pollutants to build up for days. Northern or easterly winds can cause pollutant transport from the Central Valley or the San Francisco Bay area into the NCCAB. In the winter and early spring there is typically an absence of deep, persistent inversions and occasional storms, which typically results in improved air quality. The NCCAB is a nonattainment area under the California Ambient Air Quality Standards (CAAAQS) for particulate matter of 10 microns or less in diameter (PM$_{10}$) and ozone. The NCCAB is in attainment of all National Ambient Air Quality Standards (NAAQS).

Health risks associated with PM$_{10}$ include premature mortality, aggravation of respiratory and cardiovascular disease, changes in lung function and increased respiratory symptoms, changes to lung tissues and structure, and altered respiratory defense mechanisms. In 2005, the NCCAB daily PM$_{10}$ emissions were approximately 102 tons per day. Approximately 35% of all PM$_{10}$ emissions were from road dust, 20% from windblown dust, 15% from agricultural tilling, 17% from waste burning, 4% from construction and mobile sources, and 9% from industrial processes and other sources.
Ozone is found in two layers in the atmosphere, the troposphere and the stratosphere. The stratospheric layer protects the earth from harmful ultraviolet (UV) rays and is referred to as the “good” ozone. The “bad” ozone is a photochemical pollutant. Nitrogen oxides (NOx) and volatile organic compounds (VOC) are considered primary compounds contributing to the formation of ozone. Health risks associated with short-term exposure to ozone include damage to the lungs, decreases in pulmonary function, and impairment of immune mechanisms. In 2008, daily VOC emissions in the NCCAB were approximately 76 tons and NOx emission were approximately 79 tons. On-road mobile sources accounted for approximately 23% of VOC and 49% of NOx emissions.

a) Would the Project conflict with or obstruct implementation of the applicable air quality plan?

**No impact.** The California Clean Air Act (CCAA), which was approved in 1988, requires that each local air district prepare and maintain an Air Quality Management Plan (AQMP) to achieve compliance with CAAQS. The Monterey Bay Unified Air Pollution Control District (MBUAPCD) is one of 35 air quality management districts established to protect air quality in California and is responsible for regulating stationary, indirect, and area sources of pollution within the NCCAB and for implementing the AQMP for the NCCAB. The NCCAB is a nonattainment area under the CAAQS for PM10 and ozone. The NCCAB is in attainment of all NAAQS. Consistency determinations with the AQMP are used by the MBUAPCD to assess a project’s cumulative impact on regional air quality (i.e., ozone levels) (MBUAPCD 2008) and potential conflicts-with or obstruction-to implementation of the AQMP. The MBUAPCD adopted CEQA Air Quality Guidelines in October 1995 (revised February 2008). This IS utilizes MBUAPCD’s CEQA criteria and thresholds to assess the proposed Project’s potential impacts on air quality.

**Construction Emissions**

The Project’s construction activities would produce temporary emissions of nonattainment pollutants, primarily from diesel combustion equipment during the 9 months of proposed construction. The MBUAPCD has established screening thresholds analyzing PM10 and ozone emissions. Based on MBUAPCD’s PM10 thresholds, a construction site with minimal earthmoving activity would have potentially significant PM10 impacts when active construction covers 8.1 acres or more per day. In addition, a construction site with earthmoving activity would have potentially significant PM10 impacts when active construction covers 2.2 acres or more per day. Projects below these screening thresholds are assumed to be below the 82 pounds per day (lb/day) PM10 threshold of significance (MBUAPCD 2008). The MBUAPCD requires projects that exceed these screening thresholds to quantify their emissions and identify applicable mitigation measures to reduce emissions below the 82 lb/day. Because the proposed Project would not involve earthmoving activities and occurs within an area of less than 1 acre, the Project is not anticipated to produce PM10 emissions that exceed the threshold of significance.

Per the MBUAPCD’s criteria for determining construction impacts for ozone, construction projects that use “typical construction equipment” are accommodated in the emission inventories of State and federally required air plans and would not have a significant impact on the attainment and maintenance...
of ozone CAAQS. The Project proposes to use typical construction equipment and would, therefore, not be anticipated to result in a significant ozone emissions impact.

It should be noted that the MBUAPCD does not have construction thresholds for other criteria pollutants such as VOC, carbon monoxide (CO), NO<x> or PM<sub>2.5</sub>. Emissions from the proposed typical construction equipment are anticipated to be minor and temporary. In addition, implementation of standard construction equipment best management practices (BMP) would further ensure that construction emissions of other criteria pollutants would not have a significant impact. The Project is not anticipated to conflict with or disrupt any MBUAPCD air quality regulations or AQMP. No impacts are anticipated and no mitigation is required.

**Operational Emissions**

MBUAPCD’s thresholds of significance for operational impacts, specific to the NCCAB, are listed below. Accordingly, air quality impacts resulting from the implementation of the proposed Project would not be considered significant if they would result in the following:

a) emit less than 137 lb/day of VOC or NO<x>;

b) directly emit less than 550 lb/day of CO or will not cause a violation of CO AAQS at existing or reasonably foreseeable receptors;

c) not significantly impact traffic levels of service or will not cause a violation of CO AAQS or contribute 550 lb/day to an existing or projected violation at existing or reasonably foreseeable receptors;

d) directly emit less than 82 lb/day of PM<sub>10</sub> on-site or will not cause a violation of PM<sub>10</sub> AAQS or contribute 82 lb/day to an existing or projected violation at existing or reasonably foreseeable receptors;

e) not indirectly generate PM<sub>10</sub> along unpaved roads or will not cause a violation of PM<sub>10</sub> AAQS or contribute 82 lb/day to an existing or projected violation at existing or reasonably foreseeable receptors; and

f) directly emit less than 150 lb/day of SO<sub>x</sub> or will not cause a violation of sulfur dioxide (SO<sub>2</sub>) AAQS at existing or reasonably foreseeable receptors.

The Project only proposes structural enhancements and public access improvements at the existing Wharf. No increase in facility use or operations are proposed that could lead to a direct or indirect increase in the emission of pollutants listed above. Additional vehicular travel is not anticipated, only improvements to public safety by allowing for separated pedestrian and vehicular travel. No unpaved roads or new pollutant emitting equipment are a part of the Project. The Project does not otherwise propose changes to roadway intersections or roadways that would change the level of service (LOS), increase traffic, increase delays, or decrease capacity. Therefore, no operational impacts would occur.
associated with localized CO emissions. Operational impacts are not anticipated, and no mitigation is required.

b) Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard?

No impact. Cumulative impacts are impacts that may not result from individually minor project contributions but may result from collectively significant multiple project contributions. The MBUAPCD has developed a policy to address the cumulative impacts of CEQA Projects. The policy holds the cumulative threshold to be the same as the project-level threshold and indicates that project impacts are cumulatively considerable if they exceed the project-specific AQMP significance thresholds. Based on the discussion provided above in Section 3.3.a), the Project would not result in a project-level exceedance of the PM10 or ozone screening thresholds. Therefore, the Project would not result in a cumulatively considerable impact and no mitigation is required.

c) Would the Project expose sensitive receptors to substantial pollutant concentrations?

Less than significant impact. The General Plan EIR identifies residences, schools, playgrounds, childcare centers, athletic facilities, churches, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes as sensitive receptors. These receptors contain segments of the population most susceptible to poor air quality. The nearest sensitive receptors to the Project site by type are as follows:

- Areas zoned as single-family residences are located approximately 0.5 miles northwest of the Wharf and areas zoned as neighborhood mixed-use are approximately 30 feet east of the Wharf. Additionally, Capitola Venetian Hotel is located approximately 86 feet (0.2 miles) east of the Wharf. The closest residential receptor to the Project’s main work area (as measured by distance between the receptor and location of where the new expanded deck would begin near the Wharf foot) is 80 feet.

- The nearest school is Opal Cliffs School located approximately 0.3 miles west of the Wharf.

- The nearest park to the Project is Esplanade Park approximately 0.2 miles east of the Wharf. Although not identified as a park in the General Plan, Capitola Beach is a public beach and the Wharf is used for recreational activities such as boating and fishing.

- The nearest health center is Capitola Health Center approximately 0.2 miles (1,000 feet) north of the Wharf.

The Project proposes standard equipment such as pile drivers, cranes, a small boat, barge-mounted crane, floating barge, and trucks for transporting equipment and materials. Equipment usage would require the burning of diesel fuel and would emit VOC, CO, NOx, and PM emissions.
Impacts to sensitive receptors are typically evaluated in terms of exposure to toxic air contaminants (TACs). The California Air Resources Board (CARB) classifies diesel particulate matter (DPM) emissions as a TAC. Proposed construction activities would result in short-term emissions of DPM from the combustion of diesel fuel from construction equipment. The burning of diesel fuel can produce both PM$_{2.5}$ and PM$_{10}$ emissions. The CARB uses PM$_{10}$ emissions from diesel exhaust as a surrogate for DPM. According to the CARB 2017 off-road model and anticipated equipment use (Appendix C), estimated PM emissions would be 15.90 lb/day and would not exceed the 82 lb/day MBUAPCD significance threshold. This analysis is conservative as it assumes three pieces of 250 hp equipment running 10 hours per day and assumes older (40 years) higher-polluting equipment. It is more likely that newer equipment would be used, run times would be shorter, and engines would be smaller, resulting in less than 15.90 lb/day of DPM.

Other criteria pollutants such as VOC, CO, and NO$_X$ emissions do not have construction emissions thresholds. The Project proposes to use typical construction equipment and would, therefore, not be anticipated to result in a significant ozone emissions impact.

Health effects from carcinogenic TACs are usually described in terms of individual cancer risk, which is based on a 70-year lifetime exposure to TACs. The proposed Project construction period of 9 months would be much less than the 70 years used for risk determination. Also, equipment would be moved throughout the Project site during construction activities and not remain near a particular receptor over the 9-month period. Generally speaking, the work would range from 80 feet to the nearest receptor, for work near the Wharf foot, to over 500 feet to the nearest receptor, for work near the Wharf head. Once construction is complete, the Wharf would continue to operate similar to existing conditions with no expanded use. Based on the analysis above, the proposed Project would not expose sensitive receptors to substantial TAC emissions during construction or operations; potential impacts are considered less than significant, and no mitigation is required.

d) Would the Project result in other emissions (such as those leading to odors adversely affecting a substantial number of people)?

Less than significant impact. The Project does not propose land uses or facilities that have been identified as likely to be affiliated with the generation of odors (MBUAPCD 2008). The Project only proposes structural enhancements and public access improvements at the existing Wharf. There is no proposed change in land use or increase in use. The Project would not result in operational odor emissions impacts.

Project construction would temporarily generate air pollutants due to the combustion of diesel fuel during the 9-month Project. The Wharf would be closed to the public during construction, which would reduce odor exposure within the immediate vicinity of the proposed construction activities. Some individuals using adjacent areas may sense that diesel combustion emissions are objectionable, although there is no approved method of quantifying the odor impacts of these emissions to the public. Emissions associated with construction activities would be dispersed over the Project area, short-term, and transient.
Therefore, potential impacts from the proposed construction activities are anticipated to be less than significant and no mitigation is required.

**Cumulative Impacts**

**Less than significant impact.** Less than significant impacts are anticipated from the Project. The proposed Project would result in temporary emissions during construction but is not anticipated to result in significant emission increases or conflict with established plans. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant air quality impact in consideration of the proposed Project. Project impacts are anticipated to be less than significant and no mitigation is required.

**Avoidance, Minimization and/or Mitigation Measures**

No significant impacts were identified and no mitigation measures are required.

**Sources**

California Environmental Quality Act Air Quality Guidelines (MBUAPCD 2008); General Plan Update EIR (City of Capitola 2013).
### Biological Resources

Would the Project:

<table>
<thead>
<tr>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
</table>

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?  

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?  

c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?  

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?  

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?  

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

#### 3.4 Biological Resources

The analysis and findings presented in this section are based on the Biological Technical Report for Capitola Wharf Resiliency and Public Access Improvement Project (Dudek 2020), Appendix B of this IS. As part of the Biological Technical Report, existing biological resource conditions within the Action Area, defined as the greatest area of potential impacts as shown on Figure 4, were initially investigated through review of pertinent scientific literature. Federal register listings, protocols, and species data provided by the United States Fish and Wildlife Service (USFWS) were reviewed in conjunction with anticipated federally listed species potentially occurring within the Action Area. The California Natural Diversity Database (CNDDB) was also reviewed for all pertinent information regarding the locations of...
known occurrences of sensitive species in the vicinity of the Project. The literature review also included
a query of the USFWS Information, Planning, and Conservation (IPaC) System, National Oceanic and
Atmospheric Administration (NOAA) California Species List Tools, USFWS Environmental
Conservation Online System, NOAA Fisheries Species of Concern, CDFW commercial landings, and
the NOAA Environmental Sensitivity Index (ESI). In addition, numerous regional planning documents
and biological resource reports for projects within or near to the Action Area were reviewed.

a) Would the Project have a substantial adverse effect, either directly or through habitat modifications,
on any species identified as a candidate, sensitive, or special status species in local or regional plans,
policies, or regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife
Service?

Less than significant with mitigation. Capitola Beach and Monterey Bay provide diverse habitat for a
variety of wildlife including special status species. The marine habitats in the vicinity of the Wharf consist
of various intertidal, kelp forest, and open-water habitats (Figure 4, Dudek 2020). The Monterey Bay
National Marine Sanctuary (MBNMS) is home to numerous mammals, seabirds, fishes, invertebrates, and
algae in a remarkably productive coastal environment. To protect marine habitats, mitigation measure
MM BIO-1 would require a qualified biologist to lead an on-site environmental training for work crews
prior to the start of the proposed Project to protect the surrounding biological resources identified in this
Section.

Biological resources within the Action Area (Figure 4, Dudek 2020) were investigated through review of
pertinent scientific literature and databases, as further described in Appendix B. The Action Area is
defined as the greatest area of potential impacts. Special status species with a high to moderate likelihood
of occurring in the Action Area are summarized below. More information on these species can be found
in Appendix B.

Special-status fish species: Special-status fish species with a high likelihood of occurring in the Action
Area include: steelhead (*Oncorhynchus mykiss*), Coho salmon (*Oncorhynchus kisutch*), Chinook (*Oncorhynchus
tshawytscha*), and green sturgeon (*Acipenser medirostris*). Potential impacts to special-status fish species from
the proposed Project could occur due to noise, physical disturbance, water quality, and impacts to prey
species as discussed below in detail.

Noise: Noise has the potential to directly impact fish by causing physical injury or altering behavior when
noise threshold levels are exceeded (NMFS 2008). The interim injury criteria noise threshold is 206
decibels (dB) peak and 187 dB accumulated sound energy levels (SEL) above for all fish, except those
less than 2 grams in body weight, for which 183 dB is the SEL threshold. The mean single strike SEL for
impact installation of fiberglass piles has been recorded at 142 dB SEL at 41 meters from the source
(Appendix B). Impact pile driving of timber piles could result in underwater noise levels of up to 172 dB
root mean square (RMS)\(^1\) at 10 meters or 160 db SEL at 10 meters from the source (Caltrans 2015 as cited in Dudek 2020). Therefore, fiberglass pile installation is not anticipated to produce noise that would exceed the interim injury criteria threshold. Furthermore, the Project proposes to use vibratory installation to the extent feasible, which is anticipated to produce less noise than impact pile driving. In addition, hydraulic jetting may be used to decrease pile driving time and the number of impact blows required to drive piles. Hydraulic jetting works by directing pressurized water flow down the pile to the soils directly beneath it, liquefying the soils at the pile tip, reducing friction, and causing the pile to descend downwards under its own weight. Hydraulic jetting would not be anticipated to produce substantial noise. The noise analysis presented in this study conservatively assumes a worst-case scenario using only vibratory and impact pile installation.

The installation of 12- to 14-inch timber piles showed RMS ranging from 158 to 172 dB at a distance of 10 meters at one location and 140 to 158 dB RMS at a second location (Caltrans 2015b as cited in Dudek 2020). If timber piles are installed, the threshold could be exceeded within a small area no greater than 18 meters around the pile for fish less than 2 grams and 10 meters for fish greater than 2 grams; however, it is unlikely that fish would occur within this small area near the construction activities. Furthermore, a pile driving soft start required under MM NOI-2 would allow fish to move out of the area prior to the most intensive pile driving activities. Additionally, this analysis conservatively assumes 500 blows per day (5 piles at 100 blows each); however in actuality, far less are likely.

Special-status and other fish in the same area may be exposed to temporary increased sound levels, but installation of piles would not be expected to cause physical injury or mortality to fish species. The activity associated with pile driving would likely temporarily drive fish from the immediate vicinity of the pile, reducing the likelihood of exposure to higher peak sound levels. In addition, mitigation measure MM NOI-2, which is described in detail under Section 3.13, would require the contractor to begin pile driving using a “soft start” that would gradually increase in impact intensity and allow fish more time to leave the immediate work area before maximum sound levels are reached. MM NOI-2 would help to ensure noise impacts on fish would be temporary and less than significant.

Physical Disturbances: Physical disturbances during pile driving activities could occur to benthic sediments near the isolated pile installation locations. Benthic disturbances would likely cause fish to temporarily avoid the immediate construction area. Fish eggs and larval, juvenile, and adult fish would likely experience few to no effects due to construction activities. Fish eggs and larval fish are primarily found in the water column and are dispersed by water movement away from the intertidal zone during lower

\(^1\) RMS refers to the sound pressure level that is square root of the sum of the squares of the pressure contained within a defined period from the initial time to the final time. For marine mammals, the RMS pressure historically has been calculated over the period of the pulse that contains 90 percent of the acoustical energy (Caltrans 2015b).
tides, when work on the Wharf is expected to occur. Less than significant physical disturbance impacts are anticipated.

**Water Quality:** Decreased water quality has the potential to impact fish. Pile driving may result in short-term temporary discharge of sediments into already turbid surface waters, which could cause a very minor increase in the water's turbidity in the immediate vicinity on a temporary basis. Hydraulic jetting has the greatest potential to cause sediment disturbances among the three installation methods; however, in-water construction activities would occur within intertidal and shallow subtidal areas, which regularly experience turbidity from wave action on the sandy shoreline. In addition, Soquel Creek discharges high levels of turbidity adjacent to the Wharf. Therefore, potential turbidity elevations above baseline would be minimal. Based on the environmental conditions at the site, discussions with the project engineers, and informal discussions with the regulatory agencies on April 20, 2020 and April 28, 2020, water quality impacts from the use of hydraulic jetting would be less than significant and no mitigation is required.

The Project would be required to follow BMPs and permit conditions, for compliance with the required regulatory permits, to protect water quality. Potential examples of BMPs and permit conditions include, but are not limited to the following: the contractor would develop a spill plan prior to construction, vehicle staging would occur away from tidal waters, and to the extent feasible Wharf expansion would occur at low tide to minimize contact of construction equipment with water. Compliance with all BMPs and permit conditions for potential temporary impacts to water quality would be ensured through implementation MM HWQ-1 included in Section 3.10, ensuring potential temporary impacts to water quality would be less than significant.

Long-term water quality impacts could occur from the installation of treated wood piles. The majority of piles would be fiberglass. However, some existing treated timber piles may be replaced with ACZA treated timber piles coated in polyurea. Polyurea is a spray coating expected to minimize the possibility of copper leaching from the ACZA treated piles.

Potential long-term impacts would also be less than significant with the implementation of MM HWQ-1 and corresponding BMPs and permit conditions. The Project would comply with all BMPs recommended by NOAA (2009) for using treated pilings (or piles) including the following:

1. Selecting wood products that have been third-party verified as containing no more than the minimum level of pesticide needed for the use;

2. Wrapping or coating the pilings to form a physical barrier between the leachable material and the aquatic environment (such as the polyurea coating proposed for the Project);

3. Timing installation to avoid times when sensitive species might be present in the project vicinity (such as avoiding April through July when juvenile salmon might be moving from estuaries to the open ocean); and

4. Employing construction practices that avoid input of sawdust or other treated wood debris into the environment.
Models by NOAA fisheries have indicated that installation of 100 or less uncoated copper-treated piles at current velocities of 10 cm/sec or more are not likely to result in problematic water column concentrations. The Project only proposes to install up to 21 ACZA treated piles. Additionally, the piles would be wrapped in polyurea. Based on the analysis above, potential impacts would be less than significant. A comment from CDFW (Appendix G) received during the Draft IS/MND public circulation period stated that polyurea may become damaged by contact with boats or debris, allowing harmful substances to enter the water through the damaged coating; therefore, annual monitoring to assess the integrity of the polyurea coating and repair any damage that may have occurred has been included in MM HWQ-2 at the recommendation of CDFW. No new issues have occurred as a result of the comment and no additional mitigation is required.

*Impacts to Prey Species:* Impacts to prey species have the potential to cause indirect impacts to their predators through reduced quality or quantity of food supply. Metals leached into sediments near copper-treated wood in aquatic environments have been found to accumulate in benthic and epibenthic organisms (Weis and Weis 2004 as cited in NOAA, 2009). Fish can acquire elevated levels of copper indirectly through trophic transfer and may exhibit toxic effects if levels are high enough (Weis et al. 1998, Weis and Weis 2004, Eisler 2000 as cited in NOAA, 2009). However, effects decrease after the wood has leached a few months (Weis and Weis 2004 as cited in NOAA 2009). Weis and Weis (2004) determined that concentrations of copper in sediments near dock pilings, in moderately flushed areas, did not show accumulation of metals. The waters beneath the Wharf are highly flushed due to wave action. Therefore, indirect impacts to fish from trophic transfer are not anticipated.

Existing damaged piles provide vertical relief habitat for encrusting invertebrates that could provide food for fish species. Pile sleeving would remove invertebrates growing on the piles; however, anecdotal information from observation of other polyurea pilings suggest that they remain suitable for encrusting organisms, would be recolonized from the surrounding remaining pilings, and that no long-term effect to the Wharf biota would result from the replacements. Proposed use of fiberglass piles with HDPE sleeves would also support colonization as the surface is suitable for encrusting organisms. Indirect impacts to fish species from impacts to prey species would be temporary and less than significant.

*Marine Mammals:* Marine mammals protected under the Endangered Species Act (ESA) with a moderate to high likelihood of occurring in the Action Area include Southern sea otters (*Enhydra ultras nereis*). In addition to the marine mammals protected under the ESA, California sea lion (*Zalophus californianus*), harbor seals (*Phoca vitulina*), Northern elephant seals (*Mirounga angustirostris*), Northern fur seals (*Callorhinus ursinus*), harbor porpoises (*Phocoena phocoena*), common bottlenose (*Tursiops truncates*), and gray whales (*Eschrichtius robustus*) have a moderate to high potential of occurring in the Action Area and are protected under the Marine Mammal Protection Act (MMPA). Impacts to marine mammals from the proposed Project could occur due to noise and impacts to prey species, as discussed in detail below. Marine mammals would unlikely be affected by the minor localized turbidity increases and benthic sediment disturbances during pile driving.

*Noise:* Noise has the potential to directly impact marine mammals by causing physical injury or altering behavior when noise threshold levels are exceeded. Level A harassment is defined as “[A]ny act of pursuit,
torment, or annoyance which has the potential to injure a marine mammal or marine mammal stock in the wild.” Level B harassment is defined as “[A]ny act of pursuit, torment, or annoyance which has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including but not limited to migration, breathing, nursing, breeding, feeding or sheltering.” Currently, neither NOAA Fisheries nor USFWS have specific take criteria for harassment of sea otters, a federally listed threatened species. In the absence of noise thresholds specific to sea otters, USFWS has used the Level A 180 dB RMS threshold (updated Level A 202-232 dB RMS; NMFS 2018b found in Dudek 2020) and the Level B 160 dB RMS threshold for impulse noise; and Level B 120 dB RMS for continuous noise (URS Corporation 2013 found in Dudek 2020).

Pile driving would produce the loudest in-water noise. Twelve (12)-inch diameter timber piles would be installed using impact pile driving and/or 16-inch fiberglass piles would be installed using a vibratory hammer and impact proofing if required. In addition, hydraulic jetting may be used to decrease pile driving time and the number of impact blows required to drive piles. The Project could result in in-water noise levels exceeding the Level A in-water threshold within the immediate vicinity of the source (Dudek 2020). However, it would be extremely unlikely that marine mammals would occur within these small threshold areas. The largest threshold area is 21.9 meters for high frequency cetaceans. Due to the small Level A in-water threshold area, Level A impacts are not anticipated.

The in-water Level B threshold would exceed the behavioral threshold for up to 410 meters for the vibratory installation of fiberglass piles, 63 meters for potential timber pile impact driving, and up to 8.8 meters for proofing of fiberglass piles. Marine mammals would not be anticipated to occur within the immediate vicinity of the pile driving where noise impacts could conceivably be greatest. For this Project, the proposed exclusion zone (pile extraction shutdown area) includes all marine waters within the Level A and Level B zones as required under MM BIO-3. Implementation of MM BIO-3 would prevent all possible Level A or Level B harassment to marine mammals and ensure potential impacts are less than significant.

For in-air noise exposure of hauled-out pinnipeds, NMFS do-not-exceed disturbance criteria for Level B harassment of 90 dB re 20 μPa RMS for harbor seals and 100 dB re 20 μPa RMS for all other pinnipeds (NOAA 2011) was used to analyze potential impacts. The Level B harassment level for impact pile driving of timber piles would extend up to 11.4 meters for seals and 4.5 meters for sealions. The Level B harassment area could extend up to 30.3 meters for seals and 12.1 meters for sealions during impact proofing of fiberglass piles. Vibratory installation of fiberglass piles could result in shutdown zones of up to 7.1 meters for seals and 2.8 meters for sealions. There are no known harbor seal or sealion haulouts in the Action Area and therefore impacts to hauled out pinnipeds would not be anticipated. Furthermore, an exclusion zone would be applied to assure that impacts to pinnipeds does not occur. MM BIO-3 would require that an exclusion/shutdown zone be established and would be defined as the distance in which underwater sound levels exceed the Level B threshold for impact or continuous noise (Figure 5, Dudek 2020). These measures would avoid exposing marine mammals to sound levels in excess of the Level A or Level B criteria. In addition, mitigation measure MM BIO-2 would require that a wood
cushion block or comparable sound dampening device be used during impact pile driving. With the proposed mitigation measures, noise impacts would be anticipated to be less than significant.

**Impacts to Prey Species:** Impacts to prey species have the potential to cause indirect impacts to their predators through reduced quality or quantity of food supply. Metals leached into sediments near copper-treated wood in aquatic environments have been found to accumulate in benthic and epibenthic organisms. These metals can bioaccumulate up the food chain and cause toxic effects at higher trophic levels. Weis and Weis (2004) determined that concentrations of copper in sediments near dock pilings, in moderately flushed areas, did not show accumulation of metals. The sediments below the Wharf are well flushed and, therefore, trophic transfer of metals from ACZA treated piles would be anticipated to be less than significant. Furthermore, the ACZA piles would be coated in polyurea to inhibit ACZA from leaching from the piles.

**Special Status Bird Species:** Special status bird species with a moderate likelihood of occurring in the Action Area include marbled murrelet (*Brachyramphus marmoratus*), osprey (*Pandion haliaetus*) and brant (*Brant bernicla*). The osprey is ranked as a CDFW Watch List species and the ocean and lagoon habitat within the Action Area provide suitable foraging habitat for this species. Osprey are not anticipated to nest in the Action Area. The brant is a California species of special concern and the marine and estuarine habitat within and adjacent to the Action Area provide adequate wintering and foraging habitat for this species. In addition to the special status bird species that could occur in the Action Area, Monterey Bay is an important stop-over point for migratory birds and 94 species of native and non-native seabirds are known to occur regularly in Monterey Bay. Migratory birds are protected under the Migratory Bird Treaty Act (MBTA). Impacts to special-status bird species from the proposed Project could occur due to noise, water quality, and impacts to prey species, as discussed below in detail.

**Noise:** Noise from construction equipment and activities has the potential to disturb shorebirds, gulls, and other coastal birds that may forage or rest on beaches at or near the Wharf. This impact would not be substantially adverse and would remain less than significant because: (1) disturbance effects would be temporary and limited to the period of construction; (2) the unaffected shoreline adjacent to the repair activities site provides foraging opportunities; and (3) the foraging areas at the repair activities site would rapidly recover following the conclusion of construction. Noise from the proposed activities could disturb nesting birds. Therefore, mitigation measure MM BIO-4 would require that for construction conducted within the nesting bird season (e.g. February 15 – September 15), a pre-construction nesting bird survey would be conducted and avoidance provisions as necessary. Implementation of MM BIO-4 would ensure potential impacts are reduced to less than significant.

**Water Quality:** Decreased water quality has the potential to impact foraging birds. Pile driving may result in short-term temporary discharge of sediments into already turbid surface waters, which could cause a very minor increase in the water’s turbidity in the immediate vicinity on a temporary basis (Dudek 2020). Hydraulic jetting has the greatest potential to cause sediment disturbances among the three installation methods; however, in-water construction activities would occur within intertidal and shallow subtidal areas, which regularly experience turbidity from wave action on the sandy shoreline. In addition, Soquel Creek discharges high levels of turbidity adjacent to the Wharf. Therefore, potential turbidity elevations...
above baseline would be minimal. Increased turbidity could decrease foraging success in the immediate project vicinity; however, it is anticipated that there would be ample adjacent undisturbed foraging area for birds and impacts would be less than significant.

Impacts to Prey species: Impacts to prey species have the potential to cause indirect impacts to their predators through reduced quality or quantity of food supply. Metals leached into sediments near copper-treated wood in aquatic environments have been found to accumulate in benthic and epibenthic organisms. These metals can bioaccumulate up the food chain and cause toxic effects at higher trophic levels. Weis and Weis (2004) determined that concentrations of copper in sediments near dock pilings, in moderately flushed areas, did not show accumulation of metals. The sediments below the Wharf are well flushed and therefore trophic transfer of metals from ACZA treated piles would be anticipated to be less than significant. Furthermore, the ACZA piles would be coated in polyurea to inhibit ACZA from leaching from the piles.

Magnuson-Stevens Fishery Conservation and Management Act: The 1996 amendment to the Magnuson-Stevens Fishery Conservation and Management Act (MSA) created essential fish habitat (EFH) and required the identification and protection of important habitats for federally managed fisheries. The tidal aquatic habitats within the action area are considered EFH by NOAA. Fisheries for a species assemblage that includes sharks, rockfish, roundfish, and flatfish. There are three Fishery Management Plans (FMP) that include waters in and adjacent to the Action Area: the Coastal Pelagic FMP covering 5 species, the Pacific Groundfish FMP covering 9 species, and the Pacific Coast Salmon FMP covering 3 species. Fish species under these three plans are managed under the MSA. Consultation with NOAA Fisheries under the MSA would occur during the permitting process for the proposed Project.

Impacts to EFH and MSA managed species are typically determined based on whether a project reduces quality and/or quantity of EFH, regardless of the degree to which that impact occurs. The proposed Project would temporarily modify EFH at the Wharf, as well as localized portions of Monterey Bay surrounding the Action Area, but the effects would not result in permanent habitat loss or more than short-term displacement of MSA managed species and habitat. Impacts to MSA managed species from modification to benthic habitat, temporary water quality impacts, and noise impacts could occur, but would be anticipated to be less than significant. The Project would comply with any conservation measures required by NOAA fisheries to assure that less than significant impacts to MSA managed species occur.

With the implementation of required regulatory permit conditions and the proposed mitigation measures presented in this Section, impacts to candidate, sensitive, or special status species are anticipated to be less than significant. Additional mitigation is not required.
b) Would the Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations, or by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service?

**Less than significant impact with mitigation.** The City has an environmentally sensitive habitat (ESH) ordinance, which is intended to protect riparian habitat and monarch habitat from impacts due to development. The Project would occur on the existing Wharf deck and over Monterey Bay. The Wharf extends from Capitola Beach. Neither beach dune vegetation nor riparian habitat is present in the Action Area (Dudek 2020). Because the Project occurs overwater and over a managed beach, neither of which sustain assemblages of plant species, impacts to vegetation communities and riparian habitat is not anticipated. No impacts were identified and no mitigation is required.

The Project would occur at the existing Capitola Wharf, over Monterey Bay. Monterey Bay is part of the MBNMS, which was established and designated in 1992 for the purpose of resource protection, research, education, and public use and is the largest of the 13 marine sanctuaries administered by NOAA. The MBNMS is home to numerous mammals, seabirds, fishes, invertebrates, and algae in a remarkably productive coastal environment. In November of 2008, the Office of National Marine Sanctuaries released the final Monterey Bay National Marine Sanctuary Management Plan (Management Plan). Section II of the Management Plan addresses coastal development including reducing hard armoring, minimizing impacts from desalination activities, and ensuring protection of MBNMS resources during dredging and disposal activities. The proposed Project would not interfere with the goals of the MBNMS Management Plan as it does not propose armoring, desalination, dredging, or disposal.

The California Coastal Act is designed to encourage local governments to create Local Coastal Programs (LCPs) to govern decisions that determine short-term and long-term conservation and use of coastal resources. Capitola’s LCP includes policies pertaining to the protection of biological resources (City of Capitola 2013). With the minimization measures proposed in this Section (MM BIO-1, MM BIO-2, MM BIO-3, and MM BIO-4) the Project would not be anticipated to interfere with any of these policies. In addition, the City is required to prepare findings that any proposed development would meet all applicable land use policies before a permit can be issued for any development in the Coastal Zone.

