Subject: wharf restrooms

Planning Commission,

After thinking about the wharf restrooms since my previous email about supporting Option 2, I'd like to offer a different suggestion -

Have a local architect (not Fuse, we don't need another modern box) to design a bathroom facility that reflects the style and architecture of Venetian Court. Such a design would reflect the history of Capitola and compliment the area with a design that would reflect the historical nature of Venetian Court. It might cost more but would add to the character of the wharf and Village, character which seems to be slowly disappearing with each new project.

Subject: Wharf restrooms

In the late '90's, the City Council turned down a grant to build restrooms on the foot of the wharf, worrying about it "blocking views". Easily accessible restrooms on the wharf are long overdue. Option two pictured below is the best choice for the wharf restrooms. While it would be better to be more creative and have a design more reflective of the historical character of a fishing wharf, of the choices offered this is the best.