Implementation of minimization measures presented in this Section (MM BIO-1, MM BIO-2, MM BIO-3, and MM BIO-4) would assure that the Project does not conflict with any local policies or ordinances that protect biological resources. Therefore, impacts are anticipated to be less than significant and no additional mitigation is required.

c) Would the Project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

**Less than significant impact.** Projects with impacts to Waters of the United States are regulated under Sections 404 and 401 of the Clean Water Act (CWA) through the USACE and the RWQCB, respectively. The Project would occur at the existing Wharf, over Monterey Bay. To determine the presence of a
wetland, three indicators are required: (1) hydrophytic vegetation, (2) hydric soils, and (3) wetland hydrology. Jurisdictional Waters of the United States are typically determined through the observation of an Ordinary High Water Mark (OHWM), which is defined as the “line on the shore established by the fluctuation of water and indicated by physical characteristics such as a clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas.” Waters of the United States must also be connected to adjacent watersheds. Jurisdictional Waters of the United States under the jurisdiction of the USACE and RWQCB occur in the Action Area.

Parts of the Action Area are characterized as intertidal sandy beach (wetland) and subtidal coastal wetland (Dudek 2020). The intertidal zone is located between the highest and lowest tide elevations. Within the Action Area, the intertidal is entirely sandy beach. Intertidal sandy beach communities are subject to daily tidal changes that result in highly fluctuating physical regimes in temperature, salinity, and moisture content of the sand. The intertidal can also be subject to high energy wave action. Subtidal coastal wetlands are located immediately seaward of intertidal sandy beach habitat and are constantly submerged. Subtidal coastal wetland habitat comprises the majority of the Action Area.

The coastal wetlands found in the Action Area are subject to the jurisdiction of the USACE and RWQCB under Section 404 and 401 of the Federal CWA. The Project is confined to the existing Wharf and 16 foot by 458-foot overwater expansion area. The Wharf expansion will occur over water and will be pile supported. Approximately 120, 16-inch piles are proposed as part of this expansion. Fiberglass piles would have HDPE sleeves to provide UV and battering protection. New piles would be fiberglass (composite) piles and could result in approximately 150 square feet of benthic disturbance within the intertidal and subtidal areas of the Action Area. Additionally:

- Twenty-one (21), 12-inch damaged timber piles could be replaced or repaired with fiberglass sleeves. If replaced piles would be ACZA treated polyurea coated or fiberglass.

- And 12, 14-inch steel piles could be repaired by either splicing on new steel pipe to the existing piles above the bay bottom, or by placing fiberglass jackets around these piles and grouting the inside. Sleeving would add approximately 2 inches to the diameter of the pile.

It is likely that the majority of the damaged timber piles would be repaired as opposed to replaced. However, in the event that all 21 of the damaged timber piles are replaced, the Project would permanently disturb up to 18 square feet of benthic sediment from pile repairs. The Project has been designed to use the smallest diameter feasible while still assuring the structural integrity of the Wharf. Furthermore, all new piles would be fiberglass. Fiberglass piles with HDPE sleeves are anticipated to be biologically favorable to treated wood piles. If treated wood piles are replaced, they would be replaced with fiberglass or ACZA treated wood coated in polyurea. Creosote treated wood piles are not proposed. The polyurea coating would be anticipated to inhibit leaching of ACZA. Weis and Weis (2004) determined that concentrations of copper in sediments near dock pilings, in moderately flushed areas, did not show
accumulation of metals. The sediments below the Wharf are well flushed and impacts would be anticipated to be less than significant.

Any benthic sediment disturbances to coastal wetlands are anticipated to be minor. Less than significant impacts to federally protected wetlands are anticipated and no mitigation is required.

d) Would the Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less than significant with mitigation. Wildlife corridors link together areas of suitable habitat that are otherwise separated by rugged terrain, changes in vegetation, or human disturbance. The Project would occur at the existing Wharf, over Monterey Bay. To the north of the Wharf the area is urbanized and consists of commercial, hotel, and residential uses. The Wharf extends from Capitola Beach, a public beach. The Wharf is pile supported and would not be anticipated to inhibit movement of aquatic species.

The greater Monterey Bay is an important stop-over point for migratory birds and 94 species of native and non-native seabirds are known to occur regularly in Monterey Bay. Along the continental shelf, the dominant species are sooty shearwaters (Ardenna grisea), western grebes, Pacific loon (Gavia pacifica), brown pelican, and western gulls. During summer to fall, species such as black-footed albatross (Phoebastria nigripes), ashy storm-petrel (Oceanodroma homochroa), and Scripp’s murrelet (Synthliboramphus scrippsi) can be found foraging over deeper waters of Monterey Bay (URS Corporation 2013). An important habitat associated with Monterey Bay is the waterbird foraging area off the shore below Depot Hill between the jetty and the mouth of Tannery Gulch, which is frequented by numerous bird species. The shoreline between the rock groin of Capitola Beach and the mouth of Tannery Gulch is frequented by numerous shorebirds during low tide such as sanderling (Calidris alba), willet (Tringa semipalmata) and black turnstone (Arenaria melanocephala). Many other waterbirds, including cormorants, gulls and the delisted California Brown Pelican, commonly forage immediately offshore in the waters adjacent to the kelp beds.

Noise from construction equipment and activities has the potential to disturb shorebirds, gulls, and other coastal birds that may forage or rest on beaches at or near the Wharf. This impact would not be substantially adverse and would remain less than significant because: (1) disturbance effects would be temporary and limited to the period of construction; (2) unaffected shoreline adjacent to the repair activities site provides foraging opportunities; and (3) the foraging areas at the repair activities site would rapidly recover following the conclusion of construction. Noise from the proposed activities could disturb nesting birds. Therefore, MM BIO-4 would require that for construction conducted within the nesting bird season (e.g. February 15 – September 15), a pre-construction nesting bird survey will be conducted.

Project activities could also impact the movement of fish due to noise and turbidity. Noise would not be anticipated to cause physical injury of fish species but could alter their behavior and cause them to avoid the construction area. Increased turbidity in the water column could also impact fish behavior; however,
mitigation measure **MM HWQ-1** discussed above would require the Project to implement BMPs and permit conditions required by the regulatory agencies in order to protect water quality. Implementation of BMPs and permit conditions would ensure potential impacts are less than significant.

Impacts to the movement of fish or wildlife are anticipated to be less than significant and no additional mitigation is required.

e) **Would the Project conflict with any local policies or ordinance protecting biological resources, such as a tree preservation policy or ordinance?**

**Less than significant impact.** The Project is located within the coastal zone, which can be considered an Environmentally Sensitive Habitat Area (ESHA) under Section 17.64.020 of the City’s Zoning Code and with its applicability to the City’s LCP and the requirements of the Coastal Act. Based on Project location, compliance with the City’s LCP would be required. The CCC retains coastal permitting jurisdiction over any development located at or below the mean high tide line and is thereby responsible for issuing the Coastal Development Permit (CDP) for the entirety of the proposed Project. Compliance with the LCP and required regulatory permits would ensure that potential impacts to ESHA would be less than significant.

f) **Would the Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?**

**No impact.** The City of Santa Cruz Habitat Conservation Plan (HCP) is currently being developed. The final document has not been released or adopted. The HCP is anticipated to be finalized in 2020. The Project would comply with all federal, state, and local regulations. Impacts are not anticipated and no mitigation is required.

**Cumulative Impacts**

**Less than significant impact.** Less than significant impacts are anticipated from the Project. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant impact on biological resources within the MBNMS in consideration of the proposed Project. Project impacts are anticipated to be less than significant and no additional mitigation is required.

**Avoidance, Minimization and/or Mitigation Measures**

The following mitigation measures would be implemented to avoid and/or minimize potential impacts and to ensure impacts are less than significant:

**MM BIO-1** A biologist shall lead on-site environmental training for work crews prior to the start of the proposed Project. Any new crew members brought onto the job prior to Project commencement must undergo the environmental training before starting work on the Project. Pre-construction training shall involve discussion on the status and sensitivity of the target species in the area and the actions to be
taken to avoid or minimize impacts in the event of a target species entering the work area. This measure shall be included on the construction plans.

**MM BIO-2** The contractor shall use a wood cushion block, or other comparable noise dampening device, during pile driving activities. This measure shall be included on the construction plans.

**MM BIO-3** A pile installation “exclusion zone” defined as the distance where underwater and in-air sound levels exceed the Level B harassment threshold (160 dB RMS threshold for impulse noise; and 120 dB RMS for continuous noise) shall be established. The exclusion zone distance(s) shall be from the active pile driving/installation source as detailed below or an alternative distance(s) if required by the Project’s regulatory permits. Exclusion zones by pile type and installation method are as follows:

Marine mammal monitoring of the exclusion zone shall be conducted prior to commencement of pile installation. Pile-installation activities shall not commence until marine mammals are not sighted in the exclusion zone for 15 minutes. This measure shall be included on the construction plans.

**MM BIO-4** If Project construction begins outside of nesting bird season, no additional mitigation is required. If Project construction begins within the nesting bird season (e.g. February 15 – September 15), a pre-construction nesting bird surveys shall be conducted. No more than 7 days one week prior to initiation of construction activities OR within 14 days after start of nesting bird season if construction activities have already commenced, a qualified biologist with at least 5 years of experience conducting nesting bird surveys shall conduct a nesting bird survey out to 500 feet from construction to determine if active nests of bird species protected by the Migratory Bird Treaty Act, Endangered Species Act, and/or the California Fish and Game Code are present. In addition, periodic surveys for active nests shall be conducted within this same area every 14 days during Project construction within the nesting season. The extent of the survey monitoring area is shown on Figure 5 in the nesting bird monitoring area shown on Figure 4. If active nests are found, construction activities within 300 feet of the nests of MBTA protected species and within 500 feet from nests of ESA-listed species and raptors (or other sufficient distance pending field conditions as determined by the qualified biologist) shall be modified, postponed or halted, until the nest is vacated, the young have fledged, and/or there is no evidence of a second attempt at nesting. Alternatively, the biological monitor shall establish a behavioral baseline of all identified active nests and continuously monitor the nests during active construction for signs of Project-related behavioral changes. If behavioral changes are not observed, work may proceed. If behavioral changes are observed, work shall be halted or postponed until modifications demonstrate to the
biologist’s satisfaction that Project-related activities are no longer causing behavioral changes. Monitoring shall not extend beyond Cliff Drive because the effects and noise environment beyond that location is dominated by roadway and train effects.

3.5 Cultural Resources

a) Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

Less than significant with mitigation. The Wharf was individually listed by the City on its 2005 Historic Structures List, and identified as individually eligible for the California Register under Criterion (1) and the National Register under Criterion (A) in an updated Department of Parks and Recreation (DPR) evaluation prepared in 2019 (Dill 2019a). The City engaged in early coordination with a licensed and registered architectural historian, Leslie Dill, to evaluate and minimize the Project’s potential impacts to the Wharf and Capitola Beach Cultural Landscape District. A memorandum was prepared by Leslie Dill, dated June 6, 2019, providing initial Secretary of the Interior’s review of potential materials proposed for repairs at the Capitola Wharf (Dill 2019b). The memorandum determined that additional material and design information would be needed to determine potential impacts on the character defining features identified in the DPR. On March 12, 2020 additional material and design information for the proposed Project was submitted to Leslie Dill for supplemental review. Leslie Dill then completed an updated Secretary of the Interior’s Standards and Historic Integrity Review in April 2020 (Dill 2020, Appendix D), which includes the full evaluation of coordination, submittals and reviews described above. The findings and recommendations of the Secretary of the Interior’s Standards and Historic Integrity Review are summarized below.

Since the Wharf’s original construction in 1857 it has been rebuilt several times (Dill 2019a). The Wharf was extended in 1863, reduced in size in 1865, repaired in 1909, a clubhouse was built in 1928 which burned in 1940, widened and repaired from 1955-56, buildings were added in 1982, and various other repairs and renovations occurred in: 1924, 1936, 1965, 1981, and 1999-2000. In 1981 major maintenance was required that nearly replaced the entire structure. Although it has been rebuilt many times, the Wharf...
still serves as a visual, functional, and recognizable part of Capitola Beach. The Wharf was previously listed on the Historic Structures List by the City as an individually significant structure in 2005.

Per the DPR, the character-defining features of the Wharf are as follows, based on current conditions and historic photographs:

1. Its location and orientation, including its direct connection to the end of Wharf Road;
2. Its visually abundant round wooden piles, some in a regular pattern and some irregular;
3. Its continuous-height wood-plank deck, at the height of the end of Wharf Road;
4. Its narrower entrance width and wider end (altered to this design in the 1950s); and
5. The inclusion of hoists and other technical boating and fishing equipment.

The proposed Project would have no impact on character defining features 1, 3, or 5. Impacts to character defining features 2 and 4 would be less than significant, as further discussed below.

Although altered and rebuilt multiple times after years of exposure to wave and tidal damage, the Wharf retains much of its historic integrity per the National Register's seven aspects of integrity and continues to serve as a visual, functional, and recognizable part of Capitola Beach. Because long-term weathering and storm damage have prompted repair and replacement of the Wharf's piers and decking multiple times, its materials and workmanship are not readily identifiable as historic; however, the structure continues to be built of timber and display round-wood pilings related to the structural design of the past. The Wharf has historical integrity with its location and setting at Capitola Beach and extending into Monterey Bay. It retains visual associations with the establishment of shipping in the Early American era and commercial and recreational fishing for over a century, and it conveys a feeling of its age and continued use over time. Per the California Register definition of integrity, the Wharf conveys adequate historic authenticity. It serves to preserve the relationship of the beach to the commercial shipping and fishing industries of Capitola’s past.

Due to necessary maintenance and repair over the years, the Wharf structure is not identifiable as historic, but is still a prominent landmark in Capitola and contributor to Capitola Beach. The Wharf conveys adequate historic authenticity with its location and setting at Capitola Beach and extending into Monterey Bay. Because the Wharf contributes to Capitola Beach Cultural Landscape District, it is eligible for the California Register under Criterion (1) and the National Register under Criterion (A). The proposed Project would not alter the setting or location of the Wharf and is, therefore, not anticipated to interfere with its eligibility under criteria (1) or (A) of the California or National Register, respectively. No impacts are anticipated, and no mitigation is required.

The Wharf's heavily altered structure no longer has integrity with the original materials or design, and it does not have association with other significant personages that meet criteria (2) or (B) of the California or National Register, respectively. The heavily altered structure does not meet the Design/Construction criteria for design qualities or artisanship and does not meet criteria (3) or (C) for the California or National Registers, respectively. Because the Wharf's structure does not meet Criteria (2) or (3) of the
California register or (B) or (C) of the National Register, the proposed Project would not be anticipated to have a significant impact on cultural resources.

As previously mentioned, an Interior’s Standards and Historic Integrity Review was completed in April 2020 (Dill 2020, Appendix D). This review concluded that the Wharf has “been repaired and altered many times with matching replacement materials. The durability of these historical materials over time in the face of the Pacific Ocean is not consistent with the value of the structure to the community, so alternative replacement materials are worth consideration.” To the extent feasible, replacement materials would be similar to historical materials (Appendix A). The use of treated wood piles can cause an array of biological issues due to the leaching of chemical treatments (ACZA or creosote). Therefore, it is not favorable to install treated wood piles and in-kind replacement of creosote treated timber piles is not allowed by the regulatory agencies. Available pile types that are agency approved and have been used more recently for pile additions and replacements include HDPE (as used on the expansion of the trestle near the Wharf foot in 2002) piles and ACZA timber piles with a polyurea coating.

The Project proposes 120, new 15-inch fiberglass piles with HDPE covers to provide UV and battering protection. Additionally up to 21 existing 12-inch creosote treated wood piles would be replaced with ACZA treated polyurea coated piles or fiberglass piles with HDPE sleeves. The use of fiberglass piles with HDPE covers and widening of the trestle would be anticipated to improve the resiliency of the structure and minimize future maintenance needs. Replacement piles would be similar in dimension and cross-section shape. Polyurea coated piles would be black/brown and fiberglass piles with HDPE covers would be black. The texture of ACZA treated polyurea coated piles or fiberglass piles with HDPE covers would be slightly different to that of the historic creosote treated wood piles. However both proposed pile types would likely be repopulated by barnacles similar to the historic wood piles, which would help disguise any textural differences. Additionally, the use of fiberglass piles with HDPE covers would be similar to the 2002 expansion of the Wharf foot. The replacement materials are proposed to be similar in dimension, layout, and color of the historic pier, especially as viewed from afar. Differences would be more discernable when viewed at closer distances from underneath the Wharf standing on the beach. Based on the Interior’s Standards and Historic Integrity Review, the new pile materials would result in “a loss of integrity of materials, but it is proposed to be minimized in this Project (Dill 2020).” In order to ensure potential impacts remain less than significant, mitigation measure **MM CUL-1** would require the City’s Architectural & Site Review Committee to verify the Project’s 100% design plans are consistent with the recommendations provided in the Interior’s Standards and Historic Integrity Review prior to approval. Implementation of **MM CUL-1** would ensure potential impacts to character defining feature 2 would be minimized to less than significant.

---

2 Existing damaged piles designated for "replacement" are to be protected in-place with the new pile installed next to the damaged pile; however, in some cases the contractor may need to remove the existing pile should field conditions impede installation of the new pile. The preference is to protect damaged piles in-place to reduce construction work and retain any structural support of the existing pile.
Although the Project would widen the Wharf trestle, the entrance would still remain narrower than the Wharf head. The Interior’s Standards and Historic Integrity Review determined that “the added width would continue to allow a perception of light and air from underneath the structure; views would persist to the water and to the sides. The changes can be found compatible with the character of the historic wharf (Dill 2020, Appendix D).” Based on this evaluation, potential impacts to character defining feature 4 would be less than significant.

In summary, the Interior’s Standards and Historic Integrity Review concluded the Project, “as currently presented, is substantially compatible with the Secretary of the Interior’s Standards for the Treatment of Historic Properties. The project can be found to preserve substantially the historic integrity of the historic resource and of the identified Capitola Beach Cultural Landscape District (Dill 2020, Appendix D).” Consistent with the recommendations made in the Interior’s Standards and Historic Integrity Review and to ensure the Project remains consistent with this finding as it is carried forward to the final design stage, mitigation measure MM CUL-1 would require the City’s Architectural & Site Review Committee to verify the Project’s 100% design plans are consistent with the recommendations provided in the Interior’s Standards and Historic Integrity Review prior to approval. Implementation of MM CUL-1 would ensure the Project’s potential impacts remain less than significant.

b) Would the Project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

No impact. The Project only proposes structural enhancements and public access improvements at the existing Wharf. There would be no major excavation that could disturb archaeological resources. Sediment disturbance would be limited to pile sleeving and pile driving. Pile sleeving may require a diver to use a handheld shovel and dig directly around the pile to approximately 1 foot deep to allow for placement of the sleeve (to be determined by the contractor based on field conditions). Sediments located at these shallow depths are in constant flux due to the high-energy wave environment; so archaeological resources would not be anticipated to occur. In July of 2018 the City of Capitola prepared a Cultural Resources Assessment (Appendix D) for a separate project that partially included the Project footprint along the beach near the foot of the Wharf. The Cultural Resource Assessment did not identify any known or recorded cultural resources at or immediately adjacent to the proposed Project area of ground disturbance (Appendix D). Due to the nature of the Project and based on other research performed in the area, it is very unlikely that archaeological resources would be encountered. No impacts are anticipated and no mitigation is required.

c) Would the Project disturb any human remains, including those interred outside of formal cemeteries?

No impact. No human remains are known to exist at the Project site and no substantial excavations are proposed. Sediment disturbance would be limited to pile sleeving and pile driving as described above in Section 3.5.b). No impacts are anticipated; however, should human remains be discovered during ground disturbance, the Project Applicant/Developer would be required to follow all standard protocols and regulations required of any project that uncovers human remains. To comply with State Health and Safety Code Section 7050.5, if human remains are encountered, the County Coroner must be notified of the
find immediately. No further disturbance would occur until the County Coroner has made a
determination of origin and disposition pursuant to Public Resources Code (PRC) Section 5097.98. If the
remains are determined to be Native American, the Coroner would notify the Native American Heritage
Commission (NAHC), which would determine and notify a Most Likely Descendant (MLD). The MLD
may recommend scientific removal and nondestructive analysis of human remains and items associated
with Native American burials.

Cumulative Impacts

No impact. The Project is not anticipated to affect the cultural or historical integrity of the Wharf or the
potential Capitola Beach Cultural Landscape District. No other projects have been identified associated
with the Wharf or surrounding area that could cumulatively contribute to a significant cultural resource
impact in consideration of the proposed Project. No cumulative impacts are anticipated and no mitigation
is required.

Avoidance, Minimization and/or Mitigation Measures

The following mitigation measures would be implemented to avoid and/or minimize potential impacts
and to ensure impacts are less than significant:

MM CUL-1 Prior to City approval of the Project’s final 100% design plans, the City’s Architectural &
Site Review Committee shall perform a focused review of the draft 100% design plans for consistency
with the design plans reviewed and recommendations provided in the Project’s April 2020 (or as
amended) Secretary of the Interior’s Standards and Historic Integrity Review. The City’s focused review
shall evaluate consistency with the following elements:

a. Compatible texture and finish of proposed exterior of the new piles and repaired piles;
b. Compatible design, scale, materials, location, etc., of the prefabricated restrooms;
c. Design, scale, materials, etc., of the altered entrance gates; and

d. Design, scale, materials, etc., of the new security gates.

Should the focused review determine the above listed elements in the draft 100% design plans are
consistent with the design plans reviewed and recommendations provided in the Secretary of the
Interior’s Standards and Historic Integrity Review, no additional mitigation shall be required. Should an
inconsistency be identified, modifications to the draft 100% design plans shall be made until the
Architectural & Site Review Committee determines consistency has been met.

Standard Review (Dill 2019b); Proposed Rehabilitation and Repair Project, Capitola Wharf, Capitola, CA
Secretary of the Interior’s Standards and Historic Integrity Review (Dill 2020).
3.6 Energy

a) Would the Project result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

*Less than significant impact.* The Project proposes structural enhancements and facility improvements at the existing Wharf that are necessary for improved resiliency, safety, and public access. The Project proposes lighting improvements along the Wharf and lighting in the new restrooms. The proposed lighting additions would slightly increase energy use during long-term operations, but this increase is not anticipated to be wasteful or inefficient as increased demand would be negligible and fixtures would be consistent with building code efficiency standards and requirements. Long-term Project operation is not anticipated to result in the wasteful, inefficient, or unnecessary consumption of energy resources.

Temporary increases in energy use would occur during Project construction. Project construction could occur for 9 months and would require the use of impact pile drivers, vibratory pile drivers/extractors, hydraulic jets for pile driving, pneumatic tools, power tools, hand tools, cranes, a small boat, and a diver as needed. Construction equipment would require consumption of energy resources including fossil fuels and electricity. This equipment is typical of equipment used for normal maintenance and repair of the Wharf. Use of such equipment is not anticipated to be wasteful, inefficient, or unnecessary and would not result in a potentially significant environmental impact. Less than significant impacts are anticipated and no mitigation is required.

b) Would the Project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

*No impact.* New developments in the City are encouraged to use energy-efficient design features (City of Capitola 2019) and Title 24 of the State Building Standard Code requires energy conservation and efficiency measures for any new structures, additions to existing structures, changes to footprint of structures, or changes to water and heating systems (City of Capitola 2013). On July 17, 2008 the
California Green Building Standards Code (Title 24, Part 11) was adopted. This code established planning and design standards for sustainable developments.

The Project only proposes structural enhancements and public access improvements at the existing Wharf. The Project proposes to widen the trestle by 16 feet to a total width of 36 feet, increasing the Project footprint by a total of 7,400 square feet. No habitable buildings will be constructed. The Project proposes to construct two approximately 10-by-20-foot restrooms, one of which would replace the existing restroom behind the Capitola Wharf House restaurant. The restrooms would be constructed in compliance with the mandatory provisions of Title 24 of the State Building Standard Code’s efficiency standards and requirements. Any increased long-term demand for electricity or hot water would be negligible. Impacts are not anticipated and no mitigation is required.

**Cumulative Impacts**

*Less than significant impact.* The Project would result in temporary elevations in energy usage during construction and slightly elevated energy usage over the long-term due to additional lighting needs. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant environmental impact due to unnecessary or wasteful energy use or conflict with a state or local energy plan. Project impacts would be less than significant and no mitigation is required.

**Avoidance, Minimization and/or Mitigation Measures**

No significant impacts were identified, and no mitigation measures are required.

f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

- [ ]
3.7 Geology and Soils

a) Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

No impact. Capitola is a seismically active area, but there are no known active faults within the City boundaries. The three faults with the most seismic influence in the City are the San Andreas Fault, Palo Colorado-San Gregorio Fault, and Zayante Fault (City of Capitola 2019). The Zayante Fault is approximately 5 miles northeast of the Wharf at its closest point, the Palo Colorado-San Gregorio Fault is approximately 14 miles southwest of the Wharf at its closest point, and the San Andreas Fault is approximately 9 miles northeast of the Wharf at its closest point (City of Capitola 2013). These three faults are considered active and have been delineated under the Alquist-Priolo Earthquake Fault Zoning Map (California Department of Conservation EQ Zapp 2019). According to the Alquist-Priolo Earthquake Fault Zoning Map, the delineated portion of the Zayante Fault is approximately 8.5 miles east of the Wharf at its closest point as opposed to 5 miles northeast as described in the 2019 update of the Capitola General Plan. The Project only proposes structural enhancements and public access improvements to the existing Wharf. The Project proposes to build a new additional restroom at the foot of the Wharf and replace and relocate the existing restroom at the head of the Wharf. The Project also proposes to expand the existing trestle of the Wharf by 16 feet. No other structures are proposed. The new restrooms would be constructed on the existing Wharf deck, one of which would replace the existing restroom at the head of the Wharf. There is no proposed increase in use of the Wharf that could pose additional risk of injury or death during an earthquake and there are no known active faults within the City boundaries. Impacts are anticipated to be less than significant and no mitigation is required.

ii) Strong seismic ground shaking?

Less than significant impact. The possibility of damage due to ground shaking is considered very low since active faults are not known to cross the site or occur within the City limits (City of Capitola 2019). The nearest known active regional fault according to the City of Capitola General Plan Update is the Zayante Fault, located approximately 5 miles northeast of the site. In addition, Wharf improvements are anticipated to improve the structural integrity of the Wharf and will be consistent with current building standards, including those related to seismic considerations. There is no proposed increase in use of the Wharf that could pose additional risk of injury or death during an earthquake. Potential impacts are considered less than significant and no mitigation is required.

iii) Seismic-related ground failure, including liquefaction?

Less than significant impact. Liquefaction is a ground failure hazard that typically occurs during seismic events in areas where loose sandy soils exist below shallow groundwater. The Project occurs over water
with piles driven into the ocean floor for structural stability, consistent with the existing Wharf and other typical wharf structures. The liquefaction potential in the immediate area of the proposed Project has not been defined. Adjacent soils to the northeast of the Wharf have been defined as having a very high liquefaction potential (City of Capitola 2019). Adjacent soils to the northwest of the Wharf have been defined as having a low liquefaction potential. The Project proposes to build two new restrooms and expand the existing trestle of the Wharf, but no other structures are proposed. Expansion of the Wharf would improve the structural integrity of the Wharf. There is no proposed increase in use of the Wharf that could pose additional risk of liquefaction. Potential impacts are considered less than significant, and no mitigation is required.

iv) Landslides?

**No impact.** The Project site is located in Monterey Bay at the existing Wharf. The Project proposes to build two new restrooms and expand the existing trestle of the Wharf to improve the Wharf’s structural integrity. There are no onsite or adjacent hills. The City is generally characterized as flat (City of Capitola 2019). Given the absence of steep slopes adjacent to the Project site, landslides are unlikely; no impacts are anticipated and no mitigation is required.

b) Would the Project result in substantial soil erosion or the loss of topsoil?

**No impact.** The Project site and surrounding area is relatively flat with characteristics that are not indicative of erosive conditions. The Project is confined to the existing Wharf and 16-foot by 458-foot overwater expansion area. No upland work would occur that could result in the loss of topsoil or soil erosion. The Wharf expansion would occur over water and will be pile supported. Impacts are not anticipated, and no mitigation is required.

c) Would the Project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in, on or offsite landslide, lateral spreading, subsidence, liquefaction or collapse?

**Less than significant impact.** The Project site is on a relatively flat beach and extends over Monterey Bay. The greater Project vicinity is characterized by generally flat areas (City of Capitola 2019). There are no adjacent hillsides to the Project site. Areas immediately to the northeast of the Wharf are identified as areas of high liquefaction potential (City of Capitola 2019), but these are sufficiently far from the Project site. The Project does not propose development of new structures susceptible to substantial increased risk of liquefaction. Widening of the Wharf trestle would provide additional structural integrity. The Project does not propose activities such as excavation work that could result in unstable soils. New piles would be driven to a depth that would assure structural integrity of the Wharf. In addition, damaged and/or deteriorated piles that may not be providing optimal support would be replaced with new piles. Less than significant impacts are anticipated, and no mitigation is required.
d) Would the Project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks of life or property?

**No impact.** Expansive soils are characteristically clay soils that are prone to large volume changes (swelling and shrinking) that are directly related to changes in water content. Expansive soils can cause damage to structures that are built on them due to shrinking and swelling events. In general, the soils in Capitola consist of loam and sandy loam soils (City of Capitola 2013). These soil types are characterized as well-drained alluvial soils with low permeability and would be anticipated to have a low shrink swell potential. Therefore, impacts are not anticipated, and no mitigation is required.

e) Would the Project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

**No impact.** The Project proposes to construct two new restrooms, one of which would replace the existing restroom at the head of the Wharf. Both restrooms would connect to the existing sewer system. The sewer line would be relocated from below deck to above deck to provide protection from waves. Wastewater disposal systems or septic tanks are not proposed. Impacts are not anticipated and no mitigation is required.

f) Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

**No Impact.** Paleontological resources are remains of prehistoric animals and plants that are at least 11,000 years old. The City of Capitola General Plan Update EIR, identifies the coastal zone within Capitola as having potential for containing paleontological resources (City of Capitola 2013). Most of the paleontological resources are anticipated to be found in Purisima formation along the bluffs of Capitola. The Project does not occur on a bluff and does not propose any excavation within coastal bluffs or any other areas of the Project site. The proposed Project occurs on the existing Wharf and a 16-by-458-foot expansion area over Monterey Bay. To support the expansion area, approximately 120, 16-inch piles would be driven adjacent to the existing Wharf, but there would be no excavation of sediments that could disturb paleontological resources. Impacts to paleontological resources are not anticipated and no mitigation is required.

**Cumulative Impacts**

**Less than significant impact.** Less than significant impacts are anticipated from the Project. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant geological impact in consideration of the proposed Project. No impacts are anticipated, and no mitigation is required.

**Avoidance, Minimization and/or Mitigation Measures**

No significant impacts were identified and no mitigation measures are required.

3.8 Greenhouse Gas Emissions

a) Would the Project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less than significant impact. Construction activities would result in minor generation of greenhouse gas (GHG) emissions from the combustions of diesel fuel. GHG emissions would occur from direct sources such as the use of construction equipment, worker commute trips, and haul truck trips. The MBUAPCD has not adopted its own GHG emission significance thresholds. Therefore, Bay Area Air Quality Management District (BAAQMD) GHG thresholds were used to analyze the significance of Project related GHG emissions. GHG emission rates were calculated using the CARB 2017 off-road model and anticipated equipment use (Appendix C). Anticipated Project GHG emissions are presented in Table 2.

¹ No increase in use or construction of structures that could measurably increase GHG emissions compared to existing baseline conditions. Therefore, operational emissions are not anticipated.
² Total annual GHG emissions are the sum of 9-month construction emissions.
Source: 2017 CARB off-road model

Table 2 shows that Project construction would result in an incremental increase in GHG emissions of 287 metric tons per year (mty), over 9 months of construction within one year. The MBUAPCD or BAAQMD does not state a significance threshold for construction related GHG emissions; however, the
construction related GHG emissions described above are anticipated to be minor and less than significant compared to BAAQMD’s threshold. No mitigation is required. The analysis is conservative as it assumes three pieces of 250 hp equipment running 10 hours per day and assumes older (40 years) higher-polluting equipment. It is more likely that newer equipment would be used, run times would be shorter, and engines would be smaller, resulting in less than 287 mty of emissions.

Significant operational GHG emissions are not anticipated as the Wharf would continue to operate the same as existing conditions once construction is complete. There is no substantial increase in use or change in land use proposed. The Project only proposes structural enhancements and public access improvements at the existing Wharf. The Project proposes the construction of two restrooms, one of which would replace the existing restroom at the head of the Wharf. The restrooms would require a nominal amount of electricity for night use, but associated emissions would be negligible. No other structures are proposed that could result in operational GHG emissions. Operational GHG emission are anticipated to be negligible and impacts are not anticipated.

b) Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

No impact. The Governor’s Executive Order S-3-05 (EO S-3-05) established GHG emission reduction targets for the state as follows: by 2010, reduce GHG emissions to 2000 levels; by 2020, reduce GHG emissions to 1990 levels; and by 2050, reduce GHG emissions to 80 percent below 1990 levels. In response to this Executive Order, California adopted Assembly Bill 32 (AB 32), which codified EO S-3-05 goals as statewide targets and instructed CARB to adopt regulations that reduce emissions from significant sources of GHGs and establish a mandatory GHG reporting and verification program. In 2008 CARB developed the AB 32 Scoping Plan, which laid out a suite of measures to reduce GHG emissions to 1990 levels by 2020. In 2014 CARB developed the 1st Update to the AB 32 Scoping Plan, which highlighted California’s progress toward meeting the near-term 2020 GHG emission reduction goals, highlighted the latest climate change science and provided direction on how to achieve long-term emission reduction goals described in EO S-3-05.

In 2015, the Governor issued Executive Order B-30-15 (EO B-30-15) establishing a mid-term GHG reduction target for California of 40 percent below 1990 levels by 2030. In response to this Executive Order, California adopted Senate Bill (SB) 32, which codified EO B-30-15 goals as a statewide target and instructed CARB to adopt regulations to meet the target. The CARB is moving forward with a second update to the Scoping Plan to reflect the 2030 target set by EO B-30-15 and codified by SB 32.

AB 32 and SB 32 codified state targets and directed State regulatory agencies to develop rules and regulations to meet the targets; AB 32 and SB 32 do not stipulate project-specific requirements. Specific requirements are codified in rules and regulations developed by regulatory agencies such as CARB and MBUAPCD, and local City actions such as the City of Capitola draft Climate Action Plan (CAP). The CAP 2035 GHG reduction target is to reduce GHG emissions by 42.9 percent below Capitola’s 2010 baseline GHG emissions. To meet these goals the CAP identifies six overall sectors/measures in which reduction methods will be focused:
1.) Vehicle Miles Traveled (VMT) and transportation  
2.) Residential and non-residential energy  
3.) Water and wastewater  
4.) Solid waste  
5.) Parks, open space, and agriculture  
6.) Action and implementation

AB 32 Scoping Plan and Scoping Plan Update strategies include, but are not limited to the renewables portfolio standard, the low carbon fuel standard, mobiles source measures (vehicle efficiency measures, zero vehicle emission technologies), solar roof programs, carbon sequestration systems, etc. CARB and MBUAPCD develop regulations based on these strategies, which are enforced at the state level on utility providers and automobile manufacturers.

As described above, minor GHG emissions would be generated during Project construction and Project operations would continue similar to existing conditions post-construction. Construction of the proposed Project would comply with CARB and BAAQMD requirements. The proposed Project would comply with existing regulations and would, by law, comply with future regulatory requirements. The proposed Project would, therefore, not preclude the State’s implementation of the AB 32 Scoping Plan or Plan Update. In addition, the proposed Project would not conflict with the City of Capitola CAP. The Project would comply with all applicable GHG emission reduction measures proposed in the CAP such as recycling at least 50 percent of non-hazardous construction debris and sourcing construction materials locally when feasible. The Project would not conflict with any plans, policies, or regulations adopted to reduce GHG emissions. No impacts are anticipated and no mitigation is required.

**Cumulative Impacts**

*Less than significant impact.* Less than significant impacts are anticipated from the Project. The Project would generate negligible GHG emissions during construction but would not result in significant GHG emissions or conflict with existing plans, policies, or regulations. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant GHG emission impact in consideration of the proposed Project. Less than significant impacts are anticipated and no mitigation is required.

**Avoidance, Minimization and/or Mitigation Measures**

No significant impacts were identified, and no mitigation measures are required.

**Sources**

#### 3.9 Hazards and Hazardous Materials

a) *Would the Project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*

**Less than significant impact.** The Project does not propose the routine transport of hazardous materials. Old damaged creosote treated piles will be removed from the marine environment and disposed of at an appropriate upland facility as part of this Project. No new creosote treated piles will be introduced into the environment. All new and replacement piles will be composite (fiberglass) piles or ACZA treated and polyurea coated or composite (fiberglass) piles. New or replacement piles will not be creosote treated.
ACZA contains copper oxide, zinc oxide, and arsenic pentoxide. It is used to prevent wood decay and is generally preferred over creosote. Because ACZA can be toxic to the environment, the City proposes to coat all treated piles in polyurea. Polyurea is designed to fully encapsulate treated timber products by creating a mechanical monolithic bond to the treated timber pile. Polyurea is applied at the treating facility and allowed to completely integrate into the woods surface. Studies have verified that polyurea successfully inhibits the leaching of ACZA components from timber piles (Konkler and Morrell 2016).

The Project proposed no change to existing functions or operations of the Wharf. Deterioration and/or damage of piles installed as part of this Project may require pile replacement in the future. In the case that pile replacement is required, composite piles or otherwise non-toxic piles will be used as approved by the agencies (USACE, California Coastal Commission, and RWQCB). Replacement piles will not be creosote treated. Impacts from the transport, use, or disposal of hazardous wastes are anticipated to be less than significant and no mitigation is required.

b) Would the Project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

No impacts. The Project proposes structural enhancements and public access improvements to an existing Wharf. The Project occurs at a public beach and over Monterey Bay. Little potential exists for encountering hazardous materials or hazardous waste within the Project site.

The Project would result in temporary transport, use and disposal of hazardous materials and debris generated during Project construction such as creosote piles, petroleum-based fuels, lubricants, and other similar materials. The potential risk associated with accidental discharge during use and storage of equipment-related hazardous materials would be low since the handling of such materials would be addressed through the implementation of regulatory permit BMPs and requirements. In addition, all transport, handling, use, and disposal of substances such as petroleum products, paints, and solvents related to the operation and maintenance of the Project would comply with all Federal, State, and local laws regulating management and use of hazardous materials. With the implementation of BMPs and standard regulations, potential impacts would be less than significant and no mitigation is required.

A review of the State Water Resources Control Board’s Leaking Underground Storage Tank (LUST) GeoTracker database and Department of Toxic Substances Control (DTSC) EnviroStor noted the following sites within a half mile of the Project:

- The two nearest LUST cleanup sites are approximately 0.35 miles north of the Wharf (SWRCB 2019). One site was a former Capitola pumping station and one was the Capitola Mall Brown Bulb Ranch. The potential media of concern is soil at both sites. The potential contaminant of concern is diesel at both sites. Clean ups have been marked as ‘completed, case closed’ for both sites as of 1988.
The nearest active cleanup site is approximately 2.3 miles northwest of the Wharf. The potential media of concern at this site is groundwater and soil. The potential containment of concern is gasoline.

According to the EnviroStor database the nearest DTSC cleanup site is approximately 0.3 miles west of the Wharf at Opal Cliffs School. The potential media of concern is soil. Potential contaminants of concern include lead and organochlorine pesticides. The cleanup status is marked as ‘No further action as of 6/4/2009.’

The nearest cleanup program site is Noble Gulch Storm Drain, approximately 0.4 miles northeast of the Wharf. The potential media of concern is soil and surface water. The potential contaminants of concern include Dichlorodiphenyltrichloroethane (DDT), diesel, insecticides, pesticides, fumigants, herbicides, waste oil, motor, hydraulic, and lubricating. The status of this site is ‘open assessment & interim remedial action as of 8/28/2008.’

There are no military cleanup sites in the City.

The nearest EnviroStor database listed site is Opal Cliffs School cleanup site approximately 0.3 west of the Wharf (EPA 2019). This site has a status of ‘no further action’.

The nearest active site is the Homeless Garden Project, approximately 1.6 miles west of the Wharf.

None of the identified sites above are located within or adjacent to the Project site. The proposed Project would be confined to the existing wharf and small adjacent 16 by 458-foot expansion area. The Project does not propose activities that have the potential to disturb contaminants at sites identified on the GeoTracker or EnviroStor database. No impacts are anticipated, and no mitigation is required.

c) Would the Project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

No impact. The nearest school, Opal Cliffs School, is located approximately 0.3 miles west of the Wharf and does not occur within a quarter mile of the proposed Project. The Project proposes to remove creosote treated piles from the marine environment and dispose of them at an appropriate upland facility. No new creosote treated piles would be introduced into the environment. No impacts are anticipated and no mitigation is required.

d) Would the Project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

No impact. A review of the Department of Toxic Substances Control’s Hazardous Waste and Substances List (Cortese List) indicated that the Project site is not located on any identified hazardous material sites.
(DTSC 2019). There are no sites identified on the Cortese List within the City. A review of the State Water Resources Control Board’s LUST GeoTracker indicated that the nearest active cleanup program site is 0.4 miles northeast of the site. Review of the Environmental Protection Agency (EPA) EnviroStor database indicated that the nearest listed hazardous material site is approximately 1.6 miles west of the Wharf (SWRCB 2019; EPA 2019). No impacts are anticipated and no mitigation is required.

e) For a Project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard or excessive noise for people residing or working in the Project area?

**No impact.** There are no airports or private airstrips within the City boundaries (City of Capitola 2013). The closest airstrip to the Project site is the Monterey Bay Academy airstrip, approximately 6.5 miles southeast of the Wharf. The nearest airport is the Watsonville Municipal Airport, approximately 8 miles southeast of the Wharf. The Project does not include any elements that would create safety hazards associated with airports or air travel. Excessive noise at the Wharf due to air traffic is not anticipated given the distance to the nearest airstrip and airport. No impacts are anticipated and no mitigation is required.

f) Would the Project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

**No impact.** The Project would neither physically interfere with nor impair implementation of any existing emergency response plan or emergency evacuation plan. The Project only proposes structural enhancements and public access improvements at the existing Wharf. Access to the Wharf would be temporarily impacted during construction, but the Project would not block roads that could provide emergency response or evacuation. All major highways would remain fully accessible. No impacts are anticipated and no mitigation is required.

g) Would the Project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires.

**No Impact.** The proposed Project would occur at the existing Wharf which extends from Capitola Beach to Monterey Bay. The Project would not occur in a high fire risk area according to the City of Capitola General Plan Update EIR (City of Capitola 2013). The Project does not propose activities that could exacerbate wildfire risks. The Project only proposes structural enhancements and public access improvements at the existing Wharf. The Project would not change current topography or wind patterns. No impacts are anticipated and no mitigation is required.

Cumulative Impacts

**Less than significant impact.** Less than significant impacts are anticipated from the Project. Deteriorated and/or damaged piles installed as part of this Project may require pile replacement in the future. Any pile replacements in the future would be permitted and approved by the agencies. All piles would be disposed
of at an appropriate upland facility and are not anticipated to pose a significant hazard. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant hazards and hazardous materials impact in consideration of the proposed Project. No impacts are anticipated, and no mitigation is required.

Avoidance, Minimization and/or Mitigation Measures

No significant impacts were identified and no mitigation measures are required.

### 3.10 Hydrology and Water Quality

**a) Would the project violate or conflict with any adopted water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?**

**Less than significant with mitigation.** The Project proposes structural enhancements and public access improvement at the existing Wharf. The trestle would be widened by 16 feet and would result in 7,400 square feet of additional ACZA timber decking. The City of Capitola General Plan Update identified urban runoff as a major factor contributing to water quality in Capitola (City of Capitola 2019). As stormwater flows over impervious surfaces pollutants on those impervious surfaces can be carried directly
to water bodies. There is no proposed increase in use of the Wharf that could substantially increase the quantity of pollutants on the Wharf deck. The expansion of the trestle would not require the removal of any vegetated buffer that could provide biofiltration of stormwater.

The ACZA decking is above water and would not come in contact with the marine waters. There is the potential for ACZA to leach from the wood during rain events. As part of this Project, certification from the RWQCB would be required and the Project would comply with all permit conditions to assure that the Project does not substantially degrade surface or groundwater quality. For example, ACZA decking is typically sealed with a non-toxic penetrating coating (e.g. Arci-soy), which may be a condition of the RWQCB’s water quality certification if deemed necessary. Implementation of permit conditions required by the regulatory agencies would ensure potential impacts to water quality are less than significant. Although compliance with expected permits would ensure potential impacts are less than significant, mitigation measure MM HWQ-1 has been included to document the need for obtaining and complying with such permits.

The Project proposes to install 120, 16-inch composite (fiberglass) piles with HDPE sleeves and would repair or replace approximately 21, 12-inch damaged creosote piles. Replacement piles would be ACZA treated, polyurea coated timber piles or composite piles. Polyurea is designed to fully encapsulate treated timber products by creating a mechanical monolithic bond to the treated timber pile. Polyurea is applied at the treating facility and allowed to completely integrate into the woods surface. Studies have verified that polyurea successfully inhibits the leaching of ACZA components from timber piles (Konkler and Morrell 2016). Use of regulatory agency-approved materials as a condition of required permits would ensure potential impacts to water quality are less than significant. Based on the analysis above, potential impacts would be less than significant. A comment from CDFW (Appendix G) received during the Draft IS/MND public circulation period stated that polyurea may become damaged by contact with boats or debris, allowing harmful substances to enter the water through the damaged coating; therefore, annual monitoring to assess the integrity of the polyurea coating and repair any damage that may have occurred has been included in MM HWQ-2 at the recommendation of CDFW. No new issues have occurred as a result of the comment and no additional mitigation is required.

In-water activities such as pile driving would create temporary localized elevations in turbidity. Hydraulic jetting has the greatest potential to cause sediment disturbances of the proposed installation methods. In-water construction activities would occur within intertidal and shallow subtidal areas, which regularly experience turbidity from wave action on the sandy shoreline. In addition, Soquel Creek discharges high levels of turbidity adjacent to the Wharf. Therefore, potential turbidity elevations above baseline would be minimal. Based on the environmental conditions at the site, discussions with the project engineers, and informal discussions with regulatory agencies on April 20, 2020 and April 28, 2020 water quality impacts from the use of hydraulic jetting would be less than significant and no mitigation is required.

Capitola Beach waters are periodically declared unsafe for body contact. Closures are typically due to bacterial contamination. Bacterial contamination is attributed to high numbers of roosting birds, leaky sewer lines, manholes, and urban runoff. The Project proposes to construct two new restrooms, one of
which would replace the existing restroom at the head of the Wharf. There is no proposed increase in use that would be anticipated to impact water quality. The existing sewer line would be relocated to above deck to provide protection from waves and prevent storm related damage and leaks. The sewer line would connect to the existing sewer system and be maintained and checked regularly for leaks same as under existing conditions. No impacts are anticipated, and no additional mitigation is required.

b) Would the Project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

No impact. The Project proposes structural enhancements and public access improvements at the existing Wharf. The Project occurs over water and would not be anticipated to interfere with groundwater recharge. The Project does not propose pumping or extraction of groundwater. The Project would not deplete groundwater supplies and would not interfere with groundwater recharge by building additional wells. Therefore, impacts are not anticipated and no mitigation is required.

c) Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) result in substantial erosion or siltation on- or off-site;

No impact. The Project would not alter the course of a stream or river. The Project proposes to widen the existing trestle of the Wharf by 16 feet. This would result in approximately 7,400 square feet of additional impervious surface at the site; however, no areas are located downstream and gaps between boards of the Wharf decking would allow for rainwater to drain through to the bay below, same as existing conditions with the current Wharf structure. Because this impervious surface occurs overwater, no erosion or siltation would occur. No impacts are anticipated, and no mitigation is required.

ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;

No impact. The Project site extends over Monterey Bay; therefore, there are no areas downstream of the Project that could be exposed to flooding from surface runoff. As discussed above, gaps between boards of the proposed expanded Wharf decking would allow for rainwater to drain through to the bay below, same as existing conditions with the current Wharf structure. The construction of the widened trestle would not require the removal of any vegetated areas that could provide flooding buffers on or off-site areas. The Project does not propose any fill or structures that could reduce flood-carrying capacity. No impacts would occur, and no mitigation is required.
iii) create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff;

*Less than significant with mitigation.* The existing Wharf and proposed Wharf improvements would not be tied to an existing or planned stormwater drainage system, as the Project is located over water and does not require a stormwater drainage system for runoff management. In addition, there is no proposed increase in Wharf use that could substantially increase the quantity of pollutants on the Wharf deck.

The ACZA decking is above water and would not come in contact with the marine waters. There is the potential for ACZA to leach from the wood during rain events. As part of this Project, certification from the Regional Water Quality Control Board (RWQCB) would be required and the Project would comply with all permit conditions to assure that the Project does not substantially degrade surface or groundwater quality. For example, ACZA decking is typically sealed with a non-toxic penetrating coating (e.g. Arctisoy), which may be a condition of the RWQCB's water quality certification if deemed necessary. Implementation of permit conditions required by the regulatory agencies would ensure potential impacts to water quality are less than significant. Although compliance with expected permits would ensure potential impacts are less than significant, mitigation measure MM HWQ-1 has been included to document the need for obtaining and complying with such permits.

All discharges from the Project would comply with the applicable provisions of CWA section 301 Effluent Limitations, 302 (Water Quality Related Effluent Limitations), 303 (Water Quality Standards and Implementation Plans), 306 (National Standards of Performance), and 307 (Toxic and Pretreatment Effluent Standards), and with other applicable requirements of State law. The Project would meet or exceed State stormwater requirements and incorporate any applicable BMPs from Capitola’s National Pollutant Discharge Elimination System (NPDES) Permit and Stormwater Management Plan. Impacts are anticipated to be less than significant and no additional mitigation is required.

d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

*Less than significant impact.* The Project is located within the 100-year flood plain (FEMA 2016) and on the coastline. The Project only proposes structural enhancements and public access improvements to the existing facility, which will not increase the 100-year flood level in the Project area. The trestle widening would increase the Wharf structure’s resiliency against potential exposure to inundation from tsunami and storm events. In addition, the Project would relocate the utility lines, including sewer, to above the Wharf deck to decrease the chance of wave damage to the utilities systems. Potential impacts are anticipated to be less than significant and no mitigation is required.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

*No impact.* The existing drainage pattern of the site would be maintained, and the Project would be required to comply with all agency permits, including permits under the jurisdiction of the RWQCB. The Project occurs overwater and would not interfere with groundwater replenishment. The Project does not
propose an increase in use that could contribute to an increase in urban runoff pollution. No impacts are anticipated, and no mitigation is required.

Cumulative Impacts

**Less than significant impact.** Less than significant impacts are anticipated from the Project. Potential water quality impacts would be avoided through compliance with regulatory permits and through the implementation of BMPs. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant hydrology or water quality impact in consideration of the proposed Project. No cumulative impacts are anticipated, and no additional mitigation is required.

Avoidance, Minimization and/or Mitigation Measures

The following mitigation measure would be implemented to avoid and/or minimize potential impacts and to ensure impacts are less than significant:

**MM HWQ-1** The City shall obtain all necessary permits from applicable agencies with jurisdiction over the Project. The contractor will implement and document compliance with permit conditions and BMP practices required by the permits per agency requirements and for City records. Proof of implementation may include but is not limited to the use of before-and-after photo documentation, copies of receipts and/or construction management logs.

**MM HWQ-2** If ACZA treated polyurea coated piles are not used for this Project, no mitigation is required. If ACZA treated polyurea coated piles are used, the City shall implement a monitoring and maintenance plan to annually assess the integrity of the polyurea coating on all piles added as part of the Project. The monitoring plan shall be incorporated into an existing City maintenance plan or created as a new maintenance plan within 90 days after completing project construction. The monitoring and maintenance plan will include annual inspection after each winter storm season to assess the integrity of the polyurea coating and repair of any damage to the coating that may have occurred.

<tbody>
<tr>
<td></td>
<td>a) Physically divide an established community?</td>
<td>☐ ☐ ☐ ☑</td>
<td></td>
</tr>
<tr>
<td></td>
<td>b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?</td>
<td>☐ ☐ ☐ ☑</td>
<td></td>
</tr>
</tbody>
</table>

a) Would the Project physically divide an established community?

No impact. The Project site is located at the existing Wharf over Monterey Bay. The Project does not propose the construction of new structures that could divide a community. The Project only proposes structural enhancement of the existing Wharf including widening the trestle by 16 feet and public access improvements along the Wharf. The Project is anticipated to benefit the community by improving public access along the Wharf. The Project would not divide the established community. Impacts are not anticipated, and mitigation is not required.

b) Would the Project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

No impact. The Project site land use is designated as Parks and Open Space (City of Capitola 2019). The Project does not propose any changes to land use. The Project proposes structural enhancements and public access improvements that are anticipated to improve the current use of the Wharf. The Project would assure access to the facility is maintained for all populations. The burdens and benefits of the proposed Project would be equally shared. Upland disposal of any deteriorated and/or damaged piles or other construction debris would be disposed of at an appropriate authorized facility. No impacts are anticipated, and no mitigation is required.

Cumulative Impacts

No impact. No impacts are anticipated from the Project. The Project does not propose any changes to the existing land use of the Project site. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant land use and planning impact in consideration of the proposed Project. No impacts are anticipated, and no mitigation is required.
Avoidance, Minimization and/or Mitigation Measures

No impacts were identified, and no mitigation measures are required.

Capitola General Plan Update, (City of Capitola 2019).
3.12 Mineral Resources

Mineral Resources

Would the Project:

<table>
<thead>
<tr>
<th>Potentially Significant Impact</th>
<th>Less Than Significant with Mitigation</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
</table>

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No impact.

According to the City of Capitola General Plan Update, there are no mineral resource zones within the Project footprint or within the City sphere of influence (City of Capitola 2019). The nearest identified mine is Aptos Placer mine approximately 2.2 miles northwest of the Wharf (USGS 2019). The United States Geological Survey (USGS) Minerals Resource Data System did not identify any critical or major mineral deposits in the Project footprint or in the City. The nearest mineral deposit is iron, titanium and metal at the Aptos Placer mine approximately 2.2 miles northwest of the Wharf. Given the nature of this Project, neither impacts to mineral resources nor the loss of availability of mineral resources are anticipated. No impacts are anticipated, and no mitigation is required.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No impact.

As discussed above, there are no mineral resource zones within the Project footprint or the City sphere of influence. Therefore, the Project is not anticipated to result in the loss of availability of a locally-important mineral resource recovery site. No impacts are anticipated and no mitigation is required.

Cumulative Impacts

No impact. No impacts are anticipated from the Project. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant mineral impact in consideration of the proposed Project. No impacts are anticipated, and no mitigation is required.

Avoidance, Minimization and/or Mitigation Measures

No impacts were identified, and no mitigation measures are required.

a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

b) Generation of excessive ground-borne vibration or ground-borne noise levels?

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?

3.13 Noise

a) Would the Project result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

*Less than significant with mitigation.* The Capitola City General Plan Update in its Chapter 6, Safety and Noise Element, acknowledges the potential negative effects of noise on humans (City of Capitola 2019). The primary noise source in Capitola is automobile noise. The City’s General Plan establishes land use compatibility criteria in terms of the Community Noise Equivalent Level (CNEL) for various types of development/uses, including residential uses. Sensitive land uses such as residential areas, hospitals, libraries, schools, parks, and retirement homes generally have more stringent noise requirements compared to less sensitive uses such as commercial and industrial zones. The City’s noise and land use compatibility guidelines shown in Table 3, are typically applicable to long-term, operational effects of developments within the City, not temporary construction noise.

Source: City of Capitola 2019 General Plan Update

Section 9.12.010 of the City of Capitola Municipal Code states that loud, boisterous, irritating, penetrating or unusual noise shall be prohibited between the hours of 10:00 pm and 8:00 am on any day (City of Capitola 2019). Construction is prohibited on weekends with the exception of Saturdays between 9:00 am and 4:00 pm or emergency work approved by the building official. The Project would comply with the City’s permitted construction work hours.

Construction noise associated with the Project would be temporary and last approximately 9 months; however, most noise generated would primarily be associated with vibratory pile installation and impact pile driving proofing, which would take place over approximately 26 working days. Hydraulic jetting can be used to decrease pile driving time and the number of impact blows required to drive piles. Hydraulic jetting works by directing pressurized water flow down the pile to the soils directly beneath it, liquefying the soils at the pile tip, reducing friction, and causing the pile to descend downwards under its own weight. Hydraulic jetting would not be anticipated to produce substantial noise. The noise analysis presented in this section provides a worst-case scenario in which only vibratory and impact pile driving are used.

An estimated 120 new piles and 8 replacement piles would be installed for the trestle expansion and repair work at about 5 piles per day, requiring approximately 15 minutes of vibration per pile. Therefore, the Project would generate about 1 hour and 15 minutes of vibratory pile driving noise per day during each of the 26 working days, spread over the course of the working day. Additional impact pile driving used for proofing each pile at the end of install would be conducted as needed and last approximately 20 minutes total per day. Hydraulic jetting may be used to decrease pile driving time and the number of impact blows required to drive piles. Hydraulic jetting would not be anticipated to produce substantial noise but may reduce the duration of noise generated by vibration and impact installation methods.

Areas zoned as single-family residential are located approximately 0.5 miles northwest of the Wharf and areas zoned as neighborhood mixed-use are approximately 30 feet east of the Wharf. The nearest school is 0.3 miles east of the Wharf. Additionally, the closest unit in the Capitola Venetian Hotel is located immediately adjacent on the eastern side of the Wharf approximately 88 feet from the proposed pile driving. Outdoor activity area of the closest residential receptor (4940 Cliff Drive) to the Project’s main...
work area (as measured by distance between the receptor and location of where the new expanded deck would begin near the Wharf foot) is 80 feet. At its farthest locations, Project construction work would be in excess of 500 feet from these sensitive receptors.

The nearest sensitive receptor is residential, located approximately 80 feet away to the closest proposed pile installation location near the Wharf Foot. A typical vibratory pile driver would generate a maximum noise level of approximately 95 dBA at a distance of 50 feet from the equipment (FTA 2018). A typical impact pile driver used for proofing would generate a maximum noise level of approximately 101 dBA at a distance of 50 feet from the equipment (FTA 2018). Generally, in-air sound levels for a point source decrease by 6 dBA for each doubling of distance (FHWA 2017). Based on the locations of the nearest noise-sensitive receivers, vibratory pile driving and impact pile driving maximum noise levels would be between 75 dBA to 91 dBA and 81 dBA to 97 dBA, respectively, at exterior locations of these receivers. The noise calculations are included in Appendix E.

Within interior spaces of the nearest residential land uses, additional noise attenuation would be provided by the building shell. Noise reduction afforded by structures with open windows is typically about 17 dBA, and about 25 dBA with closed windows (NCHRP 1971). This means that vibratory pile driving would generate maximum noise levels in the range of 57 dBA to 73 dBA within buildings with open windows and 49 dBA to 65 dBA inside homes with closed windows. Impact pile driving would generate maximum noise levels in the range of 63 dBA to 79 dBA within buildings with open windows and 55 dBA to 71 dBA inside homes with closed windows.

Table 4 describes typical A-weighted noise levels for common indoor and outdoor noise source activities.

Table 4: Typical A-Weighted Noise Levels
When compared with the noise levels in Table 4, it is apparent that Project construction noise levels during pile installation would be clearly audible to occupants of the nearest buildings to the Wharf.

Based on the analysis above, potential construction-related impacts would be transient and temporary (i.e. approximately 1 hour and 35 minutes of non-contiguous noise per day over approximately 26 working days). Although work would be performed within the City’s permitted municipal code construction hour requirements, temporary elevated noise levels would still be a potential source of annoyance to the nearest receivers during the workday, provided the occupants are at home during typical working hours. Therefore, mitigation measures MM NOI-1 and MM NOI-2 have been included to implement a pile driving notification plan and pile driving soft start measure to keep nearby receivers informed of the pile installation schedule and to reduce potential for startle noise. These measures in combination with measure MM BIO-2 (use of a sound dampening cushion for pile driving) described in the Biological Resources Section 3.4 would ensure potential for residential annoyance is minimized over the duration of Project construction and reduced to less than significant.

Once the Project is complete, the Wharf would continue to operate the same as under existing conditions. There is no proposed expansion of use. Therefore, there would be no long-term noise impacts associated with the Project and no mitigation is required.

b) Would the Project result in generation of excessive ground-borne vibration or ground-borne noise levels?

Less than significant with mitigation. Construction of the Project is expected to generate temporary ground-borne vibration in the immediate vicinity of certain construction activities. Ground vibration can cause human annoyance and potential building damage (City of Capitola 2013). Typical construction equipment with the potential to create ground borne vibration includes pile drivers, large bulldozers, loaded trucks, jackhammers, and small bulldozers. Of these pieces of equipment, only vibratory and impact pile drivers are proposed for construction of the Project.

Vibratory motion is commonly described by quantifying the peak particle velocity (PPV) of the vibrated ground in terms of inches per second (in/sec). California Department of Transportation (Caltrans) has developed guidelines for assessing potential for damage to buildings and annoyance to people from vibration caused by construction sources (Caltrans 2013). Table 5 shows the threshold criteria for
potential damage to various types of buildings, and Table 6 lists the various levels of perceptibility in people caused by vibration events.

Use of impact and vibratory pile drivers during construction of the proposed Project would result in generation of intermittent ground-borne vibration events at the buildings located closest to construction activities. As described above in Section 3.13 (a), vibratory pile installation would occur approximately 1 hour and 15 minutes per day, over the course of the day, for approximately 26 working days. The closest pile to existing buildings in the Project area is expected to be placed near the Wharf Foot, where the Wharf widening would begin. The nearest sensitive land uses to this location include residential buildings at distances approximately 90 to 100 feet from the pile location. A review of dates of construction of these buildings shows that the nearest building west of the Wharf (located at 4940 Cliff Drive) was built in 2006 and is therefore a relatively new residential building. The nearest structure east of the Wharf is an apartment building located at 1500 Wharf Road, which was built in 1930, and is therefore an older residential building. These buildings would be subject to different thresholds for assessment of potential damage to the buildings due to ground-borne vibration. Ground-borne vibration levels from impact and vibratory (during start-up and shut-down) pile drivers with a reference energy of 36,000 ft-lb is 0.65 in/sec at 25 feet from the source (Caltrans 2013).

Primary factors affecting the level of attenuation of vibration in the ground include the type and intensity of vibration at the source and the type of soil through which vibratory force propagates. The soil type in the Project area is sandy beach. Assuming the use of a pile driver similar to the reference pile driver, the ground-borne vibration level at the nearest residential building east of the Project site, located at 4940 Cliff Drive, would be a PPV of 0.093 in/sec. This is well below the 0.5 in/sec threshold of potential damage for this building. The building located at 1500 Wharf Road is located approximately 90 feet from the nearest pile location. At this distance, the calculated PPV is 0.108 in/sec, which is also below the 0.3 in/sec threshold of damage for older residential buildings. At farther pile locations along the Wharf, construction vibration levels would be lower than the above levels. Therefore, construction of the Project is not expected to result in any damage to buildings in closest proximity to the Project.

<td>0.9</td>
</tr>
<tr>
<td>Severe</td>
<td>2.0</td>
</tr>
</tbody>
</table>

Note: Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

In terms of perceptibility to the people living near the Project site, the estimated vibration levels at the nearest residences could potentially reach the “strongly perceptible” threshold of 0.1 in/sec for a frequent intermittent source (see Table 5). Therefore, nearby receivers could temporarily experience vibration levels that may be a source of annoyance during construction of the nearest piles, provided occupants are home during typical working hours. Therefore, proper timely notices of scheduled pile installation activities to local residents would be important in managing expectations and mitigating annoyance effects. Once vibratory installation reaches an approximate distance of 185 feet or more from the receiver, vibration levels would stay below the 0.04 in/sec “distinctly perceptible” threshold. Therefore, approximately 11 working days of the estimated 26 working days required for pile installation may result in approximately 1 hour and 15 minutes of intermittent “distinctly perceptible” to “strongly perceptible” levels of vibration at the nearest receivers. The vibration calculations are included in Appendix E.

Ground-borne noise levels from pile driving activities would be minimal and imperceptible as compared to airborne noise from pile installation activities. Therefore, this type of noise would be less than significant.

Based on the above discussion, mitigation measures MM NOI-1 and MM NOI-2 are required of the Project to keep nearby residents informed of pile installation activities, minimize the chance for startle effect and minimize the potential for human annoyance. Implementation of MM NOI-1 and MM NOI-2 would ensure temporary construction impacts are less than significant. No long-term operational impacts would occur as the Project proposes no change in existing operations of the Wharf.

c) For a Project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?

**No impact.** The Project site is not located within an airport land use plan. The closest airstrip to the Project site is the Monterey Bay Academy airstrip approximately 6.5 miles southeast of the Wharf (City of Capitola 2019). The nearest airport is the Watsonville Municipal Airport approximately 8 miles southeast of the Wharf. The Project would not expose people residing or working in the area to excessive noise levels.
noise levels associated with airports or airstrips. The Project does not include the construction of residential uses that could expose people to excessive noise levels. Given the distance to the nearest public airport and airstrip, no impacts are anticipated and no mitigation is required.

**Cumulative Impacts**

**Less than significant impact.** Less than significant noise impacts are anticipated from the Project. The Project would abide by the permitted construction hours mentioned above. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant noise impact in consideration of the proposed Project. Therefore, potential cumulative impacts are anticipated to be less than significant.

**Avoidance, Minimization and/or Mitigation Measures**

The following mitigation measures are required:

**MM NOI-1** Pile Driving Notification Plan – The City shall implement a pile driving notification plan as described herein to keep residents informed of the Project’s pile driving schedule. Prior to pile driving activities and within 2 weeks after award and execution of the construction contract, the Contractor shall provide the City with a pile driving schedule that identifies: (1) start date of pile driving, (2) anticipated weekly work zones by estimated date shown on an aerial map (or plan sheet overview), (3) estimated pile driving completion date, and (4) website address for accessing the pile driving schedule on-line. The Contractor shall be required to post and maintain the schedule onsite near the Wharf Foot. The Contractor shall update the schedule at least every two weeks and provide the schedule to the City by the following day for posting on the City’s website.

**MM NOI-2** Pile Driving Soft Start – Pile-driving shall commence with a soft start procedure (ramping up) in order to reduce the potential for startle and annoyance of nearby receptors. This shall be noted on the Project’s construction plans.

</tr>
</tbody>
</table>

3.14 Population and Housing

a) Would the Project induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

*No impact.* The Project is only anticipated to improve the current use of the Wharf and is not anticipated to increase use of the Wharf. The Project does not propose the construction of new housing or commercial businesses that would directly induce population growth in the area. The Project would not extend roadways or other infrastructure into new areas that could lead to indirect growth. No impacts are anticipated and no mitigation is required.

b) Would the Project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

*No impact.* There are no housing units located on the Wharf. The Project would not displace housing. The Project does not propose the removal of housing. The Project would not displace people. No impact would occur and no mitigation is required.

**Cumulative Impacts**

*No impact.* None of the proposed activities would impact housing stock or encourage growth. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant population and housing impact in consideration of the proposed Project. No impacts are anticipated, and no mitigation is required.
Avoidance, Minimization and/or Mitigation Measures

No impacts were identified, and no mitigation measures are required.

3.15 Public Services

a) Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the following public services?

i) Fire protection

No Impact. The City is serviced by the Central Fire Protection District of Santa Cruz (City of Capitola 2019). The fire station is located at 405 Capitola Avenue approximately 0.18 miles northeast of the Wharf. The fire station has a response goal time of eight minutes. The station would be adequate for servicing the Project site, similar to existing conditions, without the need for alterations to existing facilities or construction of new facilities.

Proposed activities would not result in lane closures that could impact firefighter response time. The proposed Project is located on the existing Wharf and would not create a new public safety or fire hazard. The Project is not anticipated to induce population growth that would create additional demand for public services or facilities. The Project only proposes structural enhancements and public improvements at the existing Wharf and is not anticipated to increase use of the Wharf. The Project would not result in
the need for new or physically altered government facilities and would not affect response times or performance objectives. Impacts are not anticipated, and no mitigation is required.

ii) Police protection

No impact. The Capitola Police Department would provide service to the Project site in the event of a service call. The nearest station is located at 422 Capitola Avenue, approximately 0.24 miles northeast of the Wharf (City of Capitola 2013). As previously discussed, the Project would not induce population growth that could lead to any incremental or cumulative increase in demand for service, impact public facilities, or impact emergency response times. The proposed Project would not impact police response times or performance objectives. No impacts are anticipated and no mitigation is required.

iii) Schools

No impact. The nearest schools to the Project site are Opal Cliffs School at 4510 Jade Street and New Brighton Middle School at 250 Washburn Ave. Opal Cliffs School is approximately 0.3 northwest of the Wharf and New Brighton Middle School is approximately 0.58 miles northeast of the Wharf. The Project proposes structural enhancements and public access improvements at the existing Wharf. The Project does not include residential uses that would increase the use of existing school facilities identified above or require the construction of new school facilities. No impacts are anticipated and no mitigation is required.

iv) Parks

No impact. Capitola has seven public parks (City of Capitola 2019). The closest park to the Project is Esplanade Park approximately 0.2 miles east of the Wharf. This park offers oceanfront seating and a grassy field. The Project does not propose changes to existing parks. Construction related impacts to adjacent parks are not anticipated given the distance to the nearest park. The Project also does not include residential uses that would indirectly increase the use of existing park facilities or increase the demand for construction of new park facilities. The Project proposes to provide structural enhancements and public access improvements at the existing Wharf located at Capitola Beach, a public beach. The Capitola General Plan does not identify Capitola Beach as a park. No impacts are anticipated and no mitigation is required.

v) Other public facilities

Less than significant impact. The City has approximately 20 acres of beach, including Capitola Beach. The Project is located at Capitola Wharf, a public Wharf that extends from Capitola Beach over Monterey Bay. The public beach may be temporarily impacted by construction activities such as elevated noise. Portions of the beach may need to be closed off to the public during construction for safety, but access to Capitola Beach would never be fully restricted. Access to the Wharf would also be impacted temporarily during construction. Project construction could require Wharf closure from September to May. Construction would occur during the off season when use of the Wharf is low and impacts to public
use would be anticipated to be minimal. Public use of the Wharf is anticipated to improve after construction of the proposed Project due to fewer Wharf shutdowns, a separate pedestrian walkway, lightening improvements, and additional seating. Potential temporary impacts from the proposed construction would be less than significant and would result in long-term benefits to public services. No mitigation is required.

**Cumulative Impacts**

*Less than significant impact.* Less than significant impacts are anticipated from the Project. Use of the Wharf and Capitola Beach may be temporarily impacted by the proposed construction. Use of Capitola Beach would never be fully restricted. The Wharf may be closed for nine months during the off season. Potential temporary impacts from the proposed construction would be less than significant and no mitigation is required. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant public services impact in consideration of the proposed Project. Potential temporary impacts from the proposed construction would be less than significant and no mitigation is required.

**Avoidance, Minimization and/or Mitigation Measures**

No significant impacts were identified and no mitigation measures are required.

a) Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? □ □ □ ❌

b) Does the Project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment? □ □ ❌ □

3.16 Recreation

a) Would the Project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No impact. The Project only proposes structural enhancements and public access improvements at the existing Wharf. The Project is not anticipated to increase use of the Wharf, but instead would improve current uses. The Project proposes no increase in residential development that would increase the demand for parks or other recreational facilities. The Project is also not expected to cause a significant increase in employment, only temporary construction related jobs. The Project does not propose the construction of new stores or commercial buildings. Therefore, no direct or indirect increase in demand or use of existing parks or recreational facilities would result from Project implementation. Impacts are not anticipated and no mitigation is required.

b) Does the Project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Less than significant impact. Capitola Beach is used for recreational activities such as fishing, beach sports, and swimming. The Wharf is used for recreational activities and contains a bait shop, boat rentals, boat launch, restaurant, restroom facilities on the backside of the restaurant, and fish cleaning stations. The proposed Project would assure the safe and continued use of the Wharf while providing additional public improvements. The Project proposes to widen the trestle of the Wharf to improve the structural integrity of the Wharf and to provide a separate lane for pedestrian travel. There is no proposed expansion in use. The Project only proposes to improve current uses of the Wharf. Widening of the trestle would result in 7,400 sf of additional overwater coverage. The Project would remove damaged deteriorated creosote treated wood piles and replace piles with fiberglass composite piles or ACZA treated polyurea coated wood piles. Wood piles would be ACZA treated and polyurea coated. No new creosote treated wood piles would be introduced into the marine environment. No impacts to the physical environmental are anticipated other than those analyzed and disclosed in this IS/MND. Less than significant impacts are anticipated and no additional mitigation is required.
Cumulative Impacts

Less than significant impact. As discussed above, the Project would ensure the safe and continued use of the Wharf and provide additional public access improvements. Environmental effects from the proposed Project are anticipated to be less than significant. Temporary construction related impacts are anticipated to be less than significant. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant recreation impact in consideration of the proposed Project. No additional mitigation is required.

Avoidance, Minimization and/or Mitigation Measures

No significant impacts were identified, and no mitigation measures are required.

### 3.17 Transportation

**a) Would the Project conflict with a program, plan, ordinance or policy addressing the circulation system, including transit roadway, bicycle and pedestrian facilities?**

*Less than significant impact.* Capitola is serviced by Santa Cruz Metropolitan Transit. The Project is not located on any identified routes (City of Capitola 2019). The nearest route is approximately 0.05 miles north of the Wharf foot. Capitola adopted the Bicycle Transportation Plan in 2011. This plan sets goals and objectives to increase safety and convenience for bicyclers. The Project is not located on any bike paths. The nearest bike path is approximately 0.05 miles north of the Wharf foot. The City of Capitola General Plan Update recognizes the importance of pedestrian access. There are many areas in Capitola that have been identified as not having adequate sidewalks. Policy MO-9.2 of the General Plan Update is to maintain and improve pedestrian pathways in Capitola, particularly pathways that provide pedestrians access to natural areas and scenic vistas. The Wharf trestle currently supports both vehicular traffic and pedestrian traffic with no separation between the two. The Project proposes to widen the Wharf trestle, which would provide a separate pedestrian walking path. This is anticipated to improve public safety and access to the Wharf over the long-term.

During construction the Wharf would be temporarily closed to vehicular, bicycle and pedestrian traffic to maintain public safety. The Wharf would be closed during the off season from September to May to minimize impacts to the public, but this would not impact the circulation system. Adjacent roads and access to Capitola Beach would not be restricted. Closure of the Wharf would be temporary and would not impact access to the beach or adjacent roadways. The Project would not conflict with any circulation
plans, ordinances, or policies and would be anticipated to help meet the goal of Policy MO-9.2. Less than significant impacts were identified and no mitigation is required.

b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

No impact. The Project would not result in a change in automobile use or VMT because it is not related to roadway transportation or land-use changes. The Project only proposes structural enhancements and public access improvements at the existing Wharf. There is no proposed change in use. No impacts are anticipated and no mitigation is required.

c) Would the Project substantially increase hazards due to a geometric design feature (e.g., sharp curves of dangerous intersections) or incompatible uses (e.g., farm equipment)?

No impact. The Project does not propose geometric design features such as sharp curves of dangerous intersections. The expanded section of the trestle is rectangular. The new restrooms are modular and would be mostly constructed offsite. There is no proposed change in Wharf use. Impacts are not anticipated from the proposed Project and no mitigation is required.

d) Would the Project result in inadequate emergency access?

No impact. Access to the Wharf would be temporarily impacted during construction, but the Project would not block roads that could provide emergency response. All major highways would remain fully accessible. The Wharf would be closed to the public from September to May to assure public safety during construction. Access on and off the Wharf would be restricted to Project personnel only. Proper safety precautions would be taken to assure Project personnel safety. The Project proposes to widen the trestle by 16 feet which would be anticipated to improve access along the Wharf over the long-term. No impacts are anticipated and no mitigation is required.

Cumulative Impacts

No impact. No impacts are anticipated from the proposed Project. During construction, access to the Wharf would be temporarily restricted but this would not impact the circulation system. Access to roads that provide emergency response would not be blocked. The Project would be anticipated to improve public access to the Wharf in the long-term. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant transportation impact in consideration of the proposed Project.

Avoidance, Minimization and/or Mitigation Measures

No significant impacts were identified and no mitigation measures are required.

Sources

General Plan Update (City of Capitola 2019); General Plan Update EIR (City of Capitola 2013).
Tribal Cultural Resources

Would the Project cause a substantial adverse change in the significance of a Tribal Cultural Resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:

- Potentially Significant Impact
- Less Than Significant with Mitigation
- Less Than Significant Impact
- No Impact

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

3.18 Tribal Cultural Resources

Coordination between M&N and the City occurred in January 2020 to identify any tribes that have previously requested to be notified about City projects under AB 52. This coordination effort found that no tribes have requested notification with the City under AB 52. Because no tribes have requested notification or consultation, the City is not required to consult under AB 52.

Would the Project cause a substantial adverse change in the significance of a Tribal Cultural Resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:

a) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or

b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.
Less than significant impact. Per the City General Plan EIR, Capitola is built on the location of an Indian village that existed for more than 1,000 years. Native inhabitants, known as the Soquel Indians, were removed to the Mission Santa Cruz when it was established in 1791. Nearly all traces of the Soquel “rancheria” and its culture vanished. Archaeological resources are defined as the material remains of any area’s pre-historic (aboriginal/Native American) or historic (European and Euro-American) human activity. Archaeological resources are known to occur within the City’s Plan Area.

As discussed above in Section 3.5.b), the Project only proposes structural enhancements and public access improvements at the existing Wharf. There would be no major excavation that could disturb archaeological resources, including potential buried tribal cultural resources. Sediment disturbance would be limited to pile sleeving and pile driving. Pile sleeving may require a diver to use a handheld shovel and dig directly around the pile to approximately 1 ft deep to allow for placement of the sleeve. Sediments here are in constant flux due to the high-energy wave environment so tribal resources would not be anticipated to occur. Due to the nature of the Project, it is unlikely that tribal cultural resources would be encountered. No impacts are anticipated and no mitigation is required.

Cumulative Impacts

No impact. No other projects have been identified in the area that would contribute to a cumulatively significant impact.

Avoidance, Minimization and/or Mitigation Measures

No significant impacts were identified and no mitigation measures are required.

</tbody>
</table>

3.19 Utilities and Service Systems

a) Would the Project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Less than significant impact. The Project proposes to construct two new restrooms, one of which would replace the existing restroom at the head of the Wharf. A new additional restroom would be constructed at the foot of the Wharf. The new restrooms would require water, electric power, natural gas for heating water, and wastewater treatment. The new restrooms are not anticipated to substantially increase the demand on water, natural gas, or wastewater treatment as there would be at most a de minimis increase in use. There also would be minor increases in electricity usage from keeping the new additional restroom lit. The Project would not require the relocation, or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities. The Project proposes the relocation of utility lines from below deck to above deck to protect the utility lines from waves, but does not require the relocation, or construction of new or expanded water, wastewater
treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities. Less than
significant impacts would occur and no mitigation is required.

b) Would the Project have sufficient water supplies available to serve the Project and reasonably
foreseeable future development during normal, dry and multiple dry years?

**No impact.** There is no proposed substantial increase in use and additional water supply would not be
required for the Project. No impact would occur and no mitigation is required.

c) Would the Project result in a determination by the wastewater treatment provider which serves or may
serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the
provider's existing commitments?

**No impact.** Please refer to the discussion under Section 3.9(a). There is no proposed increase in demand.
No impacts are anticipated and no mitigation is required.

d) Would the Project generate solid waste in excess of State or local standards, or in excess of the
capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

**Less than significant impact.** Policy OSC-11.1 of the City of Capitola set the goal of increasing
community diversion of solid wastes by 60 percent by 2020. Policy OSC-11.3 requires mandatory
recycling of building demolition materials. Policy OSC-11.4 encourages building designs that minimize
waste and consumption in construction projects. The Project proposes to remove creosote treated
deteriorated damaged piles from the marine environment. Piles would be disposed of at an upland
permitted disposal site. Reuse is not recommended due to the toxicity of creosote. Construction debris
suitable for reuse would be recycled in accordance with City requirements.

According to the City of Capitola General Plan Update, all solid wastes collected in Capitola are
transferred to the Monterey Peninsula Class III Landfill. As of 2019 this Landfill had a life capacity of
100 years and a waste capacity of approximately 40 million tons (City of Capitola 2019). No new
businesses or residences are proposed that are typically associated with more substantial amounts of
construction and operational waste streams. The Project has been designed to minimize waste and
consumption. The Project’s contribution to solid waste is considered less than significant and no
mitigation is required.

e) Would the Project comply with federal, state, and local management and reduction statutes and
regulations related to solid waste?

**Less than significant impact.** Policy OSC-11.1 of the City of Capitola set the goal of increasing
community diversion of solid wastes by 60 percent by 2020. Policy OSC-11.3 requires mandatory
recycling of building demolition materials. The Project proposes to remove creosote treated deteriorated
damaged piles from the marine environment. Piles would be disposed of at an upland permitted disposal
site. Reuse is not recommended due to the toxicity of creosote. Other construction debris would be
recycled per applicable regulations, such as the City’s Construction Waste Management Plan requirements. All construction debris disposal would comply with required federal, state, and local management regulations. Impacts are anticipated to be less than significant and no mitigation is required.

Cumulative Impacts

Less than significant impact. Less than significant impacts are anticipated from the proposed Project. The proposed Project would result in solid wastes and some additional utility usage. The Project would not be anticipated to exceed the capacity of current utility and/or solid waste facilities. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant utility and service system impact in consideration of the proposed Project. Therefore, potential cumulative impacts are anticipated to be less than significant.

Avoidance, Minimization and/or Mitigation Measures

No significant impacts were identified and no mitigation measures are required.

### Wildfire

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

<table>
<thead>
<tr>
<th>Potential Impact</th>
<th>Less Than Significant Impact with Mitigation</th>
<th>Less Than Significant Impact</th>
<th>No Impact</th>
</tr>
</thead>
</table>

a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

#### 3.20 Wildfire

If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:

- **No impact.** There are no wildland fire hazard areas in Capitola (City of Capitola 2019). Certain areas of Capitola with substantial amounts of vegetation are susceptible to wildfires but the Project is not located in such an area. The Project is located at the existing Capitola Wharf, which extends from Capitola Beach out and over Monterey Bay. The nearest high fire hazard area is 1.25 miles east of the Wharf (Capitola 2013). No impacts are anticipated, and no mitigation is required.

a) **Would the project Substantially impair an adopted emergency response plan or emergency evacuation plan?**

- **No impact.** The Project does not occur in a high fire hazard area. The nearest high fire risk zone occurs approximately 1.25 miles east of the Wharf. The Project proposes only structural enhancements and public access improvements at the existing Wharf. The Project would not temporarily or permanently block roads that could provide emergency response or evacuation from wildfires or other emergency. All major highways would remain open. No impacts are anticipated, and no mitigation is required.
b) Due to slope, prevailing winds, and other factors, would the Project exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

No Impact. The Project does not propose the addition of habitable buildings or structures or activities that could exacerbate wildfire risks. The Project only proposes structural enhancements and public access improvements at the existing Wharf and would not otherwise change topography or wind patterns. No impacts are anticipated, and no mitigation is required.

c) Would the Project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

No impact. The Project does not occur in a high fire hazard area. The Project only proposes structural enhancements and public access improvements at the existing Wharf. The Project does not propose or require the installation or maintenance of fuel breaks, emergency water sources, or power lines. The trestle would be expanded to allow for separate pedestrian travel. There would be minor trestle expansion for vehicles traveling on the Wharf, including re-decking. There would also be minor utility upgrades such as relocating the utilities to above deck. No impacts are anticipated, and no mitigation is required.

d) Would the Project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

No impact. The Project does not occur in a high fire hazard area. The Project does not propose changes to topography such as slope or drainage changes. The Project only proposes structural enhancements and public access improvements at the existing Wharf. No habitable buildings or structures are proposed or located within the Project footprint. No impacts are anticipated and no mitigation is required.

Cumulative Impacts

No impact. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant wildfire impact in consideration of the proposed Project. Due to the nature of dredging operations and absence of high fire risk areas in the Project Vicinity, no Project impacts or cumulative Project impacts would occur, and no mitigation is required.

Avoidance, Minimization and/or Mitigation Measures

No significant impacts were identified and no mitigation measures are required.

a) Does the Project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

b) Does the Project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a Project are considerable when viewed in connection with the effects of past Projects, the effects of other current Projects, and the effects of probable future Projects.)

c) Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

3.21 Mandatory Findings of Significance

a) Does the Project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Less than significant with mitigation. As discussed in Section 3.4, the Project Action Area provides habitat for a variety of wildlife including special status species. MM BIO-1 would require environmental training of work crews prior to the start of the proposed Project. This would be anticipated to help protect the identified biological resources in the area. In addition, mitigation measures are proposed to protect special status species from potential noise impacts. MM BIO-2 would require the use of a wood cushion block or other comparable noise dampening device to reduce noise levels and MM BIO-3 would require the implementation of an exclusion/shutdown zone defined as the distance in which underwater noise would attenuate to the Level B threshold for marine mammals. To protect special status birds MM BIO- 4 would require pre-construction nesting bird surveys and 300-foot buffers around all active nests. Avoidance and minimization measures MM BIO-1 through MM BIO-4 would be anticipated to assure that impacts to habitats and sensitive wildlife species do not occur.
The Project would also protect water quality through the implementation of water quality BMPs required under mitigation measure **MM HWQ-1 and MM HWQ-2**. As described above in Section 3.10, implementation of **MM HWQ-1 and MM HWQ-2** would ensure potential impacts to water quality would be less than significant.

Finally, as discussed in Section 3.5, potential impacts to historical resources (i.e. the Wharf and Capitola Beach Cultural Landscape District) would be less than significant with implementation of mitigation measure **MM CUL-1**, which would require the City’s Architectural & Site Review Committee to verify the Project’s 100% design plans are consistent with the recommendations provided in the Interior’s Standards and Historic Integrity Review prior to approval. The Wharf has been repaired, rebuilt, and changed several times throughout its history. The proposed Project is not anticipated to substantially change the character of the Wharf. To the extent feasible, the proposed Project has been designed to utilize similar materials and construction methods as those historically used at the Wharf. The Project would ensure the structural integrity of the Wharf’s service life and reduce potential for damage of existing elements and closures. Therefore, the Project is not anticipated to eliminate part of California’s history or prehistory and potential impacts would remain less than significant with implementation of **MM CUL-1**.

b) Does the Project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a Project are considerable when viewed in connection with the effects of past Projects, the effects of other current Projects, and the effects of probable future Projects)?

**Less than significant impact.** The Project would not result in potentially significant Project-level or cumulative impacts. No other projects have been identified associated with the Wharf or surrounding area that could cumulatively contribute to a significant cumulative impact in consideration of the proposed Project. No significant cumulative impacts have been identified and no mitigation is required.

c) Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

**Less than significant with mitigation.** Previous sections of this IS/MND reviewed the Project’s potential temporary impacts related to air quality and noise among other environmental issue areas. As discussed, the Project would result in less than significant environmental impacts for air quality and would not require mitigation measures. Mitigation measures **MM NOI-1 and MM NOI-2** would require implementation of a pile driving notification plan and use of pile driving “slow-start” in order to keep nearby residents informed of the construction schedule and to reduce the potential for startle and annoyance of nearby receptors. Implementation of these measures would ensure potential impacts are less than significant.

INTENTIONALLY LEFT BLANK
1 Introduction

The proposed Capitola Wharf Resiliency and Public Access Improvement Project (Project) is located at the Capitola Wharf (Wharf) in the City of Capitola (City), Santa Cruz County, California (Figure 1). The proposed Project would enhance Wharf resiliency as well as improve public safety by expanding a section of the Wharf’s narrow existing trestle system and completing necessary repairs. The proposed Project would also provide improved public access with an expanded bridge deck that reduces pedestrian and vehicular conflicts and by constructing two new restroom facilities for beach and Wharf users.

This Biological Technical Report (BTR) for the proposed Project describes the Project and documents the existing biological resources at the action area, including special-status species and potential Essential Fish Habitat (EFH). This BTR also evaluates potential impacts to these biological resources due to proposed Project construction. This BTR is intended to support formal consultation with the United States Fish and Wildlife Service (USFWS), National Marine Fisheries Service (NOAA Fisheries), California Department of Fish and Wildlife (CDFW), and other interested agencies.

1.1 Project Location

The proposed Project is located in the City of Capitola (City), Santa Cruz County, California, on Capitola Wharf at Capitola Beach (Figure 1). The Wharf extends from Capitola Beach into Monterey Bay and supports one lane of both combined vehicular and foot traffic. The Wharf is primarily used for recreational activities, and also hosts a restaurant and a boat shop. The Wharf extends approximately 866 feet long from the shore where it connects to the paved portion of Wharf Road, and can be divided into two sections: the trestle and Wharf head. The Wharf trestle is approximately 543 feet long, and is approximately 20 feet wide for the majority of the trestle, with an approximately 36-foot wide segment that extends for 85 feet at the connection to paved Wharf Road. The trestle extends out from shore to the wider Wharf head, which is approximately 323 feet long and 60 feet wide. The restaurant, boat rentals, boat launch, summer dock, and restroom facilities are located on the Wharf head.

The piles are 12 – 14-inch diameter creosote-treated timbers aligned in rows (“bents”) perpendicular to the Wharf centerline at 12 foot nominal spacing. There are typically three piles per bent along the trestle, and six piles at the Wharf head. The Wharf head also includes twelve 14-inch diameter steel piles at the face. These steel piles were installed to increase the stiffness of the Wharf end to resist wave forces and resulting deflection. The piles support timber cap (10-inch x 12-inch) beams (pile caps) that span across the bent. The caps support stringers (6-inch x 12-inch) that in turn supports the Wharf decking (3-inch x 12-inch planks).

The approximate midpoint of site coordinates where construction would occur are 36 degrees 58 minutes 13.42 seconds N latitude and 121 degrees 57 minutes 12.63 seconds W longitude.

1.2 Project Background

The elevation of the Wharf’s deck structure, 20 feet (ft) Mean Lower Low Water (MLLW), is below the crest elevation of attacking waves that are experienced during large storm events. The Wharf also experiences damage to the supporting foundation piles in winter storms when floating logs batter the piles. Depending on the severity of the storm, the resulting damage can require Wharf closure. For example, In January 2020 two pilings supporting the small boat crane were broken by strong waves and the Wharf was temporarily closed to public access. The section
of the pier containing the narrow trestle with only three supporting piles per row is the most susceptible to damage that has historically required Wharf closure. Wharf closures have happened up to two times a year and negatively impact the community through loss of business and restriction of over water access along the Wharf.

In addition to its susceptibility to damage, the narrow segment of the Wharf creates pedestrian and vehicle conflicts for pier users and vehicles traveling between the Wharf base and Wharf head.

Finally, Capitola Beach and the Wharf also currently lack adequate restroom facilities to serve beach-goers and Wharf-users. The only existing restrooms serving these populations is the bathroom at the back of the restaurant, and a seasonal portable restroom at the beach end of the Wharf.

1.3 Project Description and Purpose

The proposed Project would increase Wharf resiliency and improve public safety by expanding a section of the Wharf’s existing narrow trestle system and by completing necessary repairs to piles, pile caps, and decking. The Project would also provide improved public access with an expanded bridge deck that reduces pedestrian and vehicular conflicts and by constructing two new restroom facilities for beach and Wharf users.

Wharf expansion would add resiliency to the most vulnerable portion of the Wharf that has sustained the most critical damage in the past. Expansion would include a new fiberglass pile and timber structure expansion area. The expansion area would widen the trestle by 16 feet to approximately 36, extending for approximately 458 feet of the Wharf. This would widen the trestle to match the first 85-foot long portion of the trestle at the foot of the Wharf. Up to 120, 15-inch fiberglass piles would be added as part of the expansion. High density polyethylene covers may be added around the fiberglass piles for ultraviolet (UV) and battering protection. The timber decking expansion area would be constructed with timber treated with ammoniacal copper zinc arsenate (ACZA), which protects the timber against attack by fungus, termites, and marine boring species. The expansion would result in an increase in Wharf area of approximately 7,400 square feet (sf). Presently, the Wharf comprises approximately 30,900 sf. As part of the expansion, two separate travel areas would be created, one for pedestrians and one for vehicles. This is anticipated to improve public access and safety.

As part of the Project, existing deteriorated Wharf elements would be repaired and/or replaced as needed. Maintenance and repairs would include:

- Approximately 21, 12-inch damaged creosote-treated piles would be repaired or replaced with 12-inch ACZA treated, polyuria-coated timber piles or fiberglass piles;
- The twelve steel piles at the Wharf head would be repaired by either splicing on new steel pipe to the existing piles above the bay bottom, or by placing fiberglass jackets around these piles and grouting the inside;
- The exposed existing ACZA-treated timber decking –approximately 26,500 sf – would be replaced and 4,500 sf of ACZA-treated timber decking would be placed on top of the decking to serve as vehicle runners;
- Up to 260 linear feet of pile caps and 680 linear feet of stringers would be replaced;
- The hoist landing area would be repaired by replacing damaged timber members and metal connection hardware in kind; and
- Wharf utilities (water, sewer and electric) would be relocated above deck.

The Project also proposes public use and access improvements including:
• A new security gate and modification of the decorative Wharf gate;
• Pedestrian improvements such as improved lighting and increased number and size of benches;
• The bathroom at the head of the Wharf would be replaced, and a new bathroom at the foot of the Wharf will be constructed.

Once Project construction is complete, the Wharf would continue to operate similar to existing conditions. No change in use or intensity of use is proposed or anticipated.

1.4 Construction Methods

Wharf widening, repairs and improvements would be completed concurrently for up to nine months. Construction work would occur Monday-Friday, 7:30 AM to 5 PM and Saturday from 9 AM- 4 PM. Construction would be prohibited between the hours of 9PM and 7:30AM on weekdays, and on weekends any time other than between 9AM and 4PM on Saturday (Capitola Municipal Code 2019). Work that depends on the low tide cycle may be permitted outside of these hours with approval from the City and a minimum of 5 days advance request for such. The Wharf would be closed to public access during construction due to the risk of construction hazards. The work would be performed during the off season (Sep- May) to restore public access by the following busy summer season.

The proposed Project would require the use of cranes, diesel impact pile driver, and vibratory hammer for pile driving, power chain saw, pneumatic tools, electric power and hand tools. Work would be performed from the Wharf deck to the maximum extent practical with small boat assistance as needed. A barge-mounted crane may be used if selected by the construction contractor. In-water repairs would be performed from a small boat and a diver as needed.

Staging would occur on the deck of the Wharf or on a floating barge. Construction equipment and materials would be transported via truck on the Wharf deck or by barge. The use of a barge is not anticipated but may be preferred by the selected contractor. Construction methods for the proposed widening, repairs and improvements are outlined below.

Wharf Widening

The widening would require the use of cranes, diesel impact pile driver, and vibratory hammer for pile driving, power chain saw, pneumatic tools, and electric power and hand tools. The piles would be fiberglass and installed primarily with a vibratory hammer; an impact hammer would be used only if needed for the last few feet of penetration. Work would be performed from the Wharf deck with a crane and pile driver, to the maximum extent practical with small boat assistance as needed. A barge-mounted crane with pile driving hammer may be used if selected by the construction contractor.

Repairs

Damaged piles will be repaired by installing a fiberglass jacket around the pile. Fiberglass jackets would be filled with marine-grade grout to fill the deteriorated section and seal off the pile from the bay water. The jacket would extend above high tide to allow grout placement without any grout coming into contact with the bay water. Pile jacket installation would be performed by a small boat and diver. Grout would be injected by a sealed hose pumping the grout from above or from the shore.
Piles that are missing or severely deteriorated would be restored by driving a new pile adjacent to, or in the place of the damaged pile. New piles would be fiberglass or ACZA-treated timber piles with an inert polyurea coating (Thunderbolt Industries). Timber piles would be driven with an impact hammer.

**Improvements**

The new restrooms at the Wharf head and foot would be modular and primarily fabricated offsite. They would be delivered to the site by truck and installed at the Wharf with hand tools and power tools. Public benches would also be constructed using hand tools and power tools.

The new security gate and most of the decorative gate would be constructed of metal and fabricated offsite. They would be delivered to the site by truck and installed at the Wharf with a small crane, power and hand tools.

**Equipment List**

The following pieces of equipment are anticipated for the proposed Project and could be used at any time during the nine-month duration of the project.

- Impact pile driver
- Vibratory pile driver/extractor
- Pneumatic tools
- Power (electric and gas) saw
- Hand tools
- Cranes
- Small boat
- A barge mounted crane may be used if selected by the construction contractor
- Dive equipment as needed.
- Potential use of a floating barge for staging (use of a barge is not anticipated but may be preferred by the selected contractor)
- Trucks for transportation of construction equipment and materials

**1.5 Description of Action Area**

This BTR describes existing biological resources and potential for effects within an action area that comprises the Capitola Wharf plus a 1,000 m (3,280 ft) buffer area in the marine environment, with a 601.7-foot buffer area onshore (Figure 2). The marine action area accounts for vibratory pile driving, which has a larger radius of potential effect than does impact pile driving. Washington (WSDOT) and California (Caltrans) Departments of Transportation have compiled waterborne acoustic monitoring data for various pile driving projects, which provide support for this action area buffer zone (ICF Jones & Stokes and Illingworth and Rodkin 2009, updated in 2012). The in-water buffer distance was calculated as the distance at which project noise would dissipate to the ambient noise level. The analysis assumed that the best analog for ambient in-water noise would be the Monterey Bay nearshore measurement provided in Table 4-3, of the Caltrans technical guidance: 113dB (Caltrans 2015a). Due to the uncertainty in noise dissipation beyond 1,000 m, Caltrans guidance recommends using a 1,000 m buffer when calculated noise dissipation distances exceed that value. Both impact-driven timber piles and vibratory driven...
fiberglass piles give results that exceed 1,000 m; therefore, we use the Caltrans manual recommendations to limit the action area to 1,000 m (Caltrans 2015a). The onshore in-air action area buffer was calculated using an outdoor ambient sound level of comparative streets in Santa Cruz measured at 67 dBA Ldn1 (Goldberg 2007)). An input noise level from a vibratory pile driver (101 dBA Lmax at 50 feet) was used in the equation from 7.1.4.2 in the WSDOT Biological Assessment Prep Manual (WSDOT 2019). As stated in Section 1.4, work will occur predominantly from the Wharf itself, but a barge may also be required for certain construction activities. Representative photos of Capitola Wharf and pile framing configuration are included in Figure 3.

2 Methodology

This BTR evaluates potential impacts and disturbance associated with the proposed construction activities on biological resources within the action area, including shorebirds and coastal birds, fish, fish habitat, sea turtles, marine mammals, and other marine resources within the action area. The location, duration, timing, and intensity of construction activity effects were considered when determining the significance of effects on biological resources. In addition, existing disturbance levels in the action area were considered.

2.1 Literature Review

Existing biological resource conditions within and adjacent to the action area were initially investigated through review of pertinent scientific literature. Federal register listings, protocols, and species data provided by the United States Fish and Wildlife Service (USFWS) were reviewed in conjunction with anticipated federally listed species potentially occurring within the action area. The California Natural Diversity Database (CNDDB) was also reviewed for all pertinent information regarding the locations of known occurrences of sensitive species in the action area. The literature review also included a query of the USFWS Information, Planning, and Conservation (IPaC) System, National Oceanic and Atmospheric Administration (NOAA) California Species List Tools, USFWS Environmental Conservation Online System, NOAA Fisheries Species of Concern, CDFW commercial landings, and the NOAA Environmental Sensitivity Index (ESI). In addition, numerous regional planning documents and biological resource reports for projects within or near to the action area were reviewed and include:

Combined, the sources reviewed provided an excellent baseline from which to inventory the biological resources occurring or potentially occurring in the action area.
3 Regulatory Context

3.1 Federal Regulations

Federal Endangered Species Act (FESA). The federal Endangered Species Act (FESA) of 1973 (16 U.S.C. 1531 et seq.), as amended, is administered by the USFWS and the National Oceanic and Atmospheric Administration Fisheries Service (NOAA Fisheries). This legislation is intended to provide a means to conserve the ecosystems upon which endangered and threatened species depend and provide programs for the conservation of those species, thus preventing extinction of plants and wildlife. The FESA defines an endangered species as “any species that is in danger of extinction throughout all or a significant portion of its range.” A threatened species is defined as “any species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.”

FESA prohibits federal agencies from authorizing, permitting or funding any action that would result in biological jeopardy to or take of a species listed as threatened or endangered. NOAA Fisheries jurisdiction under the FESA is limited to the protection of marine mammals and anadromous fish; all other species are within USFWS jurisdiction. Under the provisions of Section 9(a)(1)(B) of the FESA (16 U.S.C. 1531 et seq.), it is unlawful to “take” any listed species. Take is defined as, “harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct.” Exemptions to the prohibitions against take may be obtained through coordination with the USFWS through interagency consultation for projects with federal involvement (i.e., funded, authorized, or carried out by a Federal agency) pursuant to Section 7 of the FESA or through the issuance of an incidental take permit under Section 10(a)(1)(B) of the FESA if the applicant submits a habitat conservation plan (HCP) that meets statutory requirements including components to minimize and mitigate impacts associated with the take. In a case where a property owner seeks permission from a federal agency for an action that could affect a federally listed plant or wildlife species, the property owner and agency are required to consult with USFWS. Take prohibitions in Section 9 of the ESA (16 U.S.C. 1531 et seq.) do not expressly encompass all plants.

Federal Regulation of Wetlands and Waters of the U.S. The U.S. Army Corps of Engineers (USACE) has regulatory authority for activities within wetlands under the Clean Water Act (CWA, 1977, as amended), which serves as the primary federal law protecting the quality of the nation’s surface waters. Section 404 of the CWA establishes a program to regulate discharge of dredged or fill material into “waters of the United States,” which is administered by the USACE. The term “waters” includes wetlands and non-wetland bodies of water that meet specific criteria as defined in the Code of Federal Regulations. In general, a permit must be obtained under Section 404 of the CWA before fill can be placed in wetlands or other waters of the U.S. The type of permit depends on the amount of acreage and the purpose of the proposed fill, subject to discretion of the USACE. Under Section 404, general permits may be issued on a nationwide, regional, or state basis for particular types of activities that will have only minimal adverse impacts. Individual permits are required for projects with potentially significant impacts.

Under Section 401 of the CWA, the California Regional Water Quality Control Boards (RWQCB) have regulatory authority over actions in waters of the U.S. through issuance of water quality certifications, which are issued in combination with permits issued by the USACE under Section 404 of the CWA. A 401 Certification is required from the RWQCB whenever improvements are made within Jurisdictional Waters of the U.S.

and reauthorized in 2007, is intended to protect fisheries resources and fishing activities within 200 miles of shore. The amended law, also known as the Sustainable Fisheries Act (Public Law 104-297), requires all federal agencies to consult with the Secretary of Commerce on proposed projects authorized, funded, or undertaken by that agency that may adversely affect EFH. The main purpose of the EFH provisions is to avoid loss of fisheries due to disturbance and degradation of the fisheries habitat. Monterey Bay is designated as EFH by the Pacific Fisheries Management Council to protect and enhance habitat for coastal marine fish, and macroinvertebrate species that support commercial fisheries. EFH is regulated under the Magnuson-Stevens Fishery Conservation Management Act, protecting waters and substrate necessary to fish for spawning, breeding, feeding, or growth to maturity (Magnuson-Stevens Act, 16 U.S.C. 1801 et seq.), which also includes eelgrass (Zostera marina) beds. Substrates that are considered include sediment, hard bottom, structures underlying waters, and associated biological communities.

**Marine Mammal Protection Act.** The Marine Mammal Protection Act of 1972 (MMPA), as amended, establishes a federal responsibility for the protection and conservation of marine mammal species by prohibiting the “take” of any marine mammal. The MMPA defines “take” as the act of hunting, killing, capture, and/or harassment of any marine mammal, or the attempt at such. The MMPA also imposes a moratorium on the import, export, or sale of any marine mammals, parts, or products within the U.S. The USFWS and NOAA Fisheries are jointly responsible for implementation of the MMPA; USFWS is responsible for the protection of sea otters, and NOAA Fisheries is responsible for protecting pinnipeds (seals and sea lions) and cetaceans (whales and dolphins).

Under Section 101(a)(5)(D) of the MMPA, an incidental harassment authorization may be issued for activities other than commercial fishing that may impact small numbers of marine mammals. An incidental harassment authorization covers activities that extend for periods of not more than 1 year, and that will have a negligible impact on the impacted species. Amendments to the MMPA in 1994 statutorily defined two levels of harassment. Level A harassment is defined as any act of pursuit, torment, or annoyance that has the potential to injure a marine mammal in the wild. Level B harassment is defined as harassment having potential to disturb marine mammals by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering.

**Migratory Bird Treaty Act.** The Migratory Bird Treaty Act (MBTA) was originally passed in 1918 as four bilateral treaties, or conventions, for the protection of a shared migratory bird resource (16 U.S.C. 703–712). The primary motivation for the international negotiations was to stop the “indiscriminate slaughter” of migratory birds by market hunters and others. Each of the treaties protects selected species of birds and provides for closed and open seasons for hunting game birds. The MBTA protects over 800 species of birds, which are listed in the Code of Federal Regulations (50 CFR 10.13). The MBTA prohibits the “take” of any migratory bird or any part, nest, or eggs of any such bird. Under the MBTA, take is defined as pursuing, hunting, shooting, capturing, collecting, or killing, or attempting to do so. Two species of eagles that are native to the United States, the bald eagle (Haliaeetus leucocephalus) and golden eagle (Aquila chrysaetos), were granted additional protection within the United States under the Bald and Golden Eagle Protection Act (BGEPA; 16 U.S.C. 668–668d) to prevent the species from becoming extinct.

**Monterey Bay National Marine Sanctuary.** Monterey Bay is part of the Monterey Bay National Marine Sanctuary (MBNMS), which was established and designated in 1992 for the purpose of resource protection, research, education and public use. The MBNMS is the largest of thirteen marine sanctuaries administered by the United States Department of Commerce National Oceanic and Atmospheric Administration (NOAA) and it extends from Marin County to Cambria, encompassing nearly 300 miles of shoreline and 5,322 square miles of ocean, extending an average distance of twenty-five miles from shore. At its deepest point the MBNMS reaches down 10,663 feet.
(more than two miles) (National Marine Sanctuary Program, 2008). The action area is entirely within the Monterey Bay National Marine Sanctuary.

3.2 California Regulations

**California Endangered Species Act (CESA).** The California Endangered Species Act (CESA) (California Fish and Game Code, Section 2050 et seq.) prohibits the taking of species listed as threatened or endangered under the act, or candidates for listing, except as authorized by California law. Section 2081 of CESA states that take of an endangered, threatened, or candidate species may be authorized by the CDFW if the impacts of the take are incidental to an otherwise lawful activity, are “minimized and fully mitigated,” and do not “jeopardize the continued existence of [the] species.” Any mitigation measures imposed under CESA must be measures “roughly proportional in extent to the impact of the authorized taking on the species.” The only fish species listed under CESA that was evaluated to have moderate or high potential to occur in the action area is Coho salmon (*Oncorhynchus kisutch*) – Central California coast ESU (Endangered).

**California Coastal Act.** In 1972, voters concerned about coastal development, including impacts to public access and coastal resources, passed the California Coastal Zone Conservation Initiative (“Proposition 20”), in turn creating the California Coastal Commission (CCC). This initiative declared the California coastal zone as a distinct and valuable natural resource belonging to all people and existing as a delicately balanced ecosystem, requiring conservation and protection of remaining natural and scenic resource for the coastal zone. As a result, it was determined that, to promote public safety, health, and welfare, and to protect public and private property, wildlife, marine fisheries, other ocean resources, and the natural environment, it was necessary to preserve the ecological balance of the coastal zone and prevent its further deterioration and destruction. The initiative also determined that it is the policy of the state to preserve, protect, and where possible restore the resources of the coastal zone for the enjoyment of the current and succeeding generations. In 1976, the California State Legislature enacted the California Coastal Act, which is the primary law governing the decisions of the CCC. The California Coastal Act of 1976 guides new development in an effort to improve public access to coastal areas. The Coastal Zone encompasses 1.5 million acres of land, stretching from 3 miles at sea to an inland boundary that varies from several blocks in urban areas to as many as 5 mile in less developed areas. The Coastal Zone extends into federal waters under the Federal Coastal Zone Management Act, covering approximately 1,100 miles of California coastline from Oregon to Mexico, including 287 miles of shoreline surrounding nine offshore islands.

The California Coastal Act is designed to encourage local governments to create Local Coastal Programs (LCPs) to govern decisions that determine short-term and long-term conservation and use of coastal resources. LCPs are required to be consistent with the policies of the California Coastal Act in protecting public access and coastal resources within the Coastal Zone. Until the CCC certifies an LCP, the CCC makes the final decisions on all development within a jurisdiction (city or county) within the Coastal Zone. Upon certification of an LCP for a jurisdiction, decisions are handled locally, but can be appealed to the CCC. The city of Capitola adopted a LCP in 1981, which has been revised in 2001 and 2005 (City of Capitola 1981).

**ESHA.** Environmentally sensitive habitat areas (ESHA) are afforded protection under the California Coastal Act in the coastal zone. Section 30107.5 of the Coastal Act defines an “Environmentally sensitive area” as: Any area in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which could be easily disturbed or degraded by human activities and developments. The City of Capitola has an environmentally sensitive habitat (ESH) ordinance, which is intended to protect riparian habitat and monarch habitat from impacts due to development.
California Department of Fish and Wildlife. The potential take of state listed Threatened, Endangered or Rare plant and animal species is regulated by the CDFW and includes Species of Special Concern, Fully Protected Species and Other State Code Provisions. The “Species of Special Concern” list includes species whose breeding populations in California may face extirpation (CDFW 2019a). Although these species have no legal status under the CESA, the CDFW recommends considering these species during analysis of proposed Project impacts to protect declining populations, and to avoid the need to list them as threatened or endangered in the future. These species may “be considered rare or endangered [under CEQA] if the species can be shown to meet the criteria.”

Additionally, the California Fish and Game Code (CFGC) contains lists of vertebrate species designated as “Fully Protected” (California Fish & Game Code 3511 [birds], 4700 [mammals], 5050 [reptiles and amphibians], and 5515 [fish]. According to Sections 3511 and 4700 of the CFGC, which regulate birds and mammals, respectively, a “Fully Protected” species may not be taken or possessed without a permit from the Fish and Game Commission. Incidental take is not authorized under CFGC Section 2081 for species designated as Fully Protected, except for collecting these species for necessary scientific research and relocation of the bird species for the protection of livestock.

Pursuant to Section 3503.5 of the CFGC, it is unlawful to take, possess, or destroy any birds of prey; or to take, possess, or destroy any nest or eggs of such birds. Active nests of all other birds (except introduced species such as rock pigeons, Eurasian collared-doves, house sparrows, and European starlings) are similarly protected under CFGC Sections 3503 and 3513. Disturbance that causes nest abandonment and/or loss of reproductive effort is considered “take” by the CDFW. This statute does not provide for the issuance of an incidental take permit.

3.3 Existing Permits and Biological Opinions Related to the Action

There are no existing permits or Biological Opinions (BO) for the Action Area; however, a Biological Opinion was issued for the management of the Soquel Lagoon Berm, just downcoast from the Action Area.

**Biological Opinion/Incidental Take Statement (2013-9534) for Steelhead and Coho Salmon.** Issued by NOAA Fisheries by letter dated May 3, 2013. Work authorized included annual placement of a sand berm and associated seasonal dewatering of the lower-most 700 feet of Soquel Creek, capture and relocation of any fish species away from the construction area each construction day, use of a flume to redirect stream flows, removal of kelp and seagrass from the lagoon and flume, backfilling residual channel along the seawall east of the berm, grading for a temporary outlet channel parallel to the flume, and regrading of the sand berm in the fall to facilitate natural breaching in the winter. The Biological Opinion also describes maintenance of the flume including filling of voids compacting of sand adjacent to the flume, washing of sand from the flume, and evaluation of structural integrity. The BO describes lagoon management including periodically manipulating the flume inlet to accelerate the transition of the lagoon from brackish to freshwater, provide outmigration passage conditions for smolts and adult steelhead, and prevent flooding in the City. The area of direct impact analyzed in the BO includes approximately 1,000 linear feet along the beach, moving from the northern portion of the beach down south to the breakwater. Indirect effects were analyzed in the upper lagoon area where water would impound earlier than under natural conditions.

**Biological Opinion for Soquel Lagoon Berm Management Project, Santa Cruz, California (8-8-13-F-17).** Issued by USFWS by letter dated May 2, 2013. This BO provides incidental take coverage for the federally endangered tidewater goby. Activities covered under this BO are the same as those described above for the NOAA Fisheries BO.
4 Environmental Setting and Existing Conditions

4.1 General Environmental Setting

The Capitola Wharf is located in the central part of Santa Cruz County, on the central California coast between the cities of Santa Cruz and Watsonville. The Wharf is just west of the mouth of Soquel Creek which empties into the MBNMS after flowing nearly 30 miles from its headwaters at the crest of the Santa Cruz Mountains at the Santa Clara County border.

Jurisdictional wetlands and other waters of the U.S./State are present within the action area, including the tidal wetlands and the aquatic habitats that surround the Wharf. EFH is also present within the action area.

Land cover types are quantified in Table 1 and shown on Figure 2.

**Sandy Beach (Upland).** Sandy beach habitat includes any unvegetated coastal area comprised exclusively of sand. Upland sandy beach area represents the minority of the action area, comprising approximately 1.4 acres.

**Intertidal Sandy Beach (Wetland).** The intertidal zone is located between the highest and lowest tide elevations, comprising approximately 11.6 acres of the action area. Intertidal zones along the central California coast include rocky shores, sandy beaches, coastal marshes, and tidal flats located within estuaries and lagoons. Within the action area, the intertidal is entirely sandy beach. Intertidal sandy beach communities are subject to daily tidal changes that result in highly fluctuating physical regimes in temperature, salinity, and moisture content of the sand. The intertidal can also be subject to high energy wave action.

**Subtidal Coastal Wetland.** Subtidal coastal wetlands are located immediately seaward of intertidal sandy beach habitat and are constantly submerged (Duxbury and Duxbury 1991). Subtidal areas, as well as the intertidal and splash zone areas, occupy the benthic photic zone because sufficient light is present in these zones to support both floating single celled plants as well as benthic plants. Subtidal coastal wetland habitat comprises approximately 427.6 acres, the majority of the action area.

**Developed/Landscaped.** Developed and landscaped areas within the action area include roads, buildings, and ornamental landscaping. These areas provide little or no habitat value. The developed/landscaped land cover comprises approximately 12 acres within the action area.
4.2 Critical Habitat

The USFWS and NOAA Fisheries are required under Section 4 of the FESA to designate critical habitat for federally listed species. Within the action area, critical habitat has been designated for the following federally listed species (Appendix A, B):

- Leatherback sea turtle (*Dermochelys coriacea*) (Federally endangered)
- Green sturgeon (*Acipenser medirostris*) southern Distinct Population Segment (DPS) (Federally threatened)

Designated critical habitat for the Central California Coast DPS of steelhead is located approximately 0.10 miles northeast of the action area in Soquel Creek. Designated critical habitat for tidewater goby is also located approximately 1.8 miles southwest in Corcoran Lagoon and approximately 2.6 miles east in Aptos Creek.

4.3 Essential Fish Habitat

The MSA defines EFH as “those areas and substrate necessary to fish for spawning, breeding, feeding, or growth to maturity.”

Waters in Monterey Bay, including nearby Soquel Creek, are considered EFH for a variety of fish species covered under the Pacific Groundfish Fishery Management Plan, Coastal Pelagics FMP and Pacific Salmon FMP.

4.4 Monterey Bay National Marine Sanctuary

Monterey Bay is part of the MBNMS, which was established and designated in 1992 for the purpose of resource protection, research, education and public use and is the largest of the thirteen marine sanctuaries administered by NOAA. MBNMS updated its 2009 Condition Report, which provides an assessment of ecosystem health, status and trends within four representative areas of the sanctuary for: estuarine (Elkhorn Slough), nearshore (<30 meters in depth), offshore (>30 meters) and the Davidson Seamount (70 miles offshore, southwest of Monterey) (2015). Overall, the nearshore biogenic habitat (which extends from the shoreline boundary out to approximately 30 meters depth), including kelp, algae, and invertebrates are abundant and stable. There has been no introduction of new invasive species; key species are stable or slightly increasing; and water quality risks to human health decreased due to improved sewer infrastructure and non-point source controls. However, the 2015 Condition Report downgraded the eutrophic conditions of sanctuary waters to “fair” due to the increasing nutrient enrichment and proliferation of harmful algal blooms (HABs). Concerns in the nearshore environment include ambient toxicity due to pesticides and pharmaceuticals; sea star declines; and effects of the following activities: sand mining, coastal armoring, inputs of contaminants, and marine debris. In the offshore environment the main concerns are impacts that have been detected due to the Oxygen Minimum Zone caused by acidification, warming and shoaling; pollutants, marine debris, and toxins from HABs found in some key species; impacts to sensitive species from human-caused noise and vessel traffic; long-term impacts of warmer water conditions; and trawling impacts on the benthic habitat (National Marine Sanctuary Program, 2015).

Bottom substrates in the action area are predominantly soft, sandy sediments. Species diversity in the intertidal zone is generally low because organisms are subject to daily tidal fluctuations causing varying wet and dry conditions and fluctuations in temperature and salinity (URS Corporation, May 2013). Common species include polychaete worms (e.g., *Aporionospio* sp., *Mediomastus* sp.), anemones, and oligochaete and nematode worms.
(Ibid.). Kelp forests of Monterey Bay are composed of the giant kelp (*Macrocystis pyrifera*), bullwhip kelp (*Nereocystis luetkeana*), and other red and brown algae (Ibid.). Farther offshore, soft-bottom subtidal areas are characterized by benthic (bottom dwelling) organisms typical of the open-coast soft-bottomed community off much of the California coast (Ibid.).

The open water, or pelagic zone, encompasses the entire water column extending from the surface nearly to the bottom substrate. Many species are associated with open-water habitats over both rocky and sandy substrates, including plankton, invertebrates, and fish. Plankton are generally microscopic plants and animals, free-floating in the open water, and represent the lower levels of the food chain and are important to many marine species, including benthic organisms, fish, and mammals. A variety of pelagic marine invertebrates occur within the MBNMS action area, including squid (*Loligo opalescens*), jellyfish, and shrimp. Fish commonly found in open water in the nearshore areas of MBNMS include anchovies (*Engraulis mordax*) and sardines (*Sardinops sagax*) (URS Corporation, May 2013).
5 Biological Resources

5.1 General Plant and Wildlife Species

Capitola Beach and Monterey Bay provide diverse habitat for a variety of wildlife including special status species. The MBNMS is home to numerous mammals, seabirds, fishes, invertebrates, and algae in a remarkably productive coastal environment. Its natural resources include the nation’s largest contiguous kelp forests, one of North America’s largest underwater canyons and the closest-to-shore, deep ocean environment off the continental United States. It is home to some of the most diverse and productive marine ecosystems in the world, including a vast diversity of marine life, with 33 species of marine mammals, 94 species of seabirds, 345 species of fish, four species of sea turtles, 31 phyla of invertebrates, and more than 450 species of marine algae. During early spring to late summer, upwelling causes nutrient-rich water to rise to the surface. These nutrients in turn are consumed by planktonic organisms which support the entire food chain, giving rise to the incredible diversity in Monterey Bay (SIMoN 2020). The marine habitats in the action area of the Capitola Wharf consist of various intertidal, and open-water habitats.

5.1.1 Vegetation

Vegetation communities are assemblages of plant species defined by species composition and relative abundance, which occur together in the same area. Beach dune vegetation is not present in the action area, as the beach is consistently managed from year to year, and used frequently by residents and tourists throughout the summer. Because the action area encompasses open water and managed beach, neither of which sustain assemblages of plant species, no vegetation communities are expected to be impacted by the Project activities.

5.1.2 Invertebrates

Various invertebrate animals live in the sand and in wracks of decaying sea weed and other detritus and include crustaceans, isopods, and mole crabs (Oakden and Nybakken 1977), as well as other common species such as anemones, and oligochaete and nematode worms (URS Corporation, May 2013). Polychaete worms (e.g., Aporprionospio sp., Mediostisus sp.), and bivalves (i.e. clams, mussels, and scallops) are also regularly present, though typically in low abundances.

5.1.3 Fish

A variety of fish, including multiple species of surfperch, flatfish, rays, and sharks, inhabit or utilize the surf zone. The intertidal zone within and adjacent to the action area is characterized by sandy beach. Four special status species have potential to occur within the action area, including steelhead Central California Coast DPS (federally listed as Threatened), green sturgeon southern DPS (federally listed as Threatened), Chinook Salmon (four ESUs), and Central California Coast Coho salmon (federally listed as Endangered), all of which are detailed in Section 5.2.
5.1.4 Reptiles

Several species of sea turtles have ranges that include the Monterey Bay, these are leatherback, green, olive ridley and loggerhead sea turtles. The leatherback sea turtle (*Dermochelys coriacea*) is a federally-listed endangered species. The leatherback is the largest turtle in the world and they are the only species of sea turtle that lack scales and a hard shell. Leatherbacks are highly migratory, some swimming over 10,000 miles a year between nesting in tropical latitudes and foraging grounds along the Pacific Coast of North America (NOAA Fisheries 2018a). The loggerhead sea turtle (*Caretta caretta*) is a federally-listed endangered species. The North Pacific Ocean DPS occurs in tropical to temperate waters in the Pacific Ocean. Loggerhead sea turtles migrate from nesting grounds in Japan and Australia to feeding grounds located along the west coast from central to North America. The closest known loggerhead nesting beaches in the North Pacific Ocean are located in Japan (NOAA Fisheries and USFWS 2007). The green sea turtle (*Chelonia mydas*) is a federally-listed threatened species. The Eastern Pacific DPS ranges from Baja California to southern Alaska. This species forages in the open ocean when migrating as well as shallow waters of lagoons, bays, estuaries, mangroves, eelgrass, and seaweed beds. They are herbivorous and feed primarily on seagrasses and algae. It is a regular visitor in the waters off the southwest coast of the United States. Residents occur in the San Gabriel River, Long Beach. The closest known nesting occurrences are in Mexico (NOAA Fisheries and USFWS 1998b). The olive ridley sea turtle (*Lepidochelys olivacea*) is a federally-listed threatened species. Olive ridley sea turtles occur worldwide in tropical and warm temperate ocean waters. In the eastern Pacific, this species distribution ranges from Southern California to Northern Chile. Olive ridley sea turtles are mostly pelagic but will also inhabit coastal areas. As a highly migratory species, they are encountered in U.S. waters as they travel between nesting and foraging habitats (NOAA Fisheries 2018b).

5.1.5 Coastal and Migratory Birds

The greater Monterey Bay is an important stop-over point for migratory birds and 94 species of native and non-native seabirds are known to occur regularly in Monterey Bay. Along the continental shelf, the dominant species are sooty shearwaters (*Ardea grisea*), western grebes, Pacific loon (*Gavia pacifica*), brown pelican, and western gulls. During summer to fall, species such as black-footed albatross (*Phoebastria nigripes*), ashy storm-petrel (*Oceanodroma homochroa*), and Scripps’s murrelet (*Synthliboramphus scrippsi*) can be found foraging over deeper waters of Monterey Bay (URS Corporation May 2013). An important habitat associated with Monterey Bay is the waterbird foraging area off the shore below Depot Hill between the jetty and the mouth of Tannery Gulch which is frequented by numerous bird species. The shoreline between the rock groin of Capitola Beach and the mouth of Tannery Gulch is frequented by numerous shorebirds during low tide such as sanderling (*Calidris alba*), willet (*Tringa semipalmata*), and black turnstone (*Arenaria melanocephala*). Many other waterbirds, including cormorants, gulls and the delisted California Brown Pelican, commonly forage immediately offshore in the waters adjacent to the kelp beds.

5.1.6 Marine Mammals

Marine mammals, including California sea lions and Pacific harbor seals haul out on isolated beaches and sand spits throughout Monterey Bay. The southern sea otter (*Enhydra lutris nereis*), also known as the California sea otter, predominantly inhabits nearshore environments and have been observed near the action area, and potentially within the action area. Southern sea otters forage for crustaceans and bivalves in the surf zone during high tide. Pacific harbor seals (*Phoca vitulina richardii*) and California sea lions (*Zalophus californianus*) are also routinely observed outside the action area in the surf zone, although usually as single individuals. No haul outs for either species are known to occur within the action area, and they are not documented as hauling out on the Wharf structure.
Several additional marine mammal species are known to occur within or have the potential to occur in Monterey Bay, and include the Steller sea lion (*Eumetopias jubatus*), northern fur seal (*Callorhinus ursinus*), northern elephant seal (*Mirounga angustirostris*), gray whale (*Eschrichtius robustus*), blue whale (*Balaenoptera musculus musculus*), humpback whale (*Megaptera novaeangliae*), killer whale (*Orcinus Orca*), harbor porpoise (*Phocoena phocoena*), and common bottlenose dolphin (*Tursiops truncatus*) (SIMoN 2018). The northern fur seal migrates in offshore waters but is rarely seen in nearshore areas.

A CDFW study found only five species of marine mammals in nearshore (<1 km [0.6 mile]) waters of Monterey Bay, which would include part of the action area. These were, in order of abundance: California sea lion, harbor porpoise, sea otter, harbor seal, and bottlenose dolphin; gray whales also were observed (Henkel and Harvey 2008). Seasonal abundance of harbor porpoise in the nearshore waters was greatest during winter, pinnipeds were most abundant during autumn, and sea otters were most abundant during spring and autumn (SIMoN 2018).

### 5.2 Special-Status Species

Biological resources within and adjacent to the action area were investigated through review of pertinent scientific literature and databases. Evaluation of species records and occurrences in the U.S. Geologic Survey (USGS) Soquel quadrangle that encompasses the action area and included surrounding six quadrangles, including Felton, Laurel, Loma Prieta, Santa Cruz, Watsonville West, and Moss Landing to determine target species (CDFW 2019b; USFWS 2020). In addition, Dudek’s knowledge of biological resources and regional distribution of each species, as well as the unique habitat characteristics of the action area was evaluated to determine the potential for various special-status species to occur. A full list of special status species with potential to occur within the action area is presented in Table 2. All species determined to have a high or moderate potential to occur within the action area are discussed further below.

<tr>
<td>Chinook salmon ESU</td>
<td>Tidewater Goby</td>
<td>FE/SE</td>
<td>This goby inhabits lagoons formed by streams running into the sea. The lagoons are blocked from the Pacific Ocean by sandbars, admitting salt water only during particular seasons, and so their water is brackish and cool. The tidewater goby prefers salinities of less than 10 parts per thousand (ppt) (less than a third of the salinity found in the ocean) and freshwater conditions for nesting and is thus more often found in the upper parts of estuaries, near their inflow and throughout freshwater converted lagoons.</td>
<td>Low: Adults may forage in the lagoon habitat of nearby Soquel Creek lagoon, but are highly unlikely to occur in the action area. Tidewater gobies may enter marine environments only when flushed out of lagoons, estuaries, and river mouths by normal breaching of the sandbars following storm events (USFWS 2005).</td>
</tr>
<tr>
<td>Spirinchus thaleichthys</td>
<td>Longfin smelt</td>
<td>FC/ST</td>
<td>Aquatic, estuary</td>
<td>Low: This species is typically found in open waters of estuaries which is not present within the action area, but have been found in marine environments, and was observed in Moss Landing Harbor in 1993 (CDFW 2019b).</td>
</tr>
<tr>
<td>Thaleichthys pacificus</td>
<td>Eulachon</td>
<td>FT/None</td>
<td>Found in Klamath River, Mad River, and Redwood Creek and in small numbers in Smith River and Humboldt Bay tributaries</td>
<td>Low: This species was observed directly adjacent to the action area at the mouth of Soquel Creek around 1911 (CDFW 2019b), but has not been recorded in the vicinity since.</td>

**Status Key:**
- Federal: BCC = USFWS bird of conservation concern
  - FE = federal endangered
  - FT = federal threatened
- State: SSC = California species of special concern
  - FP = fully protected
  - SE = California endangered
  - ST = state threatened
  - WL = watch list (Shuford and Gardali 2008)

Federally listed species with high potential to occur in the action area include green sturgeon (*Acipenser medirostris*, Threatened), steelhead trout Central Coastal California DPS (*Oncorhynchus mykiss*, Threatened), and southern sea otter (*Enhydra lutris nereis*, Threatened). Federally listed species with moderate potential to occur in the action area include coho salmon Central California coast ESU (*Oncorhynchus kisutch*, Endangered), chinook salmon Central Valley spring-run ESU (*Oncorhynchus tshawytscha*, Threatened), chinook salmon California Coastal ESU (*Oncorhynchus tshawytscha*, Threatened), and marbled murrelet (*Brachyramphus marmoratus*, Endangered [nesting]).

There is designated critical habitat for leatherback sea turtle (*Dermochelys coriacea*, Endangered) and green sturgeon (*Acipenser medirostris*) southern DPS (Federally threatened) within the action area. These critical habitat areas are not specific to the project area; for example, the entirety of Monterey Bay out to 110 fathoms depth is designated critical habitat for green sturgeon.

### 5.2.1 Steelhead (Central California Coast Distinct Population Segment)

Steelhead (*Oncorhynchus mykiss*), the anadromous form of rainbow trout, has been divided by NOAA Fisheries into distinct population segments (DPSs) along the Pacific coast based upon genetic similarities and watershed boundaries. The Central Coastal California steelhead DPS, a federally listed threatened species, occurs in river basins from the Russian River to Aptos Creek (Moyle 2002). Although variation occurs in coastal California, steelhead usually live in freshwater for one to two years in central California, then spend an additional one to three years in the ocean before returning to their natal stream to spawn. Recently emerged, small steelhead fry rear in quiet stream edgewater habitat and gradually move into portions of pools and riffles as they grow larger. Central coast steelhead juveniles commonly rear at summer water temperatures of 16-21 degrees C. They can survive in water up to 27 degrees C with saturated dissolved oxygen conditions and a plentiful food supply. Adult Central Coastal California steelhead typically migrate from the ocean to freshwater between December and April, peaking...
in January and February (depending on stormflow patterns), and juveniles migrate as smolts to the ocean primarily from February through May but as late as June, with peak emigration occurring in April and May.

Steelhead are present in the nearby Soquel Creek Lagoon and watershed according to annual stream surveys (D.W. Alley & Associates 2004; D.W. Alley & Associates 2012; D.W. Alley & Associates 2015). Each summer a sand berm is constructed at the mouth of the creek to create and manage a lagoon within the City of Capitola. The lagoon provides good habitat for juvenile steelhead and has been estimated to support as many as 7,000 large juvenile steelhead during a summer in 2008, though more recent counts estimate population size of 237 in 2016 and 259 in 2017) (D.W. Alley & Associates 2015, 2018). When natural connectivity is re-established in the fall between the lagoon and Pacific Ocean, is it presumed that steelhead could be migrating and/or foraging in the action area.

5.2.2 Central California Coast Coho Salmon Evolutionary Significant Unit (ESU)

Central California Coast Coho salmon are listed as endangered under the ESA (70 FR 37160) and the CESA. The Soquel Creek Watershed has historically supported Coho salmon (Oncorhynchus kisutch), although Coho are believed extirpated since 1992 (Santa Cruz County Resource Conservation District 2003). The Central California Coast Coho Salmon is a federally-listed endangered species that occurs from Punta Gorda in Northern California, south to, and including, the San Lorenzo River and Soquel Creek that flows into Monterey Bay.

Coho salmon in California generally exhibit a relatively simple three year life cycle. Adult salmon typically begin the immigration from the ocean to their natal streams after heavy late-fall or early winter rains breach the sand berm at the mouths of coastal streams (Sandercock 1991, as referenced in NOAA Fisheries 2013). Immigration continues into March, generally peaking in December and January, with spawning occurring shortly after arrival at the spawning ground (Shapovalov and Taft 1954, as referenced in NOAA Fisheries 2013). Along the Central Coast, Coho salmon typically spend one growing season in freshwater (smolting after their first year) and two growing seasons in the ocean before returning to their natal streams to spawn. Coho salmon smolts migrate to the ocean from March through June, peaking in April and May. Juvenile coho salmon prefer well shaded pools at least 1 meter deep with dense overhead cover; abundant submerged cover composed of undercut banks, logs, roots, and other woody debris; and preferred water temperatures of 12-15 degrees C (McMahon 1983), but not exceeding 22-24 degrees C (NOAA Fisheries 2013) for an extended time period.

Coho salmon historically have occurred in the nearby Soquel Creek. There is record of a confirmed capture of an adult Coho salmon in 1992 in Soquel Creek (D.W. Alley & Associates 2004). Additionally, juvenile Coho salmon were detected at one sampling site by D.W. Alley & Associates in Soquel Creek during the fall of 2008 (D.W. Alley & Associates 2009; NOAA Fisheries 2013), and in response to this detection and other factors their range was extended to include Soquel Creek in 2012 (76 FR 2011). Juvenile Coho salmon were again detected in Soquel Creek at two sampling sites in fall 2015 (D.W. Alley & Associates 2016). Evidence of Coho salmon in the nearby Soquel Creek indicate that it is likely this species is migrating through or foraging within the action area.

5.2.3 Chinook Salmon

Chinook salmon historically ranged from the Ventura River in California to Point Hope, Alaska, on the eastern edge of the Pacific and in the western portion of the Pacific Ocean from Japan to Russia. Four Chinook salmon ESUs have potential to migrate through and forage in Monterey Bay: California Coastal (federally listed threatened species), Sacramento River Winter-Run (state and federally-listed endangered species), Central Valley Spring-Run (state and
federally-listed threatened species), and Central Valley Fall/Late Fall-Run (state and federal Species of Special Concern). Chinook salmon have a relatively complex life history that includes spawning and juvenile rearing in rivers followed by migrating to saltwater to feed, grow, and mature before returning to freshwater to spawn. They are vulnerable to many stressors and threats including blocked access to spawning grounds and habitat degradation caused by dams and culverts.

5.2.4 Green Sturgeon

Green Sturgeon (*Acipenser medirostris*). Green sturgeon southern DPS is a federally-listed threatened species. Telemetry data and genetic analyses suggest that Southern DPS green sturgeon generally occur from Graves Harbor, Alaska to Monterey Bay, California (NMFS 2015). Green sturgeon are anadromous fish that spend most of their lives in saltwater, and return to spawn in freshwater. As adults, green sturgeon migrate seasonally along the West Coast. Subadult and adult North American green sturgeon spend most of their life in the coastal marine environment. They are a long-lived, slow-growing fish. They are vulnerable to many stressors and threats including blocked access to spawning grounds and habitat degradation caused by dams and culverts (NMFS 2015). Tagging data indicate that green sturgeon typically occupy depths of 20-70 m while in marine habitats and make rapid vertical ascents while in marine environments, often at night. The entire Monterey Bay up to a depth of 110 feet was designated as critical habitat for green sturgeon by NOAA Fisheries in 2009. The action area is located within designated critical habitat for this species. Green sturgeon may pass through the area during migration to spawn in the Sacramento, Feather and Yuba Rivers, and when they return to the ocean.

5.2.5 Southern Sea Otter

The southern sea otters (*Enhydra lutris nereis*) is a federally-listed threatened species and also is protected by the MMPA. USFWS is responsible for the protection of sea otters. Approximately 16,000 to 18,000 sea otters were formerly distributed along the California coastline. After extensive harvesting in the 18th and 19th centuries, less than 100 sea otters remained off the isolated coastline of Big Sur, California. Approximately 2,865 individuals now exist in the southern sea otter range, and they have expanded their range north of Santa Cruz to about Half Moon Bay. In Monterey Bay, the highest densities of sea otters have been recorded in the southern part of the bay, near Pacific Grove (Tinker et al. 2013). Due to their consumption of large quantities of marine invertebrates, sea otters tend to be in nearshore areas, which could make them susceptible to disturbance with nearshore construction projects (Tinker et al. 2013). There are kelp forests, a known habitat for this species, as mapped by CDFW (2011). As a coastal species, sea otters are also particularly sensitive to pollution, toxins, and land derived pathogens (Tinker et al. 2013).

5.2.6 Marbled Murrelet

The marbled murrelet (*Brachyramphus marmoratus*) are live along the Pacific Coast from central California to Alaska and nest in old growth forests. Santa Cruz County is at the southern extent of their range. They are federally and state-listed as endangered during the nesting season. The breeding range of the marbled murrelet in the Santa Cruz Mountains encompasses 181,000 acres, and is found in the northwest quarter of the mountain range from Santa Cruz north to San Francisco and inland as far as the summit ridge (Halbert and Singer 2017). At-sea bird counts are currently the best available measure of population size, with the current estimate of population size likely within the range of 400–600 birds (ibid). There is no nesting habitat for the species within the action area, though nesting marbled murrelets could forage within the action area during nesting season.
5.2.7 Osprey

The osprey (*Pandion haliaetus*) is ranked as a CDFW Watch List species and generally occurs around ocean shores, bays, freshwater lakes, and streams. This species builds large nests within 15 miles of good foraging habitat (CDFW 2019b). The ocean and lagoon habitat within and adjacent to the action area provide suitable foraging habitat for this species, although it is not expected to nest within the action area.

5.2.8 Brant

The brant (*Branta bernicla*) is a California species of special concern which typically requires shallow, protected marine waters with intertidal eelgrass beds which makes up the majority of their diet. Brant often feed close to mudflats, sandbars, or spits used as gritting sites (CDFW 2019b). The marine and estuarine habitat within and adjacent to the action area provide adequate wintering and foraging habitat for this species.

5.3 Species Protected Under the Marine Mammal Protection Act

In addition to the special-status marine mammal species identified in the preceding section, other species are protected under the MMPA. Species that are not listed under the FESA or CESA but are protected under the MMPA that occur or have a high potential to occur in the action area include Pacific harbor seals (*Phoca vitulina richardii*), California sea lions (*Zalophus californianus*), harbor porpoises (*Phocoena phocoena*), common bottlenose dolphins (*Tursiops truncatus*), and gray whales (*Eschrichtius robustus*). Northern elephant seals (*Mirounga angustirostris*) and Northern fur seal (*Callorhinus ursinus*) have a moderate potential to occur in the vicinity of the action area.

5.3.1 Pacific Harbor Seal

The Pacific harbor seal (*Phoca vitulina richardii*) is protected under the MMPA and has a high potential to occur in the action area. Harbor seals are nonmigratory, and can be found along shorelines and in estuaries throughout North America. Pacific harbor seals use Monterey Bay year-round, where they engage in limited seasonal movements associated with hauling out, foraging, and breeding activities. Harbor seals forage in shallow, intertidal waters on a variety of fish, crustaceans, and a few cephalopods (e.g., octopus). They also consume benthic organisms and schooling fishes. Harbor seals haul out in groups ranging in size from a few individuals to several hundred. Habitats used as haul-out sites include tidal rocks, bayflats, sandbars, and sandy beaches. They are generally unable to haul out on elevated structures such as the Wharf supports, and are not documented to do so. The numbers of harbor seals occupying the action area are likely to be highest during late summer, fall and winter, outside of breeding (March May) and molting (June July) seasons. Individuals that are not sexually reproductive may remain near the Wharf later into the spring, until molting season. In an unpublished study of harbor seal prey base, harbor seals using the San Lorenzo River were found to use the river as their haul-out exclusively, foraging in the ocean and returning during the night when disturbances were at a minimum (Weise, M. personal communication, 2009 as cited in Caltrans 2015b). Nearby known haulouts for the eastern Pacific harbor seal include Pleasure Point in Live Oak; the Cement Boat at Seaciff State Beach in Aptos; Table Rock, off Wilder State Park; as well as numerous other sites along the north coast from Wilder State Park to Año Nuevo State Park (NOAA Fisheries 2015).
5.3.2 California Sea Lion

The California sea lion (Zalophus californianus) is protected under the MMPA and has a high potential to occur in the action area. California sea lions breed in Southern California and along the Channel Islands. On occasion, sea lions will pup on Año Nuevo Island in San Mateo County to the north. After the breeding season in Southern California, males migrate north up the Pacific coast and into Monterey Bay. The largest populations of sea lions are on Año Nuevo. Sea lions can be observed resting on offshore rocks throughout MBNMS. Some sea lions become accustomed to human environments and haul out on docks and piers, but this does not appear to be the case at Capitola Wharf.

5.2.3 Northern Elephant Seal

Northern elephant seals (Mirounga angustirostris) are protected under the MMPA and have a moderate potential to occur within the action area. During winter months, northern elephant seals travel through the MBNMS on their way to and from breeding areas. Most elephant seals breed on the Channel Islands, while some travel as far south as Baja California. During the breeding season, elephant seals congregate at Año Nuevo and Piedras Blancas. Año Nuevo Island, the closest colony to the action area, supports a large elephant seal breeding colony, which researchers at UC Santa Cruz have monitored and studied since its inception in 1968. Elephant seals began pupping and breeding on the mainland at Año Nuevo, and since then, several other mainland colonies have developed. At Año Nuevo, every year up to 10,000 elephant seals return to breed, give birth, and molt their skin amongst the dunes and beaches. Piedras Blancas has the largest mainland colony of northern elephant seals, with more than 14,000 individuals during the peak season (January to March).

5.2.4 Northern Fur Seal

Northern fur seals (Callorhinus ursinus) are protected under the MMPA and have a moderate potential to occur within the action area. In spring, northern fur seals migrate through the MBNMS to breeding areas in southern California and Baja California, including the Channel Islands National Marine Sanctuary. In August and September, they take advantage of late summer productivity along the central coast to travel to northern feeding areas. The northern fur seal migrates in offshore waters and is rarely seen near land (generally found tens or hundreds of kilometers from shore). However, in 2005, many individuals were within 10 to 20 kilometers of the central California coast during July 2005. It is possible that their prey was less available in offshore waters, leading them to move closer to shore in search of food. Similar patterns have been observed in the past for some whale species, which were found to concentrate in Monterey Bay when offshore productivity was low, such as during the 1997-1998 El Niño event (MBNMS 2006).

5.3.5 Harbor Porpoise

The harbor porpoise (Phocoena phocoena) is protected under the MMPA and has a high potential to occur in the action area. In the Pacific, harbor porpoise are found in coastal and inland waters from Point Conception, California to Alaska and across to Kamchatka and Japan. Harbor porpoise appear to have more restricted movements along the western coast of the continental U.S. than along the eastern coast, and are not migratory on the west coast (NOAA 2001). These small porpoises (5-6 feet) usually travel in small groups close to shore, but are cryptic and tend to stay away from boats. Harbor porpoise occur in greater densities in nearshore waters of northern Monterey Bay which may be because abundance of northern anchovy, an important prey of harbor porpoise, was significantly
greater north of the Pajaro River than to the south (Henkel and Harvey, 2008). Their foraging success is enhanced in turbid water where they can easily locate prey but their prey cannot see them.

5.2.6 Common Bottlenose Dolphin

The common bottlenose dolphin (*Tursiops truncatus*) is protected under the MMPA and has a high potential to occur in the action area. With a submarine canyon and its location within a major upwelling zone, Monterey Bay is an extremely rich and productive area, which provides food for thousands of dolphins. Of the six dolphin species that occur in Monterey Bay either year-round or seasonally, bottlenose dolphins are the only species that inhabits the shallow waters, usually just outside the surf line. They were first noticed in Monterey Bay during the 1982-1983 El Niño, and some of the dolphins were known individuals that had previously lived in warmer southern California waters. They are currently year-round residents (200-300 in population, with some moving in and out of the area) that travel in small groups (fewer than 15) and are often observed from shore throughout the inner bay (Monterey Bay National Marine Sanctuary, 2005). Monterey Bay is an important area for dolphins. Their frequent occurrence and high abundance suggests that this rich region provides a predictable and abundant food source throughout the year.

5.2.7 Gray Whale

Gray whales (*Eschrichtius robustus*) are protected by the MMPA and have a high potential to occur in the action area. Gray whales migrate between summer feeding grounds in the Bering and Chukchi seas, between Alaska and Russia, and winter calving areas in Baja California, Mexico. Gray whales move through Monterey Bay while migrating from southern winter calving areas to northern summer feeding grounds. They migrate north from mid-February through May, usually within three miles of shore. Most adult and juvenile whales pass Monterey on their way to Alaska by mid-April. Females heading north with their new calves pass Monterey in April and May. The population migrates south in the fall. During the southern migration, the whales tend to stay much farther offshore than during the northern migration, when they are regularly observed from West Cliff Drive. They are benthic feeders that swim along the bottom on their sides while scooping up sediment containing benthic invertebrates—primarily amphipods. The sediment and benthic amphipods are filtered through their baleen plates (URS Corporation, May 2013).

5.4 Managed Species

The tidal aquatic habitats within and adjacent to the action area are considered EFH by NOAA Fisheries for a species assemblage that includes sharks, rockfish, roundfish and flatfish. NOAA Fisheries consults with federal action agencies under the MSA in a process similar and often parallel to the Section 7 FESA consultation. Because the Project would occur within designated EFH, consultation with NOAA Fisheries under the MSA may be necessary and would be initiated by the USACE during the permitting process for the proposed Project.

Fisheries management plans (FMPs) are extensive documents that are regularly updated. The goals of FMPs include the development and sustainability of an efficient and profitable fishery, optimal yield, adequate forage for dependent species, and long-term monitoring. The action area overlaps portions of three FMPs: the Coastal Pelagic FMP covering 5 species, the Pacific Groundfish FMP covering 9 species, and the Pacific Coast Salmon FMP covering 3 species. Other species that occur in the region and are included in each of the applicable FMP for the action area include longfin smelt (*Spirinchus thaleichthys*), a CESA threatened species and FESA species, and eulachon (*Thaleichthys pacificus*) a FESA threatened species (NOAA 2018b). The species covered by each FMP are detailed in the Table 3 below.
The Project is located within an area designated as EFH in the Pacific Coast Groundfish Fishery Management Plan for the California, Oregon, and Washington Groundfish (PFMC 2019). This FMP manages 85 species over a large and ecologically diverse area extending from the Pacific Coast border with Mexico to the Pacific Coast border between Washington and Canada (PFMC 2019). Because the EFH determination from this FMP addresses such a large number of species, it covers areas out to 3,500 meters (11,483 feet) in depth, shoreline areas up to the Mean Higher High Water line, and areas up coastal rivers where ocean-derived salinity is at least 0.5 parts per thousand during average annual low flows.

The FMP also identifies Habitat Areas of Particular Concern (HAPCs), considered high-priority areas for conservation, management, or research because they are rare, sensitive, stressed by development, or important to ecosystem function. The HAPC designation does not necessarily mean additional protections or restrictions are afforded an area, but they help to prioritize and focus conservation efforts. Current HAPC types in the FMP are estuaries, canopy kelp, seagrass, rocky reefs, and “areas of interest” (a variety of submarine features, such as banks, seamounts, and canyons). The action area includes the HAPC canopy kelp (Figure 2), primarily to the east of the Wharf.

The Project is also located within an area that is designated as EFH in the Pacific Coast Salmon Management Plan.

Notes: A = Adult; J = Juvenile; L = Larvae

5.4.1 Coastal Pelagics FMP

EFHs for Coastal Pelagics are defined as all marine and estuarine waters from the shoreline of the coasts of California, Oregon, and Washington offshore to the limits of the Exclusive Economic Zone and above the thermocline. As of 2018, the Coastal Pelagic FMP covered four fish species (northern anchovy [Engraulis mordax], jack mackerel [Trachurus
symmetricus], Pacific mackerel [Scomber japonicus], and Pacific sardine [Sardinaops sagax caerulea]) (PFMC 2018). Pacific herring (Clupea pallasii pallasii) and jacksmelt (Atherinopsis californiensis) are also included in the Coastal Pelagic FMP as Ecosystem Component Species.

Northern anchovy is the only managed species under the Coastal Pelagic FMP that may be present in the action area. The northern anchovy historically ranged from the Queen Charlotte Islands, British Columbia, in Canada, south to Cabo San Lucas, Baja California, Mexico. Larvae and juveniles are often abundant in nearshore areas and estuaries with adults being more oceanic; however, adults may also be found in shallow nearshore areas and estuaries (Emmett et al. 1991). Anchovy are non-migratory but do make extensive inshore–offshore and along-shore movements.

5.4.2 Pacific Groundfish FMP

The Pacific Groundfish FMP for all Fishery Management Unit species is identified as all waters and substrate with depths that are less than or equal to 3,500 meters to the mean higher high water level (MHHW), or the upper extent of saltwater intrusion, defined as upstream and landward to where ocean-derived salts measure less than 0.5ppt during the period of average annual low flow. There are 89 fish species included in the Pacific Groundfish FMP. EFH for Pacific groundfish include all waters off California and in embayment’s between Mean Higher High Water and depths to 11,483 feet (Appendix C).

The most abundant Pacific groundfish group present in the nearshore areas of Capitola Beach and the Soquel Creek Lagoon was the flatfish. In the flatfish group, English sole (Parophrys vetulus), starry flounder (Platichthys stelliger), and sand sole (Psettichthys melanosticetus) have been observed. The only other groundfish observed and/or caught was Pacific staghorn sculpin (Leptocottus armatus), the threespine stickleback (Gasterosteus aculeatus), and prickly sculpin (Cottus asper) (D.W. Alley & Associates 2004).

5.4.3 Pacific Coast Salmon Management Plan

The Pacific Coast Salmon FMP covers the coastwide aggregate of natural and hatchery salmon species that is contacted by salmon fisheries in the exclusive economic zone off the coasts of Washington, Oregon, and California (Appendix D).

Important managed, protected, or special-status Coastal Pelagic zone species that occur in the action area, either seasonally or year-round, include steelhead (central California coast DPS and south-central California coast DPS) and Coho salmon. Central California coast distinct population segment (DPS) steelhead trout are listed under FESA as threatened and as a species of special concern under CESA. Coho salmon (ESU) are currently protected under both the FESA and CESA as endangered. South-central California coast DPS steelhead are listed under FESA threatened, referring to runs in coastal basins from the Pajaro River south to, but not including, the Santa Maria River, which is outside of the action area.
6 Potential Project Impacts

This section analyzes potential impacts to coastal and marine biological resources, including special-status species, from implementation of the proposed Project. Impact analysis is focused on potential temporary impacts to the action area: primarily water quality issues related to pile installation and removal, and noise or vibration impacts from the installation of piles into marine waters.

6.1 Impacts to Water Quality

Water quality impacts from the proposed Project could result from activities occurring in or immediately adjacent to the intertidal and beach areas, which include accessing the Wharf repair and widening areas, staging of equipment on the Wharf and potentially on a barge, dust and debris associated with the repair activities, and placement of new and repair piles.

In-water work by pile driving can suspend sediments in the water column, which can lower dissolved oxygen, increase salinity, increase concentrations of suspended solids, and possibly release chemicals present in the debris particulates into the water column as the tide encroaches into the area of construction. The concentration of suspended sediments would vary on the timing of the repair activities in association with the tide, the quality of the work performed, the maintenance of the Best Management Practices (BMPs) and the care of the operator. In all cases, increased turbidity levels would be relatively short-lived and generally confined to within a few hundred yards of the repair activity. Further, in-water work would occur within intertidal and shallow subtidal areas, which regularly experience turbidity from wave action on the sandy shoreline. Therefore, increases above baseline turbidity levels would be less than in a low wave energy environment.

Oils and similar substances from construction equipment can contain a wide variety of polycyclic aromatic hydrocarbons (PAHs), and metals. Project construction equipment is not anticipated to enter the water. Spill containment and remediation material would be nearby, and vehicles would not be fueled or otherwise serviced adjacent to the bay. Due to these measures, accidental spills would be minimized and toxic chemical contamination of the action area would be minimized.

Pile coatings have the potential to cause impacts to marine species from potential leaching of contaminants from timber piles into the marine environment. While the new piles supporting the expansion area would be fiberglass and would not have coatings, replacements for damaged Wharf piles would be fiberglass, or ACZA-treated timbercoated with a polyurea compound.

ACZA is a wood preservative derived from metal compounds and arsenic that preserve the wood from decay from fungi, wood attacking insects, including termites, and marine borers through their toxic properties. These metal-arsenate chemicals are toxic and can produce adverse impacts when used where they can be leached from pilings into the aquatic environment (California Coastal Commission 2012). Overwater uses of treated wood products can also contribute contaminants into the aquatic environment; overwater copper-treated products are expected to leach most of their contamination during the first year as a result of rainfall (Ibid.). The primary concern is potential effects of copper concentrations on Pacific salmonids, many of which are managed under the FESA and EFH provisions of the Magnuson-Stevens Fishery Conservation and Management Act (NOAA 2009).
Generally, concern regarding use of treated wood piles (either creosote or copper-treated) arises in estuarine and lake environments where current velocities are low and local concentrations surrounding the pilings can become elevated (NOAA 2009). In the Pacific subtidal and intertidal zones, relatively high current velocities ensure quick and constant mixing. Available information also indicates that acute copper toxicity (i.e. mortality) typically decreases with increasing salinity (Eisler 2000, Stratus 2006a as cited in NOAA 2009).

To eliminate risk of chemicals affecting water quality and to provide protection, methods to provide an inert barrier between the chemical treated timber and the water have been developed over the past 30-50 years, including pile wrapping, pile coating, and use of fiberglass shells. Pile coatings are a polyurea spray applied in a controlled factory. They adhere to the pile timber and can be applied in various thickness build ups. These are a more recent development in the past 10-15 years. Earlier formulations (cured brown in color) were subject to tearing and loss of adhesion to the timber. However, recent formulations (cured black in color) developed in the past 5-8 years have improved adhesion. The coating provides containment of chemical treatment of the wood piles and provides a barrier to organisms.

Although the polyurea spray coating is expected to minimize the possibility of copper leaching from the ACZA treated piles, the polyurea coating could be physically damaged or degrade and expose the underlying ACZA coating. However, even uncoated exposed copper-treated pilings leach relatively quickly, reaching low exposure levels in a matter of days to several weeks, depending mainly on formulation. For in-water uses, the highest leaching occurs in the first few days. Therefore, if the polyurea coating is damaged and exposes the ACZA coating, copper levels would be diluted quickly away from the piling, the elevated levels would drop substantially over a few days, and potentially sensitive salmonids, if present, would avoid any locations that happen to have elevated copper. However, routine inspection and monitoring for damaged or deteriorated piles would allow for replacement.

Metals leached into sediments near copper-treated wood in aquatic environments have been found to accumulate in benthic and epibenthic organisms (Weis and Weis 2004 as cited in NOAA, 2009). Other animals can acquire elevated levels of copper indirectly through trophic transfer, and may exhibit toxic effects at the cellular level (DNA damage), tissue level (pathology), organism level (reduced growth, altered behavior and mortality) and community level (reduced abundance, reduced species richness, and reduced diversity) (Weis et al. 1998, Weis and Weis 2004, Eisler 2000 as cited in NOAA, 2009). However, effects decrease after the wood has leached for a few months (Weis and Weis 2004 as cited in NOAA, 2009). Weis and Weis (2004) determined that concentrations of copper in sediments near dock pilings, in moderately flushed areas, did not show accumulation of metals. The waters beneath the Wharf are highly flushed due to wave action.

Best Management Practices (BMPs) are recommended by NOAA (2009) as a way to reduce risk to FESA-listed species and EFH from treated pilings, and would be followed during implementation of the proposed maintenance activities. These BMPs include 1) selecting wood products that have been third-party verified as containing no more than the minimum level of pesticide needed for the use; 2) wrapping or coating the pilings to form a physical barrier between the leachable material and the aquatic environment (such as the polyurea coating proposed for the project); 3) timing installation to avoid times when sensitive species might be present in the action area (such as avoiding April through July when juvenile salmon might be moving from estuaries to the open ocean); and 4) employing construction practices that avoid input of sawdust or other treated wood debris into the environment.

Models used by NOAA Fisheries indicate that installation of 100 or less uncoated copper-treated piles at current velocities of 10 cm/sec or more, are not likely to result in problematic water column concentrations, and thus, 100 uncoated copper-treated pilings has been used as the threshold recommended to trigger a site-specific risk assessment (NOAA, 2009). However, with pile coating, such as that proposed for replacement piles at the Wharf.
potential leaching into the marine environmental would be avoided. Specifically, timber piles treated with a polyurea compound that is designed to encapsulate treated timber products will prevent toxins from leaching into the environment, and this coating system has been used for encapsulating ACZA-treated piles. This type of protection is now in wide usage on treated timbers and has been approved by regulatory agencies throughout California. Some locations include Stearns Wharf in Santa Barbara, Coast Guard Wharf in Alameda and Trinidad Pier in Humboldt County. Provided that coating remains intact, copper leaching from the ACZA piles would not be expected to occur. The NOAA Fisheries models also assume that all pilings would be installed in one event; whereas implementation of the replacement piles as part of routine maintenance would include several smaller installations. This would further reduce any acute effects of new pilings. Therefore, placement of pilings would result in less than significant impact to special-status aquatic species.

6.2 Physical Disturbance of Marine Organisms

Under the Project, most of the piles would be placed in sandy bottom areas where no existing piles are located. During installation, benthic sediments would be temporarily disturbed in the immediate area of pile installation; installation is estimated to take approximately 15-30 minutes per pile. This may result in temporary discharge of sediments into already turbid surface waters, which could cause a very minor increase in the water’s turbidity in the action area on a temporary basis. Disturbance of benthic habitat would likely cause both listed and non-listed species of fish, foraging seabirds, and marine mammals to avoid the immediate construction area and areas of increased turbidity during pile installation. Any sediment in the water column would not be expected to be substantial given the temporary nature of the construction disturbance and that sediments are predominantly sandy; sand particles tend to settle quickly and do not generate large or long-lasting sediment plumes (URS Corporation, May 2013). Because marine organisms would be expected to avoid the immediate construction area due to temporarily increased turbidity limited to the immediate construction zone, pile installation would not have a substantial adverse effect on special-status species that occur or have the potential to occur in the project area. Such activities also would not result in a substantial reduction in the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, or threaten to eliminate such a population.

Existing damaged piles provide vertical relief habitat for encrusting invertebrates, including barnacles, mussels, anemones, sponges, and others. Replacement of the damaged pilings would remove these mature invertebrate communities and could affect the other species that depend on them such as mobile invertebrates (e.g., crabs) and fish. The coated piles that would be used as replacements may have reduced suitability as habitat for encrusting invertebrates. However, no studies were located that specifically examined “fouling” of coated piles by invertebrates. Anecdotal information from observation of other polyurea pilings suggest that they remain suitable for encrusting organisms, would be colonized from the surrounding remaining pilings, and that no long-term effect to the Wharf biota would result from the replacements.

PAHs and metals that leak or leach from construction equipment can result in adverse impacts to salmonids. PAHs can alter salmonid egg hatching rates and reduce egg survival as well as harm the benthic organisms that are a salmonid food source (Eisler 2000). Some of the effects that metals can have on salmonids are: immobilization and impaired locomotion, reduced growth, reduced reproduction, genetic damage, tumors and lesions, developmental abnormalities, behavior changes (avoidance), and impairment of olfactory and brain functions (Eisler 2000). However, as discussed above for water quality, accidental spills would be minimal, and in many cases cleanup would be possible before the contaminants enter the water. Fine sediments generated from the construction activities might be transported to Monterey Bay during rising tides, resulting in a localized increase in turbidity which could cause short-term impacts to marine resources. Depending on wave heights and tidal flushing,
the material could stay suspended in the water column, reducing submarine light intensity, primary productivity, and subsurface visibility for sight-foraging fishes and seabirds. However, the intertidal and subtidal zones are frequently subject to these transient changes in turbidity and no long-term effect would result.

Fish eggs and larval, juvenile, and adult fish would likely experience few to no effects due to construction activities. Fish eggs and larval fish are primarily found in the water column and are dispersed by water movement away from the intertidal zone during lower tides when work on the Wharf is expected to occur, so fish eggs and larval fish are not expected to be impacted by the construction. Juvenile and adult fishes have the ability to move to avoid disturbances during construction activities.

Marine mammals would likely be disturbed by the construction activity, and most would move quickly away from the area of disturbance without experiencing much effect. Disturbance, including noise disturbance, could affect federally-listed sea otters (threatened); and other species (pinnipeds) protected under the MMPA such as California sea lions and Pacific harbor seals. Due to the work being in the water, especially for pile installation, noise disturbance may affect cetaceans that are commonly found close to shore such as bottlenose dolphins and harbor porpoises. Noise impacts from the Project, as described below, are not expected to approach thresholds for marine mammals.

Neither NOAA Fisheries nor USFWS have specific take criteria for harassment of sea otters. Importantly, any habitat, including kelp forests, would not be affected. This Project is not expected to impact sea otters especially since no distinct home ranges have been identified near Soquel Creek (Tinker et al. 2013), resources are plentiful in Monterey Bay, no habitat would be directly impacted by construction, and mitigation measures would be in place for construction equipment BMPs.

6.3 Terrestrial Noise Impacts

Operational noise from construction equipment and activities has the potential to disturb shorebirds, gulls, and other coastal birds that may forage or rest on beaches at or near the Wharf. This impact would not be substantially adverse and would remain less than significant because (1) disturbance effects would be temporary and limited to the period of construction; (2) the proximity of unaffected shoreline adjacent to the repair activities site that provides foraging opportunities; and, the (3) the foraging areas at the repair activities site would rapidly recover following the conclusion of construction.

6.4 Marine Noise Impacts

Underwater sound levels resulting from pile installation could indirectly harm fish and marine mammals, including special status and protected species, if any are present at the time of construction and pile installation. Species that could be affected are: federally-listed sea otters (threatened); other species protected under the MMPA (California sea lions, Pacific harbor seals, common bottlenose dolphin, harbor porpoise, and whale species that may occasionally be in the action area); and special status fish species if present in the area (Coho salmon, Chinook salmon, steelhead and green sturgeon).

Installation of piles can result in indirect harm, disturbance or injury and/or harassment to marine mammals or fish, including special status species, which may be in the action area during pile installation, depending on the size and type of piles used and method of installation. The federal Endangered Species Act defines “harm” to include actions that would kill or injure fish or wildlife by significantly impairing essential behavioral patterns, including breeding, spawning, rearing, migrating, feeding, and sheltering. “Harass” is defined as any act that creates the
likelihood of injury to a species to such an extent as to significantly disrupt normal behavior patterns such as feeding, breeding, or sheltering.

Current criteria for fish were established in 2008 by the Fisheries Hydroacoustic Working Group (FHWG), whose members include the National Marine Fisheries Service’s Southwest and Northwest Divisions, California, Washington, and Oregon Departments of Transportation, the California Department of Fish and Wildlife, and the U.S. Federal Highway Administration. Although these criteria are not formal regulatory standards, they are generally accepted as viable criteria for underwater noise effects on fish. The agreed upon criteria identify sound pressure levels of 206 decibels (db) peak and 187 db accumulated sound energy levels (SEL) above for all fish, except those less than 2 grams in body weight, for which 183 db were determined to be potentially detrimental to fish (National Oceanic and Atmospheric Administration, June 2008, Caltrans, November 2015b). No threatened or endangered fish of less than 2 grams body weight were determined to be present in the project area in past surveys of the area, but larvae of fish species managed under the Magnuson-Stevens Act may be present (URS Corporation, May 2013), and thus, the 183 db SEL threshold was used for this analysis. Behavioral effects are not covered under these criteria, but could occur at these levels or lower. Behavioral effects may include fleeing and the temporary cessation of feeding or spawning behaviors (Ibid.).

The Marine Mammal Protection Act (MMPA), adopted in 1972, makes it unlawful to take or import any marine mammal and/or their products. Under this federal law, an incidental harassment permit may be issued for activities other than commercial fishing that may impact small numbers of marine mammals. An incidental harassment permit covers activities that extend for periods of not more than one year, and that will have a negligible impact on the impacted species. Levels of harassment for marine mammals are defined in the MMPA as:

- Level A harassment is defined as “[A]ny act of pursuit, torment, or annoyance which has the potential to injure a marine mammal or marine mammal stock in the wild.”
- Level B harassment is defined as “[A]ny act of pursuit, torment, or annoyance which has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including but not limited to migration, breathing, nursing, breeding, feeding or sheltering.”

Any activities that may result in harassment of marine mammals under these guidelines would require an Incidental Take Authorization for fish and/or Incidental Harassment Authorization for marine mammals from NOAA Fisheries. NOAA is developing comprehensive guidance on sound characteristics likely to cause injury and behavioral disruption in the context of the Marine MMPA, federal Endangered Species Act (FESA) and other statutes. Until formal guidance is available, NOAA Fisheries uses conservative thresholds of received sound pressure levels from broadband sounds that may cause behavioral disturbance and injury. These conservative thresholds are applied in MMPA permits and FESA Section 7 consultations for marine mammals to evaluate the potential for sound effects. The criterion levels specified below are specific to the levels of harassment permitted under the MMPA (National Oceanic and Atmospheric Administration website). The NOAA Fisheries criteria distinguishes between impulse sound, such as that from impact pile driving, and continuous sound, such as that from vibratory pile driving.

The Level A (injury) and Level B (disturbance) threshold levels used by NOAA Fisheries are summarized in Table 4 for cetaceans (whales, dolphins, and porpoises) and pinnipeds (seals and sea lions). NOAA is developing comprehensive guidance on sound characteristics likely to cause injury and behavioral disruption in the context of the Marine Mammal Protection Act (MMPA), Endangered Species Act (FESA) and other statutes. Until formal guidance is available, NOAA Fisheries uses conservative thresholds of received sound pressure levels from broadband sounds that may cause behavioral disturbance and injury, and the criterion levels specified in Table 4 are specific to the levels of harassment permitted under the MMPA (NMFS 2018b).

SOURCE: NOAA Fisheries 2018

Currently, neither NOAA Fisheries nor USFWS have specific take criteria for harassment of sea otters, a federally listed threatened species. In the absence of noise thresholds specific to sea otters, USFWS has used the Level A 180 dB RMS threshold (updated Level A 202-232 dB RMS; NMFS 2018b) and the Level B 160 dB RMS threshold for impulse noise; and Level B 120 dB RMS for continuous noise (URS Corporation, June 2013).

Different types and diameters of piles produce different underwater sound levels when they are driven. Monitoring of installation of 12- to 14-inch timber piles showed RMS ranging from 158 to 172 dB at a distance of 10 meters at one location and 140-158 dB RMS at a second location (Caltrans 2015b). Both locations used impact pile drivers. One site was also monitored with use of a vibratory pile driver, and RMS levels ranged from approximately 127 to 142 dB at a distance of about 25 feet (Ibid.). There is little data available on installation of fiberglass piles, and none specifically for vibratory installation of fiberglass piles; however, data was collected for impact pile driving of 16-inch piles at a wharf in Port Canaveral in Florida (Iafrate et al 2016). Their results included measurement of sound exposure levels (SEL) within the interior of the wharf with mean single-strike SEL ranging from 120 to 139 dB, and mean single-strike SEL in open water outside the wharf ranging from 120 dB at 371 meters to 142 dB at 41 meters.

---

2 RMS refers to the sound pressure level that is square root of the sum of the squares of the pressure contained within a defined period from the initial time to the final time. For marine mammals, the RMS pressure historically has been calculated over the period of the pulse that contains 90 percent of the acoustical energy (Caltrans, 2015b).
Based on data from the above studies, the installation by vibratory hammer of up to 120, 15-inch fiberglass piles, and installation of 21 12-inch ACZA-treated, polyurea coated timber piles/fiberglass piles by impact hammer would not be expected to exceed Level A thresholds (202-232 dB RMS) that would cause injury to marine mammals (NMFS 2018b). However, marine mammals could be exposed to sound levels exceeding the Level B harassment guidelines (120 dB RMS) in areas near the vibratory pile-driving activities due to underwater and airborne noise. Applicable criteria for marine mammals regarding airborne noise for Level B (disturbance) threshold is 90 dB RMS for harbor seals and 100 dB RMS for all other pinnipeds (e.g., sea lions) (NMFS 2018b). Pile driving may result in airborne noise levels that exceed NOAA Fisheries thresholds for Level B harassment. Sea lions or sea otters that range near the pile driving activities may be exposed to airborne noise levels exceeding 100 dB in). This could result in behavioral disturbance to marine mammals that may be present in the action area. However, sea lions do not appear to haul out on the Capitola Wharf, and the soft-start procedures proposed for the project would prompt marine mammals to move out of the zone of harassment if the noise levels proved bothersome.

Pile driving would be expected to result in noise levels below 183 dB SEL that has been determined to be potentially detrimental for fish species based on monitored sound levels in the Caltrans Guidelines (2015a). Special-status and other fish in the same area may be exposed to temporary increased sound levels, but installation of piles would not be expected to cause physical injury or mortality to fish species. The activity associated with pile driving would likely drive fish from the action area, reducing the likelihood of exposure to higher peak sound levels.

6.5 Impacts to Designated Critical Habitat

Designated critical habitat for leatherback sea turtles and green sturgeon occurs within the action area. Given the type of activities, limited footprint, temporal nature of work proposed, along with implementation of the BMPs and other conservation measures outlined in Section 7, the potential effects of the proposed Project are considered insignificant and are not expected to result in any changes to existing habitat values or result in adverse impacts to suitable habitat for either species. Therefore, the proposed Project actions would not have substantial adverse effects on designated critical habitat for leatherback sea turtles or green sturgeon.

6.6 Impacts to Essential Fish Habitat and MSA-managed Species

Impacts to EFH are typically determined based on whether a project reduces quality and/or quantity of EFH, regardless of the degree to which that impact occurs. Based on the Magnuson-Stevens Act, adverse effects may include direct or indirect physical, chemical, or biological alterations of the waters or substrate and loss of, or injury to, benthic organisms, prey species, and their habitat, and other ecosystem components, if such modifications reduce the quality and/or quantity of EFH.

The proposed Project would temporarily modify EFH at the Wharf, as well as localized portions of Monterey Bay surrounding the action area, but the effects would not result in permanent habitat loss or more than short-term displacement of MSA-managed species and habitat. No direct impacts are expected to occur to MSA-managed species. Potential localized adverse effects to EFH from Project activities include: 1) modifications to benthic habitat and substrate through construction activities; 2) temporary effects to water quality; and 3) noise impacts:
• Turbidity and Water Quality. Less than significant impacts to water column EFH and soft-bottom benthic habitat at the nearshore and offshore construction area are anticipated and would constitute temporary adverse impacts (e.g., temporary turbidity plume due to disturbance to soft bottom habitat from construction).

• Disturbance of Benthic Species and Foraging Habitat. During the installation of 120 15-inch fiberglass piles, as well as replacement of up to 21 damaged existing piles, temporary disturbance to invertebrate species and juvenile pelagic and/or ground fish foraging habitat in the immediate area of impact would occur. Disturbed benthic habitat areas are likely to be quickly recolonized by benthic species and in-benthic invertebrates due to the relative minor benthic disturbance footprint (Thrash and Dayton 2002).

• Noise Impacts: Underwater sound levels resulting from pile installation could indirectly harm fish and marine mammals, including special status and protected species, if any are present at the time of construction and pile installation.

• The most significant impact is underwater noise from pile driving using vibratory hammers or impact hammers and therefore, the project would result in a potentially significant impact. Vibratory methods are typically preferred as they reduce impacts to fish listed under the ESA. The implementation of the proposed avoidance, minimization, and conservation measures would significantly reduce the duration and footprint of disturbance and relative impact to EFH. Therefore, the Proposed Action would not have substantial adverse effects on EFH or species managed under the Pacific Groundfish FMP, Coastal Pelagic Species FMP, or Pacific Salmon FMP.
7 Best Management Practices and other Conservation Measures

The BMPs and other conservation measures presented in this section are recommended as “built-in” measures to avoid or minimize potential environmental effects to biological resources, with a focus on ESA-listed and MSA-managed species. The proposed measures reduce Project impacts to ESA-listed species and/or MSA-managed species from water quality, noise, and other construction-related disturbance.

7.1 General Conservation Measures

1. If Project construction occurs outside of nesting bird season, no additional mitigation is required. If Project construction occurs within the nesting bird season (e.g., February 15 – September 15), nesting bird surveys shall be conducted. No more than 7 days prior to initiation of construction activities or within 14 days after start of nesting bird season if construction activities have already commenced, a qualified biologist with at least 5 years of experience conducting nesting bird surveys shall conduct a nesting bird survey out to 500 feet from construction to determine if active nests of bird species protected by the Migratory Bird Treaty Act, Endangered Species Act, and/or the California Fish and Game Code are present. In addition, periodic surveys for active nests shall be conducted within this same area every 14 days during Project construction within the nesting season. The extent of the survey monitoring area is shown on Figure 4. If active nests are found, construction activities within 300 feet from nests of MBTA protected species and within 500 feet from nests of ESA listed species and raptors (or other sufficient distance pending field conditions as determined by the qualified biologist) shall be modified, postponed or halted, until the nest is vacated, the young have fledged, and/or there is no evidence of a second attempt at nesting. Alternatively, the biological monitor shall establish a behavioral baseline of all identified active nests and continuously monitor the nests during active construction for signs of Project-related behavioral changes. If behavioral changes are not observed, work may proceed. If behavioral changes are observed, work shall be halted or postponed until modifications demonstrate to the biologist’s satisfaction that Project-related activities are no longer causing behavioral changes. Monitoring shall not extend beyond Cliff Drive because the effects and noise environment beyond that location is dominated by roadway and train effects.

2. To the extent feasible, Wharf expansion work will be conducted at low tides when the work area is exposed, minimizing the contact of construction equipment with water.

3. A qualified biologist will lead an on-site environmental training for work crews prior to the start of the proposed Project to protect surrounding biological resources. Any new crew members brought onto the job prior to Project commencement must undergo the environmental training before starting work on the Project. Pre-construction training will involve discussion on the status and sensitivity of the target species in the area and the actions to be taken to avoid or minimize impacts in the event of a target species entering the work area.
7.2 Construction BMP Measures

1. The contractor implementing the proposed Project will exercise every reasonable precaution and BMPs to protect marine biological resources from construction by-products and pollutants, such as construction debris, chemicals, fuel, hydraulic fluid, fresh cement, saw-dust, or other deleterious materials.

2. A spill plan and appropriate spill control and clean-up materials (e.g., oil absorbent pads) shall be retained on site in case a fuel spill occurs. All construction vehicles and equipment shall be inspected before they are moved to the Project site, and shall not be moved to the site if leaking fluids that could result in spills of toxic materials. All construction vehicles and equipment used on site shall be well maintained and checked daily for fuel, oil, and hydraulic fluid leaks or other problems that could result in spills of toxic materials.

3. Vehicle staging, cleaning, maintenance, refueling, and fuel storage shall take place in a vehicle staging area. The fueling area will be double lined. Daily monitoring will occur to ensure there are no leaks. Oil absorbing pads, drip pans, or similar devices will be placed beneath the equipment when staged overnight to catch any leakage.

4. Once Wharf expansion activities are complete, all temporary construction-related equipment and material will be removed from the site.

7.3 Noise Mitigation Measures

Implementation of the following measures will reduce the impact of potential Level A and Level B marine mammal harassment to a less-than-significant level.

The project applicant will prepare and implement a marine mammal monitoring plan including measures to avoid exposure of marine mammals to high sound levels that could result in Level B harassment that may include, but are not limited to, the following:

1. Pre-construction training for construction crews prior to in-water construction regarding the status and sensitivity of the target species in the area and the actions to be taken to avoid or minimize impacts in the event of a target species entering the in-water work area.

2. Establishment of an underwater “exclusion zone”—defined as the distance where underwater noise levels would exceed 120 dBrms for continuous noise or 160 dBrms for impact noise. The exclusion zone distance(s) shall be from the active pile driving/installation source as detailed below or an alternative distance(s) if required by the Project’s regulatory permits. Exclusion zones by pile type and installation method are as follows:
   a. Underwater exclusion zone
      i. Fiberglass pile vibratory installation – 410 meters
      ii. Fiberglass pile impact proofing – 8.8 meters
      iii. Timber pile impact driving – 63 meters
   b. In-air exclusion zone
      i. Fiberglass pile vibratory installation – 7.1 meters (seals) and 2.8 meters (sealions)
      ii. Fiberglass pile impact proofing – 30.3 meters (seals) and 12.1 meters (sealions)
      iii. Timber pile impact driving – 11.4 meters (seals) and 4.5 meters (sealions)
Marine mammal monitoring of the exclusion zone shall be conducted prior to commencement of pile installation. Pile installation activities shall not commence until marine mammals are not sighted in the exclusion zone for 15 minutes. This measure shall be included on the construction plans. This will be refined in consultation with NOAA Fisheries.

3. Marine mammal monitoring of the exclusion zone will be conducted prior to commencement of pile driving.

4. Pile-driving activities will not commence until marine mammals are not sighted in the exclusion zone for 15 minutes. This will avoid exposing marine mammals to sound levels in excess of the Level A and Level B criteria.

5. Pile-driving will commence with a soft start procedure (ramping up) in order to alert nearby wildlife, allowing them to move out of the area prior to construction activities.

6. Use of a wood cushion block or other sound-reducing method if impact pile driving is to be employed. The use of wood cushion blocks during construction would result in a substantial reduction in underwater noise.

7. Prohibit disturbance or noise to encourage the movement of the target species from the work area. The City will contact USFWS and NOAA Fisheries to determine the best approach for exclusion of the target species from the in-water work area.

8. Any necessary biological monitoring reporting will be submitted to the agencies as required in the permit.

U.S. Army Corps of Engineers (USACE)
San Francisco District – Regulatory Division
1455 Market Street, 16th Floor
San Francisco, California 94103-1398

Attn: Greg Brown

Subject: Cultural Resources Memorandum for the Proposed Capitola Beach Flume and Jetty Rehabilitation Project, Located in Capitola, California

Dear Mr. Brown:

The City of Capitola and their engineering and environmental sub-consultants, Moffatt & Nichol and Dudek, have reviewed the likelihood of the proposed Capitola Beach Flume and Jetty Rehabilitation Project (proposed project) affecting any cultural resources in the project area. The review has revealed no known or recorded cultural resources at or immediately adjacent to the flume, jetty, or proposed project area. Furthermore, there would be no changes in land use, public access, or permanent traffic patterns associated with project. The location and configuration of the flume and jetty would not change. The National Register of Historic Places database was examined and the closest known resource was identified to be over 400 feet away and would not be disturbed by construction of the proposed project (Figure 1).

Additionally, the USACE coordinated with the City of Capitola for the 2017 Soquel Creek Lagoon Management and Enhancement Plan. This coordination resulted in a determination that no cultural resources would be affected by that project. Given the overlapping footprint of the proposed project to the Soquel Creek Lagoon Management and Enhancement Plan, implementation of the proposed project is similarly not anticipated to result in impacts to cultural resources.

In July 2018, the City of Capitola prepared a Cultural Resources Assessment for a separate project located approximately 0.35 miles from the proposed project site (106 Sacramento Avenue, Capitola, CA). As part of that Cultural Resources Assessment, a records search of the California Historical Resources Information System (CHRIS) was conducted for a study area overlapping the proposed project footprint. The search did not identify any known or recorded cultural resources at or immediately adjacent to the proposed project area.

Based on these reviews, we believe that implementation of the proposed project would not impact any cultural resources. If you have any additional questions, please feel free to contact our permit coordinating lead, Anna Johnson, at 925-944-5411 or ajohnson@moffattnichol.com. Thank you for your review of this information.

Sincerely,

Steve Jesberg
Public Works Director

Capitola Wharf Resiliency and Public Access Improvement Project

MITIGATION MONITORING AND REPORTING PROGRAM (MMRP)

Introduction

This document is the Mitigation Monitoring and Reporting Program (MMRP) for the Capitola Wharf Resiliency and Public Access Improvement Project (Project). This MMRP has been prepared pursuant to Section 21081.6 of the California Public Resources Code, which requires public agencies to “adopt a reporting and monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment.” A MMRP is required for the proposed Project because the Initial Study/Mitigated Negative Declaration (IS/MND) has identified mitigation measures to reduce potential impacts to less than significant.

Mitigation Monitoring and Reporting Program

As the lead agency, the City of Capitola will be responsible for monitoring compliance with all mitigation measures. Different departments within the City are responsible for aspects of the Project. It is expected that one or more departments will coordinate efforts to ensure compliance. The MMRP is presented in tabular form on the following pages. The components of the MMRP are described briefly below:

- **Mitigation Measure:** The mitigation measure(s) are taken from the IS/MND, in the same order that they appear in the IS/MND.

- **Method of Verification:** Identifies the potential method(s) that will be used to confirm that each mitigation measure has been implemented.

- **Timing of Verification:** Identifies at which stage of the Project the mitigation must be completed.

- **Monitoring Responsibility:** Identifies the City as responsible for mitigation monitoring and other parties potentially needed to facilitate implementation.

- **Verification (Date and Initials):** Provides a contact who reviewed the mitigation measure and the date the measure was determined complete.

<tr>
<td><strong>BIO-1</strong> A biologist shall lead on-site environmental training for work crews prior to the start of the proposed Project. Any new crew members brought onto the job prior to Project commencement must undergo the environmental training before starting work on the Project. Pre-construction training shall involve discussion on the status and sensitivity of the target species in the area and the actions to be taken to avoid or minimize impacts in the event of a target species entering the work area. This measure shall be included on the construction plans.</td>

<td></td>
</tr>
<tr>
<td><strong>BIO-3</strong> A pile installation “exclusion zone” defined as the distance where underwater and in-air sound levels exceed the Level B harassment threshold (160 dB RMS threshold for impulse noise; and 120 dB RMS for continuous noise) shall be established. The exclusion zone distance(s) shall be from the active pile driving/installation source as detailed below or an alternative distance(s) if required by the Project’s regulatory permits. Exclusion zones by pile type and installation method are as follows: Underwater exclusion zone  1. Fiberglass pile vibratory installation – 410 meters  2. Fiberglass pile impact proofing – 8.8 meters  3. Timber pile impact driving – 63 meters In-air exclusion zone  1. Fiberglass pile vibratory installation – 7.1 meters (seals) and 2.8 meters (sealions)  2. Fiberglass pile impact proofing – 30.3 meters (seals) and 12.1 meters (sealions)  3. Timber pile impact driving – 11.4 meters (seals) and 4.5 meters (sealions) Marine mammal monitoring of the exclusion zone shall be conducted prior to commencement of pile installation. Pile-installation activities shall not commence until marine mammals are not sighted in the exclusion zone for 15 minutes. This measure shall be included on the construction plans.</td>

### Mitigation/Avoidance Measure

**BIO-4**

If Project construction occurs outside of nesting bird season, no additional mitigation is required. If Project construction occurs within the nesting bird season (e.g., February 15 – September 15), nesting bird surveys shall be conducted. No more than 7 days prior to initiation of construction activities OR within 14 days after start of nesting bird season if construction activities have already commenced, a qualified biologist with at least 5 years of experience conducting nesting bird surveys shall conduct a nesting bird survey out to 500 feet from construction to determine if active nests of bird species protected by the Migratory Bird Treaty Act, Endangered Species Act, and/or the California Fish and Game Code are present. In addition, periodic surveys for active nests shall be conducted within this same area every 14 days during Project construction within the nesting season. The extent of the survey monitoring area is shown on Figure 5. If active nests are found, construction activities within 300 feet from nests of MBTA protected species and within 500 feet from nests of ESA listed species and raptors (or other sufficient distance pending field conditions as determined by the qualified biologist) shall be modified, postponed or halted, until the nest is vacated, the young have fledged, and/or there is no evidence of a second attempt at nesting. Alternatively, the biological monitor shall establish a behavioral baseline of all identified active nests and continuously monitor the nests during active construction for signs of Project-related behavioral changes. If behavioral changes are not observed, work may proceed. If behavioral changes are observed, work shall be halted or postponed until modifications demonstrate to the biologist’s satisfaction that Project-related activities are no longer causing behavioral changes. Monitoring shall not extend beyond Cliff Drive because the effects and noise environment beyond that location is dominated by roadway and train effects.

**CUL-1**

Prior to City approval of the Project’s final 100% design plans, the City’s Architectural & Site Review Committee shall perform a focused review of the draft 100% design plans for consistency with the design plans reviewed and recommendations provided in the Project’s April 2020 (or as amended) *Secretary of the Interior’s Standards and Historic Integrity Review*. The City’s focused review shall evaluate consistency with the following elements:

a. Compatible texture and finish of proposed exterior of the new piles and repaired piles;

b. Compatible design, scale, materials, location, etc., of the prefabricated restrooms;

c. Design, scale, materials, etc., of the altered entrance gates; and

d. Design, scale, materials, etc., of the new security gates.

### Hydrology and Water Quality

- **HWQ-1** The City shall obtain all necessary permits from applicable agencies with jurisdiction over the Project. The contractor will implement and document compliance with permit conditions and BMP practices required by the permits per agency requirements and for City records. Proof of implementation may include but is not limited to the use of before-and-after photo documentation, copies of receipts and/or construction management logs.

- **HWQ-2** If ACZA treated polyurea coated piles are not used for this Project, no mitigation is required. If ACZA treated polyurea coated piles are used, the City shall implement a monitoring and maintenance plan to annually assess the integrity of the polyurea coating on all piles added as part of the Project. The monitoring plan shall be incorporated into an existing City maintenance plan or created as a new maintenance plan within 90 days after completing project construction. The monitoring and maintenance plan will include annual inspection after each winter storm season to assess the integrity of the polyurea coating and repair of any damage to the coating that may have occurred.

### Noise

- **NOI-1** Pile Driving Notification Plan – The City shall implement a pile driving notification plan as described herein to keep residents informed of the Project’s pile driving schedule. Prior to pile driving activities and within 2 weeks after award and execution of the construction contract, the Contractor shall provide the City with a pile driving schedule that identifies: (1) start date of pile driving, (2) anticipated weekly work zones by estimated date shown on an aerial map (or plan sheet overview), (3) estimated pile driving completion date, and (4) website address for accessing the pile driving schedule on-line. The Contractor shall be required to post and maintain the schedule onsite near the Wharf Foot. The Contractor shall update the schedule at least every two weeks and provide the schedule to the City by the following day for posting on the City’s website.

Pile driving schedule posted near the Wharf foot and on the City’s website | Prior to pile driving and within 2 weeks after award and execution of the construction contract | City/ City Contractor | |

---

*City of Capitola*

Subject: Capitola Wharf Resiliency and Public Access Improvement Project Initial Study/Mitigated Negative Declaration (SCH# 2020040104)

Dear Mr. Mozumder:

The California Department of Fish and Wildlife (Department) has reviewed the Initial Study/Mitigated Negative Declaration (IS/MND) for the Capitola Wharf Resiliency and Public Access Improvement Project (Project). Located in the city of Capitola, Santa Cruz County, the proposed Project aims to improve wharf resiliency and public access and safety. The Project will expand the wharf’s narrow trestle, which is most vulnerable to damage from winter storms, and replace existing piles that are severely deteriorated. The expansion includes installation of up to 120 new, 16-inch composite (fiberglass) piles with high-density polyethylene (HDPE) sleeves and approximately 7,400 square feet of timber decking. Existing deteriorated or missing piles will be replaced with up to 21 new, 12-inch Ammoniacal Copper Zinc Arsenate (ACZA)-treated timber piles coated in polyurea or fiberglass piles. Other Project elements include replacement of exposed existing timber decking, repair of the hoist landing area, relocation of wharf utilities, and construction of a new bathroom at the wharf foot.

Department Jurisdiction
As a trustee for the State’s fish and wildlife resources, the Department has jurisdiction over the conservation, protection, and management of fish, wildlife, native plants, and habitat necessary for biologically sustainable populations of those species. In this capacity, the Department administers the California Endangered Species Act, the Native Plant Protection Act, and other provisions of the California Fish and Game Code that afford protection to the State’s fish and wildlife trust resources. The Department is the State’s fish and wildlife “Trustee Agency” under the California Environmental Quality Act (CEQA guidelines §15386). The Department is also responsible for marine biodiversity protection under the Marine Life Protection Act in coastal marine waters of California. Pursuant to our jurisdiction, the Department has the following comments and recommendations regarding the Project.

Marine Biological Significance
The marine ecosystems of California’s central coast host thousands of species of marine plants, fish, invertebrates, seabirds and shorebirds, turtles, and mammals. This extraordinary biodiversity stems from the region’s dynamic ocean environment, where upwelling provides nutrient-rich water to the coast and the multifarious seafloor creates a wide range of habitats. In Monterey Bay alone, habitats include estuaries, seagrass

Conserving California’s Wildlife Since 1870
meadows, kelp forests, rocky intertidal, sandy beaches, and deep submarine canyons. The variety of marine and coastal habitats provide fish and wildlife with nursery grounds, shelter, and areas to forage and reproduce, supporting the region’s numerous commercial and recreational fisheries and ecotourism economy.

Treated Timber Piles
The IS/MND specifies the replacement of deteriorated piles with either ACZA-treated timber piles coated in polyurea or fiberglass piles. Fish and Game Code Section 5650 states that it is unlawful to deposit in, permit to pass into, or place where it can pass into waters of the state any substance or material deleterious to fish, plant life, or bird life. The Department considers wood treated with ACZA to be a deleterious material and thus recommends avoiding the use of treated wood piles whenever possible. Timber piles coated or wrapped with a benign material, such as polyurea, may become damaged by contact with boats or debris, allowing harmful substances to enter the water through the damaged coating.

If the Project must use treated timber piles, the Department recommends inspecting these piles on a yearly basis to confirm the integrity of the coating and repair any damaged areas. This will be especially important for the Capitola Wharf, which is susceptible to battering by floating logs and other debris during winter storms. For this reason, the Department recommends monitoring treated timber piles after each winter storm season to assess and repair any damage that may have occurred.

Nesting Bird Surveys
Mitigation Measure MM BIO-4 does not clearly identify whether additional nesting bird surveys will occur during Project activities. If appropriately timed nesting bird surveys are not conducted, there is potential for nests to be left undetected and impacted by Project activities. Without appropriate avoidance and minimization measures for nesting birds, potentially significant impacts associated with Project activities include accidental entrapment, reduced reproductive success, nest abandonment, and direct mortality of individuals. The Department recommends incorporating the following mitigation measure into the IS/MND prepared for this Project:

The Department recommends that a qualified biologist, with at least five years of experience conducting nesting bird surveys, conduct pre-Project surveys for active nests no more than seven days prior to the start of Project activities and every 14 days during Project activities to maximize the probability that nests are detected. The Department also recommends that surveys cover a sufficient area around the Project area to identify nests and determine their status. A sufficient area means any area potentially affected by the Project. Prior to Project activities, the Department recommends that a qualified biologist conduct a survey to establish a behavioral baseline of all identified nests. Once Project activities begin, the Department recommends having the biologist continuously monitor nests during active project construction to detect behavioral changes resulting from the Project. If behavioral changes occur, the Department recommends halting the work causing that change and consulting with the Department for additional avoidance and minimization measures.
Conclusion:
The Department appreciates the opportunity to comment on the Capitola Wharf Resiliency and Public Access Improvement Project IS/MND. If you have any questions or comments, please contact Ms. Amanda Canepa, Environmental Scientist, (831) 649-2813 or Amanda.Canepa@Wildlife.ca.gov.

Sincerely,

DATE: May 18, 2020

SUBJECT: Response to comments on Draft Initial Study/ Mitigated Negative Declaration for the Capitola Wharf Resiliency and Public Access Improvement Project, Monterey County [SCH# 2020040104]

Dear Mr. Craig Shuman,

The City of Capitola appreciates the comments received from the California Department of Fish and Wildlife (CDFW) submitted May 5, 2020 (see attachment) regarding the California Environmental Quality Act (CEQA) Draft Initial Study/Mitigated Negative Declaration (IS/MND) for the Capitola Wharf Resiliency and Public Access Improvement Project (Project) in Monterey County.

In preparation for the City’s public hearing scheduled for June 4, 2020 regarding certification of the IS/MND and Project approval, the City is submitting a written response to the CDFW to share changes to the publicly circulated Draft IS/MND to address the CDFW comment letter. Any changes since circulation of the Draft IS/MND will be identified in the Final IS/MND. The responses to comments are presented below:

1. **Department Jurisdiction:** The comment provides context regarding CDFW’s role as a Trustee Agency under CEQA. The comment is noted. No revisions to the IS/MND are required.

2. **Marine Biological Significance:** The comment provides a summary of the marine resources in California’s central coast and Monterey Bay and their associated commercial and recreational value. The comment is noted. No revisions to the IS/MND are required.

3. **Treated Timber Piles:** The comment recommends avoiding use of chemically treated wood piles whenever possible. The comment also recommends that if the Project uses treated wood piles, that they be inspected for damage on a yearly basis after each winter storm season and that any damaged pile coatings be repaired. The City’s preferred pile material option is fiberglass; however, should the City need to use treated timber piles due to fiberglass pile sourcing constraints or other unforeseen issues, the City will monitor treated timber piles after each winter storm season to assess the integrity of the polyurea coating and repair any damage that may have occurred. The following mitigation measure has been added to the Final IS/MND and Mitigation Monitoring and Reporting Program in response to this comment:

   “**MM HWQ-2** If ACZA treated polyurea coated piles are not used for this Project, no mitigation is required. If ACZA treated polyurea coated piles are used, the City shall implement a monitoring and maintenance plan to annually assess the integrity of the polyurea coating on all piles added as part of the Project. The monitoring plan shall be incorporated into an existing City maintenance plan or created as a new maintenance plan within 90 days after completing project construction. The...
monitoring and maintenance plan will include annual inspection after each winter storm season to assess the integrity of the polyurea coating and repair of any damage to the coating that may have occurred."

4. **Nesting bird Survey:** The comment recommends modifications be made to mitigation measure MM BIO-4. The following modifications have been made in response to this comment:

"MM BIO-4 If Project construction begins outside of nesting bird season, no additional mitigation is required. If Project construction begins within the nesting bird season (e.g. February 15 – September 15), a pre-construction nesting bird surveys shall be conducted. No more than one week-7 days prior to initiation of construction activities OR within 14 days after start of nesting bird season if construction activities have already commenced, a qualified biologist with at least 5 years of experience conducting nesting bird surveys shall conduct a nesting bird survey out to 500 feet from construction activities to determine if active nests of bird species protected by the Migratory Bird Treaty Act, Endangered Species Act and/or the California Fish and Game Code are present. In addition, periodic surveys for active nests shall be conducted within this same area every 14 days during Project construction within the nesting season. In the nesting bird monitoring area shown on Figure 4. The extent of the survey monitoring area is shown on Figure 5. If active nests are found, construction activities within 300 feet of the from nests of MBTA protected species and within 500 feet of nests of ESA listed species and raptors (or other sufficient distance pending field conditions as determined by the qualified biologist) shall be modified, postponed or halted, until the nest is vacated, the young have fledged, and/or there is no evidence of a second attempt at nesting. Alternatively, the biological monitor shall establish a behavioral baseline of all identified active nests and continuously monitor the nests during active construction for signs of Project-related behavioral changes. If behavioral changes are not observed, work may proceed. If behavioral changes are observed, work shall be halted or postponed until modifications demonstrate to the biologist’s satisfaction that Project-related activities are no longer causing behavioral changes. Monitoring shall not extend beyond Cliff Drive because the effects and noise environment beyond that location is dominated by roadway and train effects."

In addition, the monitoring area shown on Figure 4 in the Final IS/MND has been modified to reflect these changes to MM BIO-4.

Thank you for the opportunity to respond to these comments. Should you have any additional questions about the Project please contact Kailash Mozumder at (831) 475-7300 or kmozumder@ci.capitola.ca.us.

Yours truly,

Subject: Capitola Wharf Resiliency and Public Access Improvement Project Initial Study/Mitigated Negative Declaration (IS/MND) [SCH# 2020040104]

Dear Mr. Mozumder:

Thank you for the opportunity to comment on the Capitola Wharf Resiliency and Public Access Improvement Project Initial Study/Mitigated Negative Declaration. The proposed project would increase the wharf’s resiliency and enhance the public access components of the wharf. Specifically, the proposed project would widen the wharf by 16 feet along approximately 458 linear feet of the existing wharf (which would entail the placement of 120 16-inch composite fiberglass piles). The proposed project would also replace 21 existing damaged piles with either timber or fiberglass piles, repair 12 steel piles at the head of the wharf, and replace existing exposed timber decking (totaling approximately 26,500 square feet). The proposed project further includes relocation of the wharf’s utilities from beneath to above the wharf’s deck, installation of a new security gate, modification of the wharf’s decorative entrance, additional benches, replacement of the existing restrooms located behind the restaurant, and installation of new restrooms near the base of the wharf.

Coastal Commission Permitting Jurisdiction

We would like to clarify that the Coastal Commission is responsible for authorizing the coastal development permit (CDP) for the entirety of the proposed project because the entire wharf is located within the Commission’s retained coastal permitting jurisdiction. The IS/MND notes that the Commission is responsible for authorizing the CDP, which encompasses “pile installation; trestle and deck widening; construction of restrooms;” (see pp. 18); however, it is not clear whether other project components, including the security gate and the wharf’s decorative entrance, will also be included in the CDP authorized the Commission. Although such project components may additionally and separately be authorized by the City through its local (non-CDP) design review process, these project components will need to be evaluated and authorized by the Commission as part of its CDP action. The IS/MND should also clarify a statement made in the “Biological Technical Report for the Capitola Wharf Resiliency and Public Access Improvement Project.” Specifically, it notes that the Commission authorizes all development within the Coastal Zone until certification of an LCP and then goes on to state that the City has a certified LCP (see pp. 116), thereby suggesting that the City is...
responsible for authorizing the CDP; however, because the Commission retains coastal permitting jurisdiction over any development located at or below the mean high tide line (as is the case here), the Commission is thereby responsible for issuing the CDP for the entirety of the proposed project.

**Applicable Coastal Act Requirements**
The following Coastal Act sections are provided as context; these policies will be used to evaluate the CDP upon submittal. At a broad level, the Coastal Act requires the protection of coastal resources including but not limited to marine resources and biological productivity, public access and recreation, water quality, and public views. More specifically, the Coastal Act requires that marine resources be maintained enhanced, and restored, and that special protection be given to areas and species of special biological significance (Section 30230); that biological productivity and quality of coastal waters be optimized including for marine populations and the protection of human health (Section 30231); that commercial and recreational boating facilities be protected and where feasible, upgraded (Section 30234); that the importance of recreational fishing be recognized and protected (Section 30234.5); that the visual and scenic quality of coastal areas be protected and that development be designed to be visually compatible with surrounding areas (Section 30251); that public access and recreational opportunities be maximized for all people (Section 30210); and that lower-cost and free visitor and access facilities and opportunities be provided and prioritized (Section 30213).

**Public Access**
The proposed project would improve public recreational access consistent with Coastal Act requirements, including by upgrading existing restrooms and providing additional restrooms at the base of the wharf, which can help serve the greater Village and Hooper Beach areas; improving pedestrian access along the wharf (including by separating pedestrian and vehicular traffic); increasing the area available for fishing and pedestrian access; and bolstering the boat hoist, which provides small boat access for both recreational and commercial fishing activities. In other words, the proposed project entails significant public access enhancements and supports a variety of low-cost recreational opportunities, as well as smaller scale commercial fishing operations. Thus, the proposed project appears to fulfill many of the Coastal Act objectives related to public access and recreation, as well as recognizing, preserving, and enhancing recreational and commercial fishing opportunities.

**Scenic and Visual**
In terms of the scenic and visual qualities of the proposed project, the restrooms, security gate, and entryway should be designed to be aesthetically pleasing and to maximize public view opportunities, including through appropriate siting and use of natural materials where feasible.
Water Quality, Marine Resources, and Biological Productivity

With regard to protection of marine resources, water quality, and biologic productivity, replacement of decking and pilings may lead to significant adverse impacts to such resources (e.g., chemicals from treated wood pilings/decking may leach into the water, piling wraps may deteriorate and/or become damaged and then dislodge into marine environment, and noise from pile driving can be deleterious to marine mammals, disrupting navigation and food and mate-finding, which can in turn lead to injury, stranding, and mortality). To mitigate potential impacts from pile driving, the use of a vibratory hammer for pile driving (to minimize sediment dispersal and to minimize noise impacts to marine mammals) and fiberglass pilings (as opposed to wood-treated pilings) are strongly preferred. Relatedly, wood-alternative materials are preferred over treated wood for use as decking; however, if ACZA-preserved lumber is used for decking, it should be sealed with a penetrating coating to help prevent the release of ACZA. Also, given the large amount of decking that is proposed to be replaced, methods will need to be in place to ensure that pieces of the obsolete decking being removed, as well as sawdust and small pieces from newly cut replacement decking, do not fall into the water. Other additional requirements that may be imposed to minimize noise and disruption to marine species include hydroacoustic testing (to determine an appropriate exclusion zone for marine mammals), marine mammal monitoring (to ensure that marine mammals are not present in the exclusion zone during pile driving activities), gradually ramping up the power of the pile driver so that any undetected marine mammals have time to leave the area to avoid noise impacts, and scheduling pile-driving activities during low tides to the extent feasible. In sum, the proposed activities have the ability to adversely impact biological productivity, marine resources (including marine mammals), and water quality, but through appropriate best management practices and appropriate CDP conditions, these impacts can be minimized and/or mitigated to be found consistent with the Coastal Act requirements related to the protection of marine resources, water quality, and biological productivity.

Additional Comments/Questions

The IS/MND notes that the proposed project intends to bolster the wharf, including to minimize future storm damage to the wharf; however, the life expectancy of the proposed improvements is not clear, especially when considering the relatively low elevation of the wharf, as well as anticipated sea level rise scenarios and increased storm events and El Niño cycles over time. Accordingly, we recommend that the City consider the life expectancy of the proposed work and an estimated future timeline when additional work may be necessary to ensure the long-term stability and ongoing public use of the wharf.

We appreciate your consideration of these comments and look forward to working with the City on the CDP for the proposed project. If you have any questions or would like to discuss these comments, please do not hesitate to contact me at Rainey.Graeven@coastal.ca.gov.
Sincerely,

Rainey Graeven

SUBJECT: Response to comments on Draft Initial Study/ Mitigated Negative Declaration for the Capitola Wharf Resiliency and Public Access Improvement Project, Monterey County [SCH# 2020040104]  

Dear Mr. Rainey Graeven,  

The City of Capitola appreciates the comments received from the California Coastal Commission (CCC) submitted May 11, 2020 (see attachment) regarding the California Environmental Quality Act (CEQA) Draft Initial Study/Mitigated Negative Declaration (IS/MND) for the Capitola Wharf Resiliency and Public Access Improvement Project (Project) in Monterey County.  

In preparation for the City’s public hearing scheduled for June 4, 2020 regarding certification of the IS/MND and Project approval, the City is submitting a written response to the CCC to share changes to the publicly circulated Draft IS/MND to address the CCC comment letter. Any changes since circulation of the Draft IS/MND will be identified in the Final IS/MND. The responses to comments are presented below:  

1. **Coastal Commission Permitting Jurisdiction**: The comment provides clarification on the CCC’s jurisdictional authority over the Project. To clarify that the CCC is responsible for authorizing the Coastal Development Permit (CDP) for the entirety of the proposed Project, the description in Table 1 on the Final IS/MND has been revised from “pile installation; trestle and deck widening; construction of restrooms” to “Development at or below the mean high tide line”. To clarify that the entire Wharf is located within the CCC’s retained coastal permitting jurisdiction, the following sentence has been added to section 3.4 of the IS/MND: “The CCC retains coastal permitting jurisdiction over any development located at or below the mean high tide line and is thereby responsible for issuing the Coastal Development Permit (CDP) for the entirety of the proposed Project.”  

2. **Applicable Coastal Act Requirements**: The comment provides Coastal Act policy context regarding CDP approval. The comment is noted. No revisions to the IS/MND are required.  

3. **Public Access**: The comment summarizes attributes of the Project that fulfill Coastal Act objectives related to public access, recreation and fishing. The comment is noted. No revisions to the IS/MND are required.  

4. **Scenic and Visual**: The comment states, the proposed “…restrooms, security gate, and entryway should be designed to be aesthetically pleasing and to maximize public view opportunities...”. Per Section 3.1 Aesthetics and Section 3.5 Cultural Resources of the Draft IS/MND, the proposed...
May 18, 2020
Page 2

Project is not anticipated to have a significant impact on aesthetics and improvements are intended to maintain the historical integrity of the Wharf through design and use of in-kind and/or similar substitute materials to those currently existing. Project elements have been designed to be aesthetically pleasing and maximize public view opportunities. Public seating areas are proposed, gates are designed not to obstruct views, and restrooms are designed to have a relatively small footprint. As design is finalized and the Project moves to the permitting phase, additional photographs and diagrams can be presented to the CCC for consideration as part of the CDP.

5. Water Quality, Marine Resources, and Biological Productivity: The comment notes CCC’s preference for vibratory pile installation over impact pile driving installation to minimize sediment dispersal and noise impacts on marine mammals. The comment also discusses potential issues associated with use of chemically treated wood materials but notes that implementation of best management practices and CDP conditions would maintain consistency with Coastal Act requirements.

Per the Project Description, vibratory installation is the predominantly anticipated installation method with impact driving anticipated mainly for proofing near the end of each pile installation. In addition, mitigation measure MM NOI-2 requires a pile driving soft-start, MM BIO-2 requires use of a sound dampening cushion for pile driving, MM-BIO-3 requires a marine mammal exclusion/shutdown zone for pile installation activities, and MM HWQ-1 requires compliance with all agency permitting conditions. These measures were included in the Draft IS/MND Sections 3.13 Noise, 3.4 Biological Resources and 3.10 Hydrology and Water Quality, respectively, to protect water quality and marine resources. Potential water quality, marine resource, and biological productivity impacts would be minimized and or mitigated to less than significant through these measures and implementation of appropriate best management practices and CDP conditions determined in the Project’s permitting phase. No revisions to the IS/MND are required.

6. Additional Comments/Questions: The life expectancy of the elements proposed as part of this Project is 30 years before any substantial repair and or maintenance will be required. The City’s preferred pile type option (fiberglass) is extendable. If necessary, in the future, fiberglass piles could be extended and the Wharf deck could be raised to address sea level rise under a separate project that would undergo its own environmental review and permitting process. Modifications to raise the deck as a means to address sea level rise are not proposed as part of this Project; however, the potential future need to do so was considered when choosing the preferred pile type option.

Thank you for the opportunity to respond to these comments. Should you have any additional questions about the Project please contact Kailash Mozumder at (831) 475-7300 or kmozumder@ci.capitola.ca.us.

RE: Proposed Rehabilitation and Repair Project, Capitola Wharf, Capitola, CA
Secretary of the Interior's Standards and Historic Integrity Review

FROM: Leslie A.G. Dill, Historic Architect

INTRODUCTION

This report represents a review of a proposed rehabilitation project for the Capitola Wharf Resiliency and Public Access Improvement Project. The project will repair and alter the Capitola Wharf, a historic resource. The review was undertaken to analyze potential impacts on the historic resource itself and as a contributor to the identified cultural landscape district embodied by the Capitola Beach. The review utilizes the Secretary of the Interior’s Standards for Historic Properties – Rehabilitation Standards (Standards). The project was also reviewed for the potential impact of the project on historic integrity of the historic resource and the cultural landscape district. We understand that one of the intents of this project is to be compatible with the Standards as a way of mitigating the project to a less than significant impact under the California Environmental Quality Act (CEQA).

Executive Summary

With the recommended review of four components of the design by the City of Capitola in the future, prior to construction, the Capitola Wharf Resiliency and Public Access Improvement Project, as currently presented, can be found substantially compatible with the Secretary of the Interior’s Standards for the Treatment of Historic Properties. The project, as conditioned for future review, would not substantially impact the historic integrity of the individually listed historic resource Capitola Wharf nor of the identified Capitola Beach Cultural Landscape District.

The four components that are recommended for future design review are as follows:

- Finish and texture of piles at the new addition/trestle widening
- Design and materials of the new prefabricated restroom facilities
- Design of altered decorative entrance gates
- Design of replacement security gates
Methodology

For this report, Leslie Dill of Archives & Architecture LLC referred to the 2004 Draft Historic Context Statement for the City of Capitola by Carolyn Swift and to the 2005 City of Capitola Historic Structures List. She also referred to the recently updated Capitola Wharf and Capitola Beach evaluations by Archives & Architecture LLC. These reports were prepared in advance of this project review. These evaluations include an updated documentation and evaluation of Capitola Wharf, dated March 4, 2019 and revised April 10, 2019, as well as the associated Capitola Beach Cultural Landscape District Record forms, dated March 1, 2019 and revised April 10, 2019. These evaluations are presented on California Department of Parks & Recreation 523 (DPR523) Forms.

Schematic design sketches for future alterations had been provided for comment November 2018. Possible materials options were initially presented by the City and its engineering consultants, Moffatt & Nichol, in photographs and online links in June of 2019. Ms. Dill reviewed the plan sketches and documentation as forwarded, read online sources about the rehabilitation of other historic structures, and referred to Preservation Brief 16: The Use of Substitute Materials on Historic Building Exteriors.1 The alternative materials were reviewed as presented; no field research was undertaken to view these alternative materials in person. A memorandum was prepared by Leslie Dill, dated June 6, 2019, providing initial review of the design information. Character-defining features were explained, and recommendations were outlined. In addition to this written report, a series of telephone meetings were conducted where the materials alternatives were presented to Leslie Dill for her greater understanding and where additional clarifications in the drawing set were requested by Ms. Dill. The wharf was damaged by surf action early in 2020, accelerating the need for repairs and improvements, in advance of the implementation of a larger alteration plan per the 2018 sketches.

The plans reviewed consist of seven sheets (G-001 and C-100 through C-104 and C-121), dated “saved” March 18, 2020. They were accompanied by a narrative report titled “Capitola Wharf Existing Pilings and Proposed Piling Options,” dated March 12, 2020. The nine-page report includes information on potential piling materials for repairs and replacement and includes photographs of similar projects using the alternative materials. The submittal set was prepared by Moffatt & Nichol of Walnut Creek, California.

Research of Similar Projects

Historically used wood piles coated in creosote are not currently presented as an option because of the adverse environmental impact of the coating. This material is a significant character-defining feature of the wharf and other marine structures of the past. The material provides a familiar wood appearance that weathers over time in a known way; it provides a tactile surface where it is accessible to passers-by; it provides a scent of creosote that is identifiable to those who have interacted with it in the past; it even creaks and creates a known sonic tone when waves wash over it or when it is touched. The review of alternative replacement materials prompted by environmental concerns represents a loss of historic integrity of material that must be recognized. None of the alternative materials provides a fully compatible result. The substitute materials will be compatible in size, form, and approximate color only. Alternative textures are not fully identified in the application. All options allow the growth of barnacles.

Online research was conducted with the goal of finding examples of project reviews for similar historic rehabilitation projects—the replacement of wood-pile marine structures with alternative materials. Within the constraints of this process and its timeline, the research did not yield results.

---

1 https://www.nps.gov/tps/how-to-preserve/briefs/16-substitute-materials.htm
that provided a review format or documentation of the use of replacement materials for this precise sort of marine project in a historic setting.

Information was sent that includes examples of use of this replacement material at two prominent local sites listed on the National Register of Historic Places: Alcatraz and Fort Mason. A brochure also indicates that the material was used at the Statue of Liberty; however, although at a visually prominent location, it is not clear from the presentation if this use was at a historically contributing element of that site. The two local examples present very compelling evidence that other projects at historically significant structures have utilized fiberglass resin composite material in their marine repair projects. One thing observed in these photographs—and noted in online literature—is that the replacement material is not being used to replace all the wooden structural piles, but, rather, they are being used as fender pilings while the wood piles remain intact within the inner structure of the piers.

The literature shows the replacement material being a similar size and installation with regard to traditional wood piles. The piling brochure provided in 2018 included many photographs that show the replacement piles in use. In a few of the photographs, the piles could be seen to be shiny and exhibiting a very “plastic” appearance. In phone meetings with the engineering team and City of Capitola staff, it was presented that none of the alternative coatings were known to have a textured finish, but it was believed that the finish could be matte, and all options would have a somewhat smooth appearance. The color options page (Page 20) from a technical brochure, Creative Pultrusions (CP) Product Brochure “Superpile® Fiberglass Reinforced Polymer (FRP) Pipe Piles,” states that a polyurethane coating could have a “textured architectural appearance.” A textured appearance is preferable to smooth, as the texturing would provide a more compatible visual appearance with the historic material. That page is attached to this report. It is recommended in this report that textures and finishes be presented during future review of the project by the City of Capitola, with alternatives presented as available.

Per the Tech Brief 16, “Growing evidence indicates that with proper planning, careful specifications and supervision, substitute materials can be used successfully in the process of restoring the visual appearance of historic resources.” Fiberglass reinforced replacement building elements are regularly used in locations that are visible at a distance, such as cornices, trim, etc. The Tech Brief concludes: “Substitute materials must meet three basic criteria before being considered: they must be compatible with the historic materials in appearance; their physical properties must be similar to those of the historic materials, or be installed in a manner that tolerates differences; and they must meet certain basic performance expectations over an extended period of time.”

The construction capabilities of the alternative materials are not the purview of this review; however, it is important to reiterate that wooden piles are not being considered. Of the alternatives, the HDPE piles cannot be pile driven, so are not a preferred alternative for engineering reasons. The Timber/poly design with spray coating also has issues with regard to wear and environmental issues. The composite piles are highly preferred for engineering and environmental reasons.

Disclaimers

This report addresses the project plans and materials in terms of historically compatible design of the exterior of the historic structure and its setting. The consultant has not undertaken and will not undertake an evaluation or report on the structural conditions or other related safety hazards that might or might not exist at the site and building, and the consultant will not review the proposed project for structural soundness or other safety concerns. The consultant has not undertaken analysis of the site to evaluate the potential for subsurface resources.
Qualifications

Leslie A. G. Dill, Partner of Archives & Architecture LLC, has a Master of Architecture with a certificate in Historic Preservation from the University of Virginia. She is licensed in California as an architect. Ms. Dill is listed with the California Office of Historic Preservation as meeting the requirements to perform identification, evaluation, registration, and treatment activities within the professions of Historic Architect and Architectural Historian in compliance with state and federal environmental laws. The state utilizes the criteria of the National Park Service as outlined in 36 CFR Part 61.

RESOURCE AND PROJECT

Status of the Resource

Capitola Wharf was evaluated in a 2019 DPR523 form as follows:

Capitola Beach has been identified as a potential historic resource, eligible for the California Register under Criterion (1) and the National Register under Criterion (A), as it is associated with and represents events that have made a significant contribution to the broad patterns of local and regional history. The beach and its contributing structures embody a cultural landscape, a combination resource of natural and human-designed elements. Capitola Beach represents the history of commerce and recreation in the community of Capitola and to the tourists who visit, and the Wharf, at over 160 years old, can be considered a contributor to the historic narrative by illustrating the significant human intervention that is a theme in the history of Capitola Beach. The Wharf represents the different phases of the Capitola Beach history, including being used for shipping in the mid-1800s, being used for commercial fishing from the 1870s until the 1920s, and being used for sport fishing and recreation from the 1920s until the present. As a historic built structure that helps physically and visually maintain a cultural landscape, the Capitola Wharf is a contributing element of the beach and its significance over time...
In 1986, with limited documentation, the Capitola Wharf was listed as a significant local resource by the City of Capitola; that listing would establish it as a historic resource under the California Environmental Quality Act. Per the integrity analysis on the previous page, although heavily physically altered since its listing, the Wharf continues to maintain associations with its historical narrative and visually embodies its historical significance. Capitola Wharf is a prominent landmark in the City of Capitola, and it can be considered eligible for the California Register under Criterion (I) and the National Register under Criterion (A).

Character of the Capitola Wharf

The March 2019 description of Capitola Wharf from the DPR523 included a list of character-defining features as follows:

- Its location and orientation, including its direct connection to the end of Wharf Road
- Its visually abundant round wooden piles, some in a regular pattern and some irregular
- Its continuous-height wood-plank deck, at the height of the end of Wharf Road
- Its narrower entrance width and wider end (altered to this design in the 1950s)
- The inclusion of hoists and other technical boating and fishing equipment

The character-defining features of the Capitola Wharf include both visual appearance from afar and the experience at the beach level, directly underneath the wharf structure.

This review keeps in mind that the structure has been repaired and altered multiple times over the years using predominantly in-kind materials and conventional structural systems. The historic integrity of the structure was described as follows:

Although altered and rebuilt multiple times after years of exposure to wave and tidal damage, the Capitola Wharf retains much of its historic integrity per the National Register’s seven aspects of integrity and continues to serve as a visual, functional, and recognizable part of Capitola Beach. Because long-term weathering and storm damage have prompted repair and replacement of the Wharf’s piers and decking multiple times, its materials and workmanship are not readily identifiable as historic; however, the structure continues to be built of timber and display round-wood pilings related to the structural design of the past. Capitola Wharf has historical integrity with its location and setting at Capitola Beach and extending into Monterey Bay. It retains visual associations with the establishment of shipping in the Early American era and commercial and recreational fishing for over a century, and it conveys a feeling of its age and continued use over time. Per the California Register definition of integrity, the Capitola Wharf conveys adequate historic authenticity. It serves to preserve the relationship of the beach to the commercial shipping and fishing industries of Capitola’s past.

Capitola Wharf is identified, also, as a contributing structure to the identified Capitola Beach Cultural Landscape District. The introductory paragraph of the Significance section of the District Record DPR523 forms for Capitola Beach Cultural Landscape District describes the larger setting of the wharf in Capitola’s past:

Capitola Beach is a human-altered and maintained natural place significant to the historical development of the City of Capitola. As highlighted in the City of
Capitola Historic Context Statement by Carolyn Swift (Context Statement), Capitola Beach has been a focal point of historic commerce and recreation in the City of Capitola and region for well over one hundred seventy years. The narrative of Capitola Beach is a blend of natural beauty—the sand, the bluffs, the bay, the river—and human enterprise—shipping, fishing, tourism, and entertainment. The story of Capitola is the story of forming and reforming the beach and lagoon seasonally, as well as planning for, and recovering from, storms and tides, as well as from nearby engineering projects.

The beach's significance to the City and region is presented as follows:

Although the city boundaries also include late-twentieth-century shopping centers and residential areas outside the village, Capitola Beach is the primary scenic, cultural, and tourist focus of the City of Capitola since the 1860s. The history of the city centers around the cove and its use for commerce and recreation. Commerce has included uses for shipping and transit, but over time has included holiday resort accommodations—including camps, cabins, and hotels, recreational and entertainment enterprises—including bowling, movie houses, nightclubs, water sports and boating, fishing, and retail and restaurant buildings. All these businesses have relied on and been enriched by the sandy cove at the mouth of the Soquel River. Capitola Beach is significant for its role in the development of the city, and it is embodied in the physical boundaries and engineering structures that have enhanced and altered its natural beauty for human use. Capitola Beach is eligible for the National Register of Historic Places under Criterion (A) and for the California Register of Historical Resources under Criterion (I), for its representation of local and regional patterns of history.

Summary of Proposed Project Scope

The scope of work is outlined in the Key Notes on Sheet C-100, as follows (presented herein by whether the work item is a new addition or a repair):

New additions or alterations to existing features:

- Widen Existing wharf Trestle
- Construct [prefabricated] restroom building at foot of wharf.
- Construct [prefabricated] restroom building near restaurant building.
- Install vehicle runners on top of decking from Bent 1 to Bent 50.
- Construct security gate to match (E).
- Modify entry gate to match style of (E).
- Relocate existing utilities to top of outrigger deck on west side.

Proposed repairs or replacements of existing features:

- Replace decking along entire wharf outside of building footprints.
- Repair steel piles at south end of wharf.
- Replace/Repair damaged timber piles.
SECRETARY OF THE INTERIOR’S STANDARDS REVIEW

The Secretary of the Interior's Standards for the Treatment of Historic Properties - Rehabilitation Standards (Standards), originally published in 1977 and revised in 1990, include ten standards that present a recommended approach to repair, while preserving those portions or features that convey a resource's historical, cultural, or architectural values. Accordingly, Standards states that, "Rehabilitation is defined as the act or process of making possible a compatible use for a property through repair, alterations, and additions while preserving those portions or features which convey its historical, cultural, or architectural values." Following is a summary of the review with a list of the Standards and associated analysis for this project:

1. “A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces, and spatial relationships.”

   **Analysis:** There is no effective change of use proposed for this public property. Although there is a proposed intensification of use by providing additional restroom facilities and widening the access, these alterations have required only moderate changes to the “distinctive materials, features, spaces, and spatial relationships.” The use is consistent with its historic use as a contributing structure to Capitola Beach, as well.

2. “The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.”

   **Analysis:** The character-defining features of the Capitola Wharf are included in both its visual appearance from afar and the experience at the beach level, directly underneath the wharf structure.

   Much of the primary historic character, massing, and spatial relationships of the resource are proposed for preservation in this project: Its location, orientation, use, and inclusion of hoists and other technical equipment will be unchanged. The continuous-height wood-plank deck will be replaced in-kind. Although proposed for widening, the wharf will continue to have a narrower entrance width and wider terminus. Its visually abundant round wooden piles will be preserved, and new piles will be added; no pile locations are proposed for permanent removal. (See also Standard 5)

   In this project, the beach-level experience will be altered by the widening of the access, shading and covering more sand area. This change in size, increasing the width by 16 feet (an addition of 80% to the current width), seems in proportion to the height of the visible piles above average sand level and in keeping to the openness of the structural system overhead. The added width would continue to allow a perception of light and air from underneath the structure; views would persist to the water and to the sides. The changes can be found compatible with the character of the historic wharf. (See Standard 9 for the review of introduction of an alternate material for the new piles.)

3. “Each property will be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or architectural elements from other historic properties, will not be undertaken.”

   **Analysis:** All new elements have adequate differentiation and would not create a false sense of historical development. The proposed use of new structural materials differentiates the new area of the wharf from the existing area (See also Standard 9). The restrooms are
proposed to be modern in design and materials, so would not be mistaken for historic elements.

4. “Changes to a property that have acquired historic significance in their own right will be retained and preserved.”

Analysis: No changes to the structure have yet been identified as having acquired historic significance in their own right. All elements are reviewed in this report as a single composition.

5. “Distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize a property will be preserved.”

Analysis: The identified distinctive materials, features, and finishes that identify the structure are shown as substantially preserved on the proposed drawings. In this proposed project, the existing wood piles are preserved. Only a very small number of piles, under the wider terminus area, are proposed for replacement or for repair with new materials (See Standard 6). The wood deck is proposed for replacement in kind (See also Standard 6). There are no other distinctive character-defining materials or artisanship proposed for alteration in this project. (See also Standard 2)

6. “Deteriorated historic features will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature will match the old in design, color, texture, and, where possible, materials. Replacement of missing features will be substantiated by documentary and physical evidence.”

Analysis: The scope of repair and replacement of existing features includes the replacement of the decking, the repair of the steel piles, and the repair and replacement of damaged timber piles.

The structural and decking components are identified as Douglas fir, to match “in kind.” This repair is compatible with this Standard.

The replacement and repair materials for the existing damaged and worn piles within the existing wharf area will not match in materials. The replacement materials are proposed to be similar in dimension, layout, and color of the historic pier, especially as viewed from afar, preserving the design and color of the wharf structure. The replacement piles are primarily nearer the wharf terminus, not accessible by pedestrians using the beach, but need to be found visually compatible. It is recommended that the finish of the material be reviewed as a part of the City of Capitola permitting process and that the finish and texture be presented for review, with alternative colors, finishes, and textures presented for review as available.

Note: The steel piles are not identified as character-defining features; the repair of these elements with new materials can be considered compatible with the materials and dimensions of these existing piles, as the materials are considered compatible with the overall design of the adjacent character-defining materials.

7. “Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.”

Analysis: No chemical or physical treatments (such as epoxy consolidation or painting) are shown as proposed in this project, and none are expected.
8. “Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.”

Analysis: Archeological resources are not evaluated in this report.

9. “New additions, exterior alterations or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work shall be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.”

Analysis: The proposed project includes a widening of the trestle/accessway, the installation of two new restroom facilities, the alteration of the security gates and entrance gates, and the installation of wood vehicle runners on top of the deck.

The wharf footprint has changed many times through its history. Its length and width have both been altered, as has the deck and access (rail, car, foot). The general configuration of a narrow “trestle” portion that leads to a wider/larger deeper-water access area has been established as a character-defining feature. The addition of width to the current footprint will include a mix of traditional and new materials. The deck and upper structure will be wood, and the support piles are proposed to be a composite fiberglass reinforced with a plastic exterior sleeve. This mix of materials provides a clear understanding of the location of the addition adjacent to the twentieth-century wood structure. Differentiated by its base supports, it is otherwise proposed to be compatible in size, height, scale, proportion, and materials. (See also Standard 2)

It is understood that the prefabricated restroom facilities illustrated in the drawing set may not be the final model bid or provided in the construction phase of work. The current design is compatible with this Standard, as it is compatible for its use of repetitive slats of vertical wood siding and for its compact, utilitarian massing. The design is differentiated by its contemporary flat roof and exposed stainless-steel components. It is recommended that the design of the prefabricated restroom units be reviewed by the City of Capitola for compatibility with the Standards as a part of the future development of the bidding and acquisition phases of work, prior to City of Capitola permits and prior to installation.

The current project drawings do not include detailed design plans elevations, detailing, or materials for the new or altered security gates. It is understood that this design will be developed in the future. It is recommended that the design be reviewed by the City of Capitola for compatibility with the Standards in materials, scale, size, connection, etc., when the design is available, and prior to City permitting.

The current project drawings do not include detailed design plans or elevations for the altered entrance gates. It is understood that this design will be developed in the future. It is recommended that the design of the entrance gates be reviewed by the City of Capitola for compatibility with the Standards in materials, scale, size, connection, etc., when the design has been fully developed, prior to City permitting.

The addition of new wood vehicle runners is in keeping with the history of changing use of the Capitola Wharf. The materials and scale are compatible with the character of the historic resource. They are differentiated by their perpendicular installation and use.

Note: The relocation of the utilities has been presented within the drawing set as notes only. It is assumed, for the purposes of this review, that this alteration will affect only non-character-defining features and will not, for example, include new large structures such as utility boxes or shed-sized buildings.
10. “New additions and adjacent or related new construction will be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.”

**Analysis:** The proposed design would preserve the essential form and integrity of the historic property. The significant character-defining features of the Capitola Wharf would remain substantially unimpaired in this project.

**INTEGRITY ANALYSIS**

Historic integrity analysis is a component of the design review process. Integrity analysis is tied into the criteria for National Register and California Register eligibility. A project that might impact the integrity of a historic resource could impact the significance of that resource. According to the California Office of Historic Preservation Technical Assistance Series #6:

*Integrity is the authenticity of a historical resource’s physical identity evidenced by the survival of characteristics that existed during the resource’s period of significance. Historical resources eligible for listing in the California Register must meet one of the criteria of significance described above and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Historical resources that have been rehabilitated or restored may be evaluated for listing. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association [emphasis added]. It must also be judged with reference to the particular criteria under which a resource is proposed for eligibility. Alterations over time to a resource or historic changes in its use may themselves have historical, cultural, or architectural significance.*

The following analysis is intended to address how the proposed repair, rehabilitation and addition project might potentially preserve or impact the historic integrity of the contributing subject property and the surrounding cultural landscape district. The analysis utilizes the seven aspects of historic integrity indicated by the National Register and State of California’s definition of authenticity of a resource.

**Location:** The location of the contributing historic resource is proposed to remain as-is. The historic integrity of location of the Capitola Wharf as an individual historic resource and a contributor to a historic cultural landscape would be fully preserved within this proposed project.

**Setting:** There is no clearly identifiable immediate setting of the wharf (e.g., there is no associated landscaping or related structures directly adjacent to the wharf, and there are no constraining elements that provide a setting of scale or dimension other than the connection of the wharf to the end of Wharf Road. There is no proposed alteration of the connection of the wharf to the road. The setting of the wharf itself would be preserved.

The integrity of the historic “setting” is also related to the project’s potential impact on the character or quality of the identified Capitola Beach Cultural Resource District and the other Capitola Beach contributors, as well as the visual impacts of the structure on the setting of other nearby historic resources. The expansion of the wharf’s width represents a slight impact on the setting of the beach by covered more sand area; however, this is a minor alteration with little discernable impact on the perception of the size or quality of the beach with regard to its historic integrity of setting. The height, length, plan, materials, and other qualities are substantially...
preserved; therefore, the integrity of the Capitola Beach Cultural Landscape District setting, and the setting of adjacent resources, is not substantially impacted.

**Design:** The project would preserve much of the historic design integrity of the Capitola Wharf. The proposed design would preserve the visual appearance of the long deck, the multiple round support piles, and the cluster of buildings and equipment at the foot and the terminus of the pier. Although widening the accessway, this area would remain narrower than the ending area, a character-defining feature of the wharf design. The design as a contributing element of the cultural landscape would be preserved. The long deck and abundant piles would be visible from throughout the larger cultural landscape and city.

**Materials:** Because of the age and nature of the resource and its harsh environment, no existing materials are identified as original to the nineteenth or early twentieth centuries; however, it is understood that they represent the slow evolution of similar replacement materials used over the history of the resource. The decking and above-water features are proposed to match the existing materials. The replacement and repair of some piles that support the existing wharf area will also consist of new materials. The project shows the introduction of entirely new materials to support the new addition along the accessway portion of the wharf. These are differentiated per the Standards, but reasonably compatible in size, form, and connection, although not yet known to be compatible in texture or finish. There will be a loss of integrity of materials, but it is proposed to be minimized in this project.

**Workmanship:** The historic integrity of workmanship has already been lost. The proposed project does not impact this aspect of integrity.

**Feeling:** After the proposed alterations and addition, the historic resource would continue to convey a feeling of a historic utilitarian marine structure of long-time use.

**Association:** Per the Capitola Wharf evaluation, “Capitola Beach represents the history of commerce and recreation in the community of Capitola and to the tourists who visit, and the wharf, at over 160 years old, can be considered a contributor to the historic narrative by illustrating the significant human intervention that is a theme in the history of Capitola Beach. The wharf represents the different phases of the Capitola Beach history, including being used for shipping in the mid-1800s, being used for commercial fishing from the 1870s until the 1920s, and being used for sport fishing and recreation from the 1920s until the present.” These significant associations of the resource would be preserved and continued with this new project.

**Integrity Analysis Summary:** Substantial integrity of location, setting, design and feeling would remain. The integrity of materials has changed over the years, but the preservation or in-kind replacement of the decking, upper structural elements, and the continued use of the vast majority of the existing wood piles can be considered consistent with the original wooden resource. The introduction of new materials is proposed in a way compatible with the historic significance, without significant impact on the historic integrity. The integrity of workmanship has already been lost. The integrity of association would be maintained. The authenticity of the property would be preserved with this Capitola Wharf Resiliency and Public Access Improvement Project.

**RECOMMENDATIONS AND CONCLUSION**

**Recommendations**

Because of the public bidding process, some elements of the proposed project were not able to be presented with full specifications, drawings, or notations that address potential historic compatibility and potential impacts. These elements of the design are separate and distinct, and their design is recommended for future review as a part of the City of Capitola project approval.
process. It was suggested that these elements be conditioned for approval, based on additional design review by the City, including public hearings, prior to issuance of the building permit. The detailing and materials of these specific elements should be reviewed for compatibility with the Secretary of the Interior’s Standards for the Treatment of Historic Properties.

It is recommended, therefore, that the following elements be conditioned for approval, based on future City of Capitola design review and approval:

- Compatible texture and finish of proposed exterior of the new piles and repaired piles
- Compatible design, scale, materials, location, etc., of the prefabricated restrooms
- Design, scale, materials, etc., of the altered entrance gates: scale, materials, etc.
- Design, scale, materials, etc., of the new security gates

**Conclusion**

With the recommended future review of four components of the design, the *Capitola Wharf Resiliency and Public Access Improvement Project*, as currently presented, is substantially compatible with the Secretary of the Interior’s Standards for the Treatment of Historic Properties. The project can be found to preserve substantially the historic integrity of the historic resource and of the identified Capitola Beach Cultural Landscape District.

As conditioned for approval, the proposed project can be found to be mitigated to a less-than-significant impact on the historic resource and its surrounding identified cultural landscape per the California Environmental Quality Act.

COLOR OPTIONS

The standard color of the FRP pile is black. Custom colors are available upon request. CPI recommends that a UV protection layer be incorporated onto the pile surface if the pile is exposed to UV light and the application is architectural or cosmetic.

The UV protection is available in the form of a paint or polyurethane coating or in the form of a high density polyethylene sleeve.

Polyurethane coatings have an advantage as they provide UV and abrasion protection while exhibiting a textured architectural appearance. Polyurethane and paint coatings are offered in various colors. Consult the factory and talk to a representative to determine the best UV protection option for your installation.

BEARING AND DOCK PILES

SUPERPILE® is used extensively for bearing pile applications. The SUPERPILE® can be utilized hollow or concrete filled depending on the strength and stiffness requirements for your application.

Engineers and owners are discovering the benefits of using FRP piles in the splash zone. This exercise will significantly increase the service life of your structure.

As an example, after Hurricane Sandy, the Federal Highway Administration (FHWA) replaced the visitor and service docks on Liberty Island, NY with new docks made of FRP and wood. The FHWA engineers specified polymer piles to be used for the bearing piles in order to increase the service life of the structure. The piles were driven to refusal and filled with concrete. The dock structure was erected and the wood plank decking attached.

Another example of engineers and owners taking advantage of FRP materials involves the construction of an all composite fire boat dock in Jacksonville, Florida. The dock was designed for a category three hurricane direct hit, as the structure is critical for the fire department rescue team.

SUPERPILE® supports the boat lift. The substructure is made of FRP pultruded channels and beams that support the pultruded grating walkway that extends from the firehouse to the boat lifts.
NOTICE OF INTENT TO ADOPT A MITIGATED NEGATIVE DECLARATION

TO: Interested Parties
FROM: City of Capitola Community Development Department
DATE: April 6, 2020
SUBJECT: Capitola Wharf Resiliency and Public Access Improvement Project

PROJECT DESCRIPTION
The proposed Project would increase the resiliency of the Capitola Wharf (Wharf) and improve public safety by expanding a section of the Wharf’s existing narrow trestle system and by completing necessary repairs. The Project would also provide improved public access with an expanded bridge deck that reduces pedestrian and vehicular conflicts and by constructing two new restroom facilities for beach and Wharf users.

Environmental Determination: An Initial Study (IS) was prepared to examine potential areas of impact resulting from the proposed Project. The IS found that the proposed Project would not have a significant effect on the environment with compliance with required regulatory permit conditions and with the required implementation of mitigation and avoidance measures to protect biological resources, cultural resources, water quality and noise. As a result, an Environmental Impact Report (EIR) is not required and a Mitigated Negative Declaration (MND) has been prepared.

Availability of Documents: The IS/MND will be made available for public review by April 9, 2020. Due to the City’s recent closure of the Community Development Department in response to the “coronavirus” or “COVID-19”, the document has been made available electronically. A PDF digital file of the IS/MND is available upon request from the Planning Division at kmozumder@ci.capitola.ca.us. The IS/MND can also be found at the City’s website (https://www.cityofcapitola.org/publicworks/page/projects-capital-improvement-program-0) or at the CEQAnet website (https://ceqanet.opr.ca.gov/).

Comments on the Initial Study/Mitigated Negative Declaration: The City requests any comments you may have on the IS/MND during a 30-day review period, which commences on April 9, 2020 and ends on May 9, 2020. Please submit any comments you may have in e-mail by the end date listed above to:
